Antidepressants and Receptor Function

Ruth Porter, Gregory R. Bock, Sarah Clark, 2008-04-30 Ciba Foundation Symposium 123 Antidepressants and Receptor Function Chairman Dennis Murphy 1986 Depression is a common and often debilitating affective disorder Attempts to develop effective antidepressants have a long history but many questions remain about the mechanisms of action of such treatments and about the aetiology and pathophysiology of depression itself Early observations centred attention on central monoamine systems and animal studies suggested that changes in beta adrenoceptor responsiveness were a common effect of antidepressant therapies More recent research has encompassed many different central and peripheral receptors time dependent adaptational events at synapses and the functional significance of changes in neurotransmitter systems in both humans and experimental animals Such pharmacological studies aimed ultimately at elucidating the neurochemical basis of depression and of promoting new therapeutic approaches provide the focus of this symposium volume Many different methods of investigating the links between monoamine systems depression and antidepressant treatments are described Recent studies of receptors and of monoamine uptake sites in the brain and the periphery e g in platelets and fibroblasts are reviewed with emphasis on alpha and beta adrenoceptors 3H imipramine binding sites and serotonin receptors The results of monitoring amine metabolites in cerebrospinal fluid and of measuring neuroendocrine physiological and behavioural responses to pharmacological challenge are presented providing information on monoaminergic function in depressed patients and experimental animals before during and after treatment with antidepressant drugs or electroconvulsive shock Genetic influences on receptor density are also discussed as is the relevance to human depressive illness of animal models including stress induced behavioural depression in rats and responses to social stressors in rhesus monkeys This book should be of interest to neuropharmacologists psychopharmacologists clinical pharmacologists behavioural scientists psychiatrists

and neuroscientists *Herbal Treatment of Major Depression* Scott D Mendelson, 2019-10-16 This unique volume presents new understandings of the neurochemical nature of major depression and how herbs and their constituent flavonoids and terpenes appear to address some of the mechanisms now thought to be involved It explores how recent studies of the rapid antidepressant effects of ketamine inform neuroscientists about deep intracellular mechanisms of antidepressant action that have little to do with simple enhancement of monoaminergic activity These mechanisms include actions on PI3K Akt mTOR GSK3 BDNF and other intracellular pathways New theories of the pathophysiology underlying major depression such as oxidative damage inflammation stress and insulin resistance are then explored Key Features Focuses on oxidative damage inflammation and metabolic syndrome Explains that a significant percentage of people treated for major depression obtain little if any relief from standard antidepressant medications These facts lead to discussion of herbs that can be used to treat major depression as well as consideration of the scientific basis for how these herbs act The antidepressant properties of 66 herbs are discussed along with dosing and safety information *A Pharmacological Study of the Anti-muscarinic Actions of Several Antidepressants* Chung Chinn, 1970 Antidepressants B. E. Leonard, 2001 Important clinical issues as the outcome of long term treatment with antidepressants the time of onset of the antidepressant response and the limitations of the antidepressants currently available are covered in this monograph Leading researchers in the area of clinical and experimental psychopharmacology critically assess the progress in their specialist fields The mechanisms of action of antidepressants are considered followed by clinical research into the role of the hypothalamic pituitary adrenal axis and the immune system in the biology of depression and in response to treatment The final chapter deals with the important chemical entities now undergoing development as antidepressants The purpose of this monograph is not only to inform but also to stimulate research into the biology of depression and the mechanisms behind the action of effective antidepressants This monograph is of interest to psychiatrists psychologists pharmacologists neuroscientists and endocrinologists *St. John's Wort and its Active Principles in Depression and Anxiety* Walter E.
