Barlow and J. Brown Harold Everard Monteagle Barlow,John Brown,1962 Surface Waves Farzad Ebrahimi,2018-05-02 Surface waves have drawn a significant attention and interest in the recent years in a broad range of commercial applications while their commercial developments have been supported by fundamental and applied research studies This book is a result of contributions of experts from international scientific community working in different aspects of surface waves and reports on the state of the art research and development findings on this topic through original and innovative research studies It contains up to date publications of leading experts and the edition is intended to furnish valuable recent information to the professionals involved in surface wave analysis and applications The text is addressed not only to researchers but also to professional engineers students and other experts in various disciplines both academic and industrial seeking to gain a better understanding of what has been done in the field recently and what kind of open problems are in this area Surface Waves and Fluxes G.L. Geernaert,W.J. Plant,2013-11-11 During the Conference on Air Sea Interaction in January 1986 it was suggested to me by David Larner of Reidel Press that it may be timely for an updated compendium of air sea interaction theory to be organized developed and published Many new results were emerging at the time i e results from the MARSEN MAS EX MILDEX and TOWARD field projects among others were in the process of being reported and or published Further a series of new experiments such as FASINEX and HEXOS were soon to be conducted in which new strides in our knowledge of air sea fluxes would be made During the year following the discussions with David Larner it became apparent that many of the advances in air sea interaction theory during the 1970s and 1980s were associated with sponsor investments in satellite oceanography and in particular remote sensing research Since ocean surface remote sensing e g scatterometry and SAR requires intimate knowledge of ocean surface dynamics advances in remote sensing capabilities required coordinated research in air sea fluxes wave state scattering theory sensor design and data exploitation using environmental models Based on this interplay of disciplines it was decided that this book be devoted to air sea interaction and remote sensing as multi disciplinary activities *Radio surface waves* H.

M. Barlow, J. Brown, 1962 Surface wave driven molecular low pressure plasmas for general lighting Oeguen, Celal Mohan, 2016-02-23 Nowadays compact fluorescent lamps are widely used in general lighting applications However they still struggle with acceptance problems due to the hazardous mercury which serves as the radiant component inside the lamp The presented work deals with the development of a mercury free electrodeless low pressure plasma based on a molecular filling and driven by microwaves which may represent a viable alternative to the conventional CFLs Interaction of a Surface Wave with a Dielectric Slab Discontinuity Steven A. Arcone, 1978 *Simulation of the Sea Surface for Remote Sensing* Alexander Zapevalov, Konstantin Pokazeev, Tatiana Chaplina, 2020-10-09 This book considers the formation of the signal reflected from the sea surface when sensing in the radio and optical range Currently remote sensing from space is the main source of information about the processes taking place in the atmosphere and ocean The correct interpretation of remote sensing data requires detailed information about the rough surface that forms the reflected signal The first three chapters describe the statistical and spatial temporal characteristics of the sea surface focusing on the effects associated with the nonlinearity of sea surface waves The analysis makes extensive use of data obtained by the authors on a stationary oceanographic platform located on the Black sea In the next seven chapters the authors analyze how the nonlinearity of waves affects the formation of a signal reflected from the sea surface This book is geared for advanced level research in the general subject area of remote sensing and modeling as they apply to the coastal marine environment It is of value to scientists and engineers involved in the development of methods and instruments of remote sensing analysis and interpretation of data It is useful for students who have decided to devote themselves to the study of the oceans **Radio Surface Waves** E.
