the description of different techniques involved in research are described in an elaborate way It also includes the sources collection of scientific information method of scientific report paper thesis writing etc The book is also a source of different aspects of research methodology in plant science dealt with in a comprehensive manner tailored to the needs of postgraduate students research scholars for easy understanding The book is profusely illustrated The different chapters described in the book include Introduction Microscopy Plant micro technique Smear Squash technique Plant tissue culture Herbarium technique Hydrogen ion concentration pH Centrifugation Chromatography Electrophoresis Colorimetry Spectro photometry Radio isotopes in biology and Computers and their application in plant sciences Chapters on Biostatistics Biophysics and Bioinformatics have also been included to help the student in the statistical analysis of the results physical principles involved in the operation of different instruments and basics of bioinformatics We sincerely hope that this book helps to fill up the lacuna and provides what all that is needed about the research methods required for a scholar student in plant sciences to pursue their higher studies

**All-Union Conference on the Introduction of Radioactive Isotopes and Nuclear Radiation Into the National Economy of the USSR.** Atomnaya energiya, 1961      Physicochemical Methods of Mineral Analysis A. Nicol, 2012-12-06 This book has developed from a short residential course organised by the Department of Minerals Engineering and the Department of Extra Mural Studies of the University of Birmingham The course was concerned mainly with physical methods of analysis of minerals and mineral products and particular regard was given to non destructive methods with special emphasis on newly available techniques but with a review of older methods and their recent developments included therein Mineral analysis is obviously of great importance in all the stages of mineral exploration processing and utilisation Selection of a method for a particular mineral or mineral product will depend upon a number of factors primarily whether an elementary analysis or a phase or structure analysis is required It will also depend upon the accuracy required The chapters in the book covering the different methods show the range of useful applicability of the methods considered and should prove valuable as an aid or methods for a given set of circumstances in selecting a suitable method The book referring as it does to the majority of the instrumental methods available today as well as for comparison a useful contribution on the place of classical wet chemical analysis will be valuable to the student as well as to those analysts research workers and process engineers who are concerned with the winning processing and utilisation of minerals and mineral products
