H. George,2015-07-30 Originally published in 1981 this book was an attempt to bridge the gap between scientists and philosophers by viewing philosophy at least in part through scientific eyes Professor George is not here concerned with the philosophy of science Rather he is looking at classical philosophical issues from the behavioural or scientific viewpoint Thus from the perspective of science he attempts to establish an understanding of philosophy The author intended it primarily for behavioural scientists systems theorists and cyberneticians of the time who should have been closely bound up with the philosophical scientific relationship

Current Topics in Cybernetics and Systems J. Rose,2012-12-06 This book is a record of the contents of the papers accepted by the Congress Committee for presentation at the Fourth International Congress of Cybernetics and Systems Amsterdam The Netherlands 21 25 August 1978 Two hundred and forty five papers from authors from thirty three countries of all the five continents are included The papers are presented in an abridged form in order to highlight the main themes and produce a book that is both readable and relatively inexpensive It was felt that after the publication of the weighty and rather costly form of the Proceedings of the Third International Congress of Cybernetics and Systems held in Bucharest

Romania in 1975 Modern Trends in Cybernetics and Systems eds Rose and Bilciu W O G S c and Springer Verlag 1977 3 volumes about 3500 pages 150 an abridged but comprehensive version would be more acceptable to readers It is worth noting that the full names and addresses of authors are given for each paper and requests to authors for more information and even full scale papers would produce a positive response As a matter of interest each paper carries in addition brief summaries The papers are arranged in each section or symposium in the alphabetical order of authors names this is not necessarily the order of presentation at the Congress

Cybernetic Revolutionaries Eden Medina, 2014-01-10 A historical study of Chile's twin experiments with cybernetics and socialism and what they tell us about the relationship of technology and politics In Cybernetic Revolutionaries Eden Medina tells the history of two intersecting utopian visions one political and one technological The first was Chile's experiment with peaceful socialist change under Salvador Allende the second was the simultaneous attempt to build a computer system that would manage Chile's economy Neither vision was fully realized Allende's government ended with a violent military coup the system known as Project Cybersyn was never completely implemented but they hold lessons for today about the relationship between technology and politics Drawing on extensive archival material and interviews Medina examines the cybernetic system envisioned by the Chilean government which was to feature holistic system design decentralized management human computer interaction a national telex network near real time control of the growing industrial sector and modeling the behavior of dynamic systems She also describes and documents with photographs the network's Star Trek like operations room which featured swivel chairs with armrest control panels a wall of screens displaying data and flashing red lights to indicate economic emergencies Studying project Cybersyn today helps us understand not only the technological ambitions of a government in the midst of political change but also the limitations of the Chilean revolution This history further shows how human attempts to combine the political and the technological with the goal of creating a more just society can open new technological intellectual and political possibilities Technologies Medina writes are historical texts when we read them we are reading history

Organization Paremiology Kofi Kissi Dompere, 2017-02-17 In the Theory of Philosophical Consciencism Professor Dompere establishes how Nkrumah used the theory of categorial conversion housing the necessary conditions of transformation to design strategies for creating the sufficient conditions for socio political transformations The theory of Philosophical Consciencism is about the institutionally destruction creation process for socio political transformation The theory shows the scientific contributions of Nkrumah's thinking to the solution of the transformation problem in science and its application to social systemicity where Nkrumah's analytical weapons were drawn from African conceptual system The theory is developed as logico mathematical foundations that guide the internal management of the command control decision choice systems for creative destruction of socio political varieties in transformations through the development of qualitative mathematics making possible the construct of qualitative equations of motion for connecting varieties in qualitative transfers The qualitative equations of motion through

the Philosophical Consciencism constitute the sufficient conditions for transformations The theory links rationality intentionality experiential information structure defective deceptive information structures in the control dynamic games of power and dominance by the duals and poles under the principle of opposites with relational continua and unity relative to decision choice systems that induce negation negation transformations where paths are established by the history of success failure outcomes in the socially control dynamic zero sum games between the duals in any duality and between the poles of any actual potential polarity The main premise of the monograph is that there exists a set of sufficient conditions in support of the necessary conditions for internal transformation of socio natural varieties The theory is useful in understanding developmental processes and multi polar power zero sum games for global dominance The necessary conditions constitute the natural necessity that constrains cognitive freedom The sufficient conditions constitute cognitive freedom that must overcome the necessity in socio natural systems dynamics Had this conceptual system been familiar to African leaders the African transformation from colonialism to complete emancipation rather than neocolonialism would have been increasingly successful This holds for those seeking triumph over injustices oppression imperialism and social change in all systems

Artificial Intelligence F. H. George, 2018-05-15 Originally published in 1986 in order to probe dispute and analyse the role of artificial intelligence in cybernetic thought and information science the author pursues this topic within its philosophical behavioral and neurophysiological contexts while drawing attention to cognitive issues By elucidating the problems and potential associated with knowledge based systems the book emphasized the need to examine artificial intelligence in its own right

