The health of our global environment is increasingly affected by our technological advance: rain, rivers, lakes, forests, soil, climate all suffer at human hands. Laura and Cotton suggest that the society committed to the technological transformation of the natural environment into an artificial one is also paradoxically a society committed to its own destruction. Currently one of the major concerns of environmental education is to address this problem more concertedly than hitherto. This book represents a radical departure from the traditional approach to environmental education. It argues that the knowledge base behind current teaching is flawed and the resulting mind sets and attitudes are often counterproductive to the aims of environmental education. **Reason and Education** H. Siegel, 2012-12-06

Israel Scheffler is the pre-eminent philosopher of education in the English speaking world today. This volume collects seventeen original invited papers on Scheffler's philosophy of education by scholars from around the world. Each paper is followed by a response from Scheffler himself. The collection is essential reading for anyone concerned with contemporary scholarship in philosophy of education or with the place of this singularly important author in it. **Key Concepts in the Philosophy of Education**

Schools and Public Health Michael Gard, Carolyn Pluim, 2014-06-18. Schools and Public Health is a meditation on the past, present, and future of the relationship between public health and American public schools. Gard and Pluim begin by developing a historical account of the way schools have been used in the public health policy arena in America. They then look in detail at more contemporary examples of school-based public health policies and initiatives in order to come to a judgment about whether and to what extent it makes sense to use schools in this way. With this as the foundation, the book then offers answers to the question of why schools have so readily been drawn into public health policy formulations. First seeing schools as a kind of miracle factory is a long-standing habit of mind that discourages careful consideration of alternative public

health strategies Second schools have been implicated in public health policy in strategic ways by actors often with unstated political cultural ideological and financial motivations Finally the authors call for a more sophisticated approach to public health policy in schools and suggest some criteria for judging the potential efficacy of school based interventions In short the potential effectiveness of proposed interventions needs to be assessed not only against existing historical evidence but also against the competing roles society expects schools to play and the working life realities for those charged with

implementing public health policies in schools Current Awareness in Health Education ,1980-07 **Science Teaching**

Michael R. Matthews,2015-12-22 Science Teaching argues that science teaching and science teacher education can be improved if teachers know something of the history and philosophy of science and if these topics are included in the science curriculum The history and philosophy of science have important roles in many of the theoretical issues that science educators need to address what constitutes an appropriate science curriculum for all students how science should be taught in traditional cultures how scientific literacy can be promoted and the conflict which can occur between science curriculum and deep seated religious or cultural values and knowledge Outlining the history of liberal approaches to the teaching of science Michael Matthews elaborates contemporary curriculum developments that explicitly address questions about the nature and the history of science He provides examples of classroom teaching and develops useful arguments on constructivism multicultural science education and teacher education **Healthcare in Children's Media** Naomi
