Research Methods for Student Radiographers Christopher M. Hayre, Xiaoming Zheng, 2021-09-28 This book provides an holistic picture of the application of research in radiography and focuses on multivariant methodological approaches and practices It will provide readers insight into both contemporary and innovative methods within radiography research backed up with evidence based literature This book may also be translated into other health disciplines as it introduces research to the reader by detailing terms that can often be confusing for students These remain central in understanding the importance of research in radiography and how the generation of new knowledge is obtained This will be supported with subsequent chapters concerning the literature formation of research questions and detail the early beginnings of a research proposal Chapters will include a wide range of topics such as quantitative and qualitative methodologies and data collection tools pertinent to radiographic research whilst discussing data analysis and need for rigor The authors draw from our experiences published outputs and clinical work supported with alternate philosophies and methods used in diagnostic radiography Each chapter will examine the multifaceted use and application of each sub theme pertinent to research in radiography which is presented in a single text for students and perhaps practitioners The targeted audience for this book is interdisciplinary but clearly focuses on those studying undergraduate radiography in response to the limited texts available We also anticipate it to provide a useful tool for academics delivering undergraduate radiography programmes and those supporting postgraduate research The key features will explore important research approaches and concepts within diagnostic radiography provide contemporary evidence based practice regarding mixed method approaches provide a how to guide for understanding key research principles in a wide range of radiographic settings evaluate the impact of research on patients and the radiographer patient relationship Dr Christopher Hayre is a Senior Lecturer in Diagnostic Radiography at Charles Sturt University in New South Wales Australia Dr Xiaoming Zheng has been teaching medical radiation science courses at Charles Sturt University since 1998

Arranged by abstract numbers under volumes and years of Nuclear science abstracts. Entries include title in English, author address, bibliographical information, indication of original language and rather lengthy abstract. Subject index. Radiation Protection Gyoujin Cho, 2013-10-02. *Radiation Protection: A Systematic Approach to Safety* is a collection of papers that deals with the control, management and prevention of toxic agents. One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure. Another paper cites the radiation protection aspects practiced in the decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel. One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere. These routes include 1. inhalation of the material from the initial cloud or that arising from the ground, 2. external irradiation from radioactive decay of the material in the cloud or in the air, 3. and as ingestion of radionuclides transferred through the food chain. One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents. The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level. The collection will prove useful for nuclear physicists and scientists, occupational health professionals and researchers in the field of nuclear medicine and engineering.
