Forrest Mims' Science Experiments Forrest M. Mims III, 2016-08-03 Forrest M Mims is a revered contributor to Make magazine where his popular columns about science related topics and projects for Makers are evergreen treasures. Collected together here for the first time these columns range from such simple projects as building an LED tracker for hand launched night rockets to such challenging builds as transforming strings of data into unique musical compositions. A variety of photography and imaging projects are featured including an ultra sensitive twilight photometer that measures the elevation of layers of dust, smoke and smog from around 3,000 feet to the top of the stratosphere at 31 miles. Most of the projects can be done with a collection of simple electronic components such as LEDs, transistors, resistors and batteries. To inspire and motivate readers, the book also includes profiles of such famous Makers as President Thomas Jefferson and Microsoft co-founder Paul Allen.

Make: Technology on Your Time Volume 31 Mark Frauenfelder, 2012-07-18 Why are so many kids and adults like you bored by science? Simple: you've had no real contact with it. You might read about incredibly expensive scientific projects, but your hands-on experience is probably limited to the same tired experiments like baking soda and vinegar volcanoes. Not any longer. Make Magazine's Punk Science issue, volume 31, shows you how you can become a real cutting edge amateur scientist. Find out how high school and college students can get an introduction to modern biology research through affordable biotech labs provided by Otyp, a small Michigan based biotechnology company. And learn how a cooperative network of schools and research groups called PEER enables students to learn science by working on real projects with people in the field, including the DECA Distributed Electronic Cosmic Ray Observatory that uses Android phones to generate a real time cosmic ray flux map of a large area. This issue also shows you how to create these fascinating projects on your own: RoboRoach: Surgically modify a cockroach with a wireless electronic circuit so that you can control it to turn left or right by micro stimulating its antenna nerves; Lord Kelvin's Thunderstorm: a little known classic science experiment that generates high voltage lightning sparks by dripping water through metal rings; An automatic Ball Toy Launcher for Dogs that will keep your pet entertained and exercised while you're away; A True Mirror which shows what you look like to other people. Pick up a copy of Make today and get involved with real science.

A New History of Modern Computing Thomas Haigh, Paul E. Ceruzzi, 2021-09-14 How the computer became universal. Over the past fifty years the computer has been transformed from a hulking scientific supertool and data processing workhorse, remote from the experiences of ordinary people, to a diverse family of devices that billions rely on to play games, shop, stream music and movies, communicate and count their steps. A comprehensive reimagining of Ceruzzi's *A History of Modern Computing*, this new volume uses each chapter to recount one such transformation, describing how a particular

community of users and producers remade the computer into something new Haigh and Ceruzzi ground their accounts of these computing revolutions in the longer and deeper history of computing technology They begin with the story of the 1945 ENIAC computer which introduced the vocabulary of programs and programming and proceed through email pocket calculators personal computers the World Wide Web videogames smart phones and our current world of computers everywhere in phones cars appliances watches and more Finally they consider the Tesla Model S as an object that simultaneously embodies many strands of computing
