Radio Stars:

Radio Stars R. Hjellming, David M. Gibson, 2012-12-06 This book is the proceedings of a workshop on stellar continuum radio astronomy that was held in Boulder Colorado on August 8-10 1984 Although it was originally intended to be a small workshop with participants mainly from North America it evolved to a workshop with 72 participants from twelve countries U S A 52 Canada 3 the Netherlands 3 United Kingdom 3 Australia 2 Ireland 2 Italy 2 France 1 Mexico 1 Switzerland 1 West Germany 1 and U S S R 1 This workshop was sponsored by the Joint Institute of Laboratory Astrophysics JILA and the University of Colorado In order to preserve a workshop atmosphere while still presenting both extensive reviews and contributed papers an experimental format was adopted All contributed papers related to the topic of the day were presented in poster form in the early morning and were accessible all day During each morning or afternoon session review papers were presented followed by a coffee break in the poster area adjacent to the conference room Then the review papers and contributed papers were discussed for roughly one and a half hours The last session was devoted to invited panel papers and discussion of current and future problems in the field of stellar radio astronomy *Radio Stars* Thomas A.

Scintillations of Radio Stars Observed at Boulder, Colorado Robert S Lawrence, James Jespersen, 1959 Variations in the apparent flux from the radio source Cygnus A are recorded at 53 and 108 mc/s using a two element phase sweeping interferometer located at Boulder An ionospheric sounder operating at Ellsworth Nebraska provides simultaneous vertical incidence measurements of the ionosphere along the path Amplitude scintillations observed at Boulder over a six month period are compared with the ionograms taken at Ellsworth Positive correlation is found between amplitude scintillations and spread F while a small negative correlation is found with sporadic E The present result appears to be significant but a full year's data are being accumulated to disclose seasonal or diurnal effects Detailed analysis of the scintillations indicates that the probability distribution of the amplitude can be represented by the Rice probability distribution function The scintillation rate for 108 mc/s seems to be more rapid than for 53 mc/s *Radio Stars* Thomas A. Invisible Stars Donna Halper, 2015-02-11 *Invisible Stars* was the first book to recognize that women have always played an important part in American electronic media The emphasis is on social history as the author skillfully explains how the changing role of women in different eras influenced their participation in broadcasting This is not just the story of radio stars or broadcast journalists but a social history of women both on and off the air Beginning in the early 1920s with the emergence of radio the book chronicles the ambivalence toward women in broadcasting during the 1930s and 1940s the gradual change in status of women in the 1950s and 1960s the increased presence of women in broadcasting in the 1970s and the successes of women in broadcasting in the 1980s and 1990s The second edition is expanded to include the social and political changes that occurred in the 2000s such as the growing number of women talk show hosts changing attitudes about women in leadership roles in business more about minority women in media and women in sports and women sports announcers The author addresses the question of whether women are in fact no longer invisible in electronic media She provides an assessment of where progress for women in society as well as broadcasting can be seen and where progress appears totally stalled

Star Noise: Discovering the Radio Universe Kenneth I. Kellermann, Ellen N. Bouton, 2023-05-11 Until Karl Jansky s 1933 discovery of radio noise from the Milky Way astronomy was limited to observation by visible light Radio astronomy opened a new window on the Universe leading to the discovery of quasars pulsars the cosmic microwave background electrical storms on Jupiter the first extrasolar planets and many other unexpected and unanticipated phenomena Theory generally played little or no role or even pointed in the wrong direction Some discoveries came as a result of military or industrial activities some from academic research intended for other purposes some from simply looking with a new technique Often it was the right person in the right place at the right time doing the right thing or sometimes the wrong thing *Star Noise* tells the story of these discoveries the men and women who made them the circumstances which enabled them and the surprising ways in which real life scientific research works

Galactic and Extra-Galactic Radio Astronomy V. van Brunt, G.L. Verschuur, K.I. Kellermann, 2012-12-06 The present set of chapters by members of the staff of the National Radio Astronomy Observatory deals with the basic fields of research concerned with radio astronomy outside the solar system The emphasis in this volume is on the type of data available and its interpretation Basic theory is considered only where absolutely necessary and little discussion of receivers or techniques is entered into in most of the chapters The book is intended to take over where most textbooks on radio astronomy leave off that is in the discussion of what is actually known from the research done In addition there is a chapter on the technical aspects of interferometry and aperture synthesis since so much of modern radio astronomy depends and will depend in an ever increasing manner on such tools The editors want to stress that the chapters were not necessarily expected to be comprehensive reviews of any of the fields being covered but rather overall outlines which the individual authors felt would be suitable for graduate students and interested workers in other fields As a result the lists of references are not complete This only reflects the preferences of the individual authors and not the relative merit of those references included or omitted

The Physics of Non-Thermal Radio Sources G.

Setti, 2012-12-06 by the completion of large aperture synthesis radio telescopes which have permitted a detailed mapping of radio sources and by the development of very long base line interferometry VLBI with 4 3 resolutions down to 10 10 arc sec which for the first time has rendered possible radio investigations of the structures of the very compact radio sources found in galactic nuclei and quasars The observations obtained with this new instrumentation combined with the work in the optical infrared and X ray domain have made great strides in recent years toward improved testing of radio source models We feel that the material presented at the Institute represents a rather complete and comprehensive coverage of the present status of studies of non thermal radio sources though one is aware of rapid developments in this field of research The various aspects of this exciting subject were covered in a series of lectures presented in this volume totaling 44 hours and in 14 topical seminars given by the participants I wish to express my gratitude to the Scientific Affairs Division of the North Atlantic Treaty Organization for the generous support given to the course Sincere thanks are also due to Mr L Baldeschi for helping with the organization of the meeting and for drawing a number of figures contained in this volume to Mrs B Mandel for the patient typing and help in the editing and to Mr R Primavera for the photographic reproduction of part of the figures

Classics in Radio Astronomy W.T. Sullivan, 2012-12-06 Radio techniques were the first to lead astronomy away from the quiescent and limited Universe revealed by traditional observations at optical wave lengths In the earliest days of radio astronomy a handful of radio physicists and engineers made one startling discovery after another as they opened up the radio sky With this collection of classic papers and the extensive introductory material the reader can experience these exciting discoveries as well as understand the developing techniques and follow the motivations which prompted the various lines of inquiry For instance he or she will follow in detail the several attempts to detect radio waves from the sun at the turn of the century the unravelling by Jansky of a steady hiss type static the incredible story of Reber who built a 9 meter dish in his backyard in 1937 and then mapped the Milky Way the vital discoveries by Hey and colleagues of radio bursts from the Sun and of a discrete source in the constellation of Cygnus the development of receivers and interferometry in the post war years by the groups led by Ryle in Cambridge and Pawsey in Sydney the first measurements and exciting identifications of Taurus A the Crab Nebula Centaurus A Virgo A Cassiopeia A and Cygnus A the last opening
