 Radiation Protection A Systematic Approach to Safety is a collection of papers that deals with the control management and
 prevention of toxic agents One paper presents design measures evaluated in a balanced program as a practicable method to
 lessen occupational radiation exposure Another paper cites the radiation protection aspects practiced in the
 decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear
 fuel One paper describes a methodology to evaluate a collective dose of exposure through different routes following the
 release of radioactive material into the atmosphere These routes include 1 inhalation of the material from the initial cloud or
 that arising from the ground 2 external irradiation from radioactive decay of the material in the cloud or in the air 3 and as
 ingestion of radionuclides transferred through the food chain One paper compares the chemical and radiation hazards to man
 using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents
 The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can
 occur at the molecular level The collection will prove useful for nuclear physicists and scientists occupational health

 problems plays an ever increasing role in diagnosis and treatment of disease It is essential that medical physicists have the

 Radiation Protection in Healthcare provides a practical guide for medical physicists and others involved with radiation

protection in the healthcare environment The guidance is based on principles set out in current recommendations of the International Commission for Radiological Protection and methods developed by a variety of professional bodies Written by practitioners experienced in the field this practical reference manual covers both established techniques and new areas of application This new edition has been fully revised and updated to cover new requirements linked to the increased knowledge of radiation effects and the development of new technology Each specialist area is covered in a separate chapter to allow easy reference with individual chapters being assigned to different types of non ionising radiations Tabulated data is included to allow the reader to carry out calculations for situations encountered frequently without reference to further texts

Radiation Protection Jacob Shapiro, 2002 This highly successful manual has served for nearly three decades as the definitive guide to the safe use of radioactive materials Completely revised and updated the fourth edition presents a new dimension by adding coverage of nonionizing radiation and is thus concerned with the entire field of radiation protection The author takes the novel approach of introducing the whole range of energies possessed by particles and electromagnetic waves at the beginning of the text thus integrating coverage of ionizing and nonionizing radiation rather than considering them as two separate disciplines He goes on to cover the entire spectrum of radiation sources including radionuclides x ray machines accelerators nuclear reactors power lines microwave towers and cellular phones With its expanded coverage including a broader focus on public health issues this new volume will serve as an important training and reference resource not only for research scientists physicians and engineers but for regulatory officials attorneys engineers and environmental health and safety professionals The breadth of citations alone makes this resource invaluable