The Science of History William J. Chandler, 1984 **Theories of Knowing and Knowledge Production** Kofi Kissi Domperre, 2024-09-26 The book is devoted to exploring the organizational dimensions of the general space of problem solution dualities within epistemic fields to examine the diversity and unity of knowing and information knowledge production in science and non science and how to account for and explain the forces of variety transformations as induced by decision choice actions in creating the functor space and the space of categorial converters as well as to integrate decision choice qualities of curiosity creativity hope despair success failure and their relationships with epistemic anomalies in the production of intellectual investment flows and capital stocks and the rise and fall of institutions in response to the dynamics of the open space of problem solution dualities with open algorithms under the principle of non satiation The conditions and sources of uncertainties in human actions are traced through the space of ontic epistemic dualities as generated by cognitive capacity limitations leading to the concepts of imagination possibility and probability with corresponding worlds and then

link to the discussions on thinking reasoning processes with goals objectives and visions of education in social set ups The concepts and phenomena of anticipation necessity expectation freedom anomaly curiosity creativity hope despair success and failure contained in the space of imaginations are defined under the concepts of onticity and epistemicity where their roles in the dualistic polar journeys are discussed analyzed and connected to epistemic transversality conditions under the principle of opposites relative to the conditions of input output and cost benefit dualities The book is to fill in some of the important phenomena needed in my investigation of theory of knowing as a production of intellectual investment flows and information knowledge accumulation as the production of intellectual capital stocks relative to the disequilibrium dynamics of human intellectual heritage based on fuzzy paradigm of thought thus providing an added foundation in integrating subjective elements into the development of open artificial intelligence where cost benefit values operate to determine varieties over the spaces of true false and yes no dualities in machine learning

Cybernetics and the Philosophy of Mind Kenneth Sayre, 2014-11-20 This book published in 1976 presents an entirely original approach to the subject of the mind body problem examining it in terms of the conceptual links between the physical sciences and the sciences of human behaviour It is based on the cybernetic concepts of information and feedback and on the related concepts of thermodynamic and communication theoretic entropy The foundation of the approach is the theme of continuity between evolution learning and human consciousness The author defines life as a process of energy exchange between organism and environment and evolution as a feedback process maintaining equilibrium between environment and reproductive group He demonstrates that closely related feedback processes on the levels of the behaving organism and of the organism's nervous system constitute the phenomena of learning and consciousness respectively He analyses language as an expedient for extending human information processing and control capacities beyond those provided by one's own nervous system and shows reason to be a mode of processing information in the form of concepts removed from immediate stimulus control The last chapter touches on colour vision pleasure and pain intentionality self awareness and other subjective phenomena Of special interest to the communication theorist and philosopher this study is also of interest to psychologists and anyone interested in the connection between the physical and life sciences

The Nature of the Machine and the Collapse of Cybernetics Alcibiades Malapi-Nelson, 2017-07-03 This book is a philosophical exploration of the theoretical causes behind the collapse of classical cybernetics as well as the lesson that this episode can provide to current emergent technologies Alcibiades Malapi Nelson advances the idea that the cybernetic understanding of the nature of a machine entails ontological and epistemological consequences that created both material and theoretical conundrums However he proposes that given our current state of materials research scientific practices and research tools there might be a way for cybernetics to flourish this time The book starts with a historical and theoretical articulation of cybernetics in order to proceed with a philosophical explanation of its collapse emphasizing the work of Alan Turing Ross Ashby and John von Neumann Subsequently Malapi Nelson unveils the

common metaphysical signature shared between cybernetics and emergent technologies identifying this signature as transhumanist in nature Finally avenues of research that may allow these disruptive technologies to circumvent the cybernetic fate are indicated It is proposed that emerging technologies ultimately entail an affirmation of humanity

Control Systems: A Historical and Philosophical Perspective Ali Khaki-Sedigh, 2025-07-02 This book offers an exploration of the historical and philosophical aspects of the field of control systems engineering By examining the historical and philosophical underpinnings of control systems this book provides a holistic understanding of the challenges faced by control engineers and the need for a multidisciplinary approach Written for engineers scientists and students this book delves into the evolution of control systems theories from ancient times to the present day highlighting the key contributions of influential thinkers and innovators The book also explores how philosophical concepts such as induction falsification and process philosophy have shaped our understanding of control systems The book s unique approach combines historical narratives with philosophical perspectives to provide a deeper understanding of the field By examining the historical development of control systems you will gain insight into the motivations and technological constraints that have influenced the evolution of control systems analysis and design methodologies From the early applications of automation to modern and postmodern control systems which rely on sophisticated algorithms and artificial intelligence this book provides a comprehensive understanding of the field s progress The book concludes by examining the future of control systems through the perspectives of leading control scientists and engineers This comprehensive approach will equip the reader with a deeper understanding of the field to tackle complex problems in control systems analysis and design
