**Radiation Effects in Advanced Semiconductor Materials and Devices** C. Claeys, E. Simoen, 2013-11-11 In the modern semiconductor industry there is a growing need to understand and combat potential radiation damage problems. Space applications are an obvious case but beyond that today's device and circuit fabrication rely on increasing numbers of processing steps that involve an aggressive environment where inadvertent radiation damage can occur. This book is both aimed at post graduate researchers seeking an overview of the field and will also be immensely useful for nuclear and space engineers and even process engineers. A background knowledge of semiconductor and device physics is assumed but the basic concepts are all briefly summarized. Finally the book outlines the shortcomings of present experimental and modeling techniques and gives an outlook on future developments.

**Ionizing Radiation Effects in MOS Devices and Circuits** T. P. Ma, Paul V. Dressendorfer, 1989-04-18 The first comprehensive overview describing the effects of ionizing radiation on MOS devices as well as how to design fabricate and test integrated circuits intended for use in a radiation environment. Also addresses process induced radiation effects in the fabrication of high density circuits. Reviews the history of radiation hard technology providing background information for those new to the field. Includes a comprehensive review of the literature and an annotated listing of research activities in radiation hardness research.

**Physics of Radiation Effects in Crystals** R.A. Johnson, A.N. Orlov, 2012-12-02 Physics of Radiation Effects in Crystals is presented in two parts. The first part covers the general background and theory of radiation effects in crystals including the theory describing the generation of crystal lattice defects by radiation, the kinetic approach to the study of the disposition of these defects and the effects of the diffusion of these defects on alloy compositions and phases. Specific problems of current interest are treated in the second part and include anisotropic dimensional changes in uranium, zirconium and graphite, acceleration of thermal creep in reactor materials and radiation damage of semiconductors and superconductors.
