Radiation Protection in Medical Physics Yves Lemoigne, Alessandra Caner, 2011-04-14 This book introduces the fundamental aspects of Radiation Protection in Medical Physics and covers three main themes: General Radiation Protection, Principles of Radiobiology, and Principles of Radiation Protection in Hospital Medical Physics. Each of these topics is developed by analysing the underlying physics principles and their implementation, quality and safety aspects, clinical performance, and recent advances in the field. Some issues specific to the individual techniques are also treated, e.g. calculation of patient dose as well as that of workers in hospital, optimisation of equipment used, shielding design of radiation facilities, radiation in oncology such as use of brachytherapy in gynecology or interventional procedures. All topics are presented with didactical language and style, making this book an appropriate reference for students and professionals seeking a comprehensive introduction to the field as well as a reliable overview of the most recent developments.

Practical Radiation Protection and Applied Radiobiology Steven B. Dowd, Elwin R. Tilson, 1999 Describes theory and clinical practice of radiation protection and radiology. Also covers latest regulatory requirements, discussions of legal and ethical considerations, and examples of common practice mistakes.

Maguire, 1985 **Biological Aspects of Radiation Protection** T. Sugahara, O. Hug, 1971 In the maintenance and development of sound standards of radiation protection many types of enquiry are important These range from the purely technical examination of the ways in which exposure may occur or radionuclides may enter the body under existing or new conditions of occupational activity to the most fundamental studies of the interaction of high energy particulate radiation with matter or the metabolic localisation and kinetics of unfamiliar radionuclides One of the most important and most basic problems however is to establish a quantitative estimate for the frequency with which various types of injury would be induced in man following exposure to low doses of radiation delivered at low dose rates No sound limits can be proposed for appropriately safe levels of occupational or population exposure unless the associated hazard or its maximum likely value can be at least approximately assessed It is one of the most important tasks of those concerned with radiation protection that these criteria should be kept under constant review in the light of developing knowledge and that the fields in which further information is needed should be defined and described
