Radiation Damage in Metals N. L. Peterson, S. D. Harkness, 1976      *Defects and Radiation Damage in Metals* Michael Warwick Thompson, 2000      *Radiation Damage in Metals* N. L. Peterson, S. D. Harkness, 1976      Fundamentals of Radiation Materials Science Gary S. Was, 2007-07-16 This book is an eye opening treatise on the fundamentals of the effects of radiation on metals and alloys When energetic particles strike a solid numerous processes occur that can change the physical and mechanical properties of the material Metals and alloys represent an important class of materials that are subject to intense radiation fields Radiation causes metals and alloys to swell distort blister harden soften and deform This textbook and reference covers the basics of particle atom interaction for a range of particle types the amount and spatial extent of the resulting radiation damage the physical effects of irradiation and the changes in mechanical behavior of irradiated metals and alloys      Defects and Radiation Damage in Metals M. W. Thompson, 1969 The study of radiation damage in solids generally has been stimulated by the technological demands of nuclear energy and space research Professor Thompson's 1969 book discusses the basic atomic mechanisms which give rise to the main effects induced by radiation in metals since it is in their relatively simple structures that the fundamental processes can be most easily identified The first part of the book describes the nature of lattice defects in metal crystals The presentation leads naturally into the discussion of radiation damage in the second part and recognises the important contribution that the study of irradiated metals has made to our general knowledge of defects The wide coverage of this book includes developments in our understanding of collision cascades of the clustering of point defects and the behaviour of impurities induced by irradiation      **Defects and radiation damage in metals** M. W. Thompson, 1969      The Modelling of Radiation Damage in Metals Using Ehrenfest Dynamics Christopher Race, 2011-01-04 Atomistic simulations of metals under irradiation are indispensable for understanding damage processes at time and length scales beyond the reach of experiment Previously such simulations have largely ignored the effect of electronic excitations on the atomic dynamics even though energy exchange between atoms and electrons can have significant effects on the extent and nature of radiation damage This thesis presents the results of time dependent tight binding simulations of radiation damage in which the evolution of a coupled system of energetic classical ions and quantum mechanical electrons is correctly described The effects of electronic excitations in collision cascades and ion channeling are explored and a new model is presented which makes possible the accurate reproduction of non adiabatic electronic forces in large scale classical molecular dynamics simulations of metals      *Fundamental Aspects of Radiation Damage in Metals*, 1975      **Defects and Radiation Damage in Metals**,      **Radiation Damage in Metals** N.
