Radioecology In Northern European Seas:

Radioecology in Northern European Seas Dmitry G Matishov, Gennady G Matishov, 2014-01-15 [Radioecology in Northern European Seas](#) Dmitry G. Matishov, Gennady G. Matishov, 2013-06-29 *Radioecology in Northern European Seas* summarizes an extensive body of literature on the oceanographic and biological conditions involved in the transfer and accumulation of radionuclides in marine sediment and biota of the Northern European seas. Much of the information has been derived through many decades of investigation carried out by the Murmansk Marine Biological Institute. This book presents the original works augmented and complemented by work conducted by other institutes during the nuclear era. The synthesis of this extensive body of information forms the basis of a new methodological and theoretical framework describing radionuclide bioaccumulation by marine invertebrate and vertebrate animals, paying special attention to marine food webs leading to humans.

Marine Radioecology, Volume 6 Jean-Claude Amiard, 2022-12-09. The marine environment in addition to a not insignificant background of natural radioactivity has continued to receive inputs of radionuclides directly or indirectly through atomic fallout discharges from the nuclear industry or from nuclear accidents. After their introduction, the fate of these radionuclides is complex, with modifications of physicochemical forms, dispersion in marine water masses, and adsorption onto sedimentary particles. Marine organisms then bioaccumulate these radionuclides to a greater or lesser extent, dispersing them via their burrowing activities, horizontal and vertical migrations, or through food webs. All of these phenomena lead to very variable radioactive contamination depending on location and the nature of the marine environments concerned, and consequently to very different doses of irradiation to marine organisms. The harmful effects of ionizing radiation on living marine organisms are felt at varying levels of biological organization, from the molecule to the ecosystem, passing through the cell, the organ, the individual, and the population. In the end, the radioactive risk for marine organisms can decline according to several situations, which can be normal, programmed, or accidental.

Encyclopedia of Marine Biotechnology Se-Kwon Kim, 2020-08-04. A keystone reference that presents both up-to-date research and the far-reaching applications of marine biotechnology. Featuring contributions from 100 international experts in the field, this five-volume encyclopedia provides comprehensive coverage of topics in marine biotechnology. It starts with the history of the field and delivers a complete overview of marine biotechnology. It then offers information on marine organisms, bioprocess techniques, marine natural products, biomaterials, bioenergy, and algal biotechnology. The encyclopedia also covers marine food and biotechnology applications in areas such as pharmaceuticals, cosmeceuticals, and nutraceuticals. Each topic in *Encyclopedia of Marine Biotechnology* is followed by 10-30 subtopics. The reference looks at algae, cosmetics, drugs, and fertilizers; biodiversity; chitins and chitosans; aeropylsinin 1; toluquinol; astaxanthin and fucoxanthin; and algal and fish genomics. It examines neuroprotective compounds from marine microorganisms, potential uses, and medical management of neurotoxic phyco toxins, and the role of metagenomics in exploring marine microbiomes. Other sections fully explore marine microbiology, pharmaceutical

development seafood science and the new biotechnology tools that are being used in the field today One of the first encyclopedic books to cater to experts in marine biotechnology Brings together a diverse range of research on marine biotechnology to bridge the gap between scientific research and the industrial arena Offers clear explanations accompanied by color illustrations of the techniques and applications discussed Contains studies of the applications of marine biotechnology in the field of biomedical sciences Edited by an experienced author with contributions from internationally recognized experts from around the globe Encyclopedia of Marine Biotechnology is a must have resource for researchers scientists and marine biologists in the industry as well as for students at the postgraduate and graduate level It will also benefit companies focusing on marine biotechnology pharmaceutical and biotechnology and bioenergy
