Radiation Safety in Nuclear Medicine Vincent J. Sodd, 1981

ICRP Publication 105 ICRP, 2008-12-22 This report was prepared to underpin the Commission s 2007 Recommendations with regard to the medical exposure of patients including their comforters and carers

and volunteers in biomedical research. It addresses the proper application of the fundamental principles: justification, optimisation of protection, and application of dose limits of the Commission's 2007 Recommendations to these individuals. With regard to medical exposure of patients, it is not appropriate to apply dose limits or dose constraints because such limits would often do more harm than good. Often there are concurrent chronic severe or even life-threatening medical conditions that are more critical than the radiation exposure. The emphasis is then on justification of the medical procedures and on the optimisation of radiological protection. In diagnostic and interventional procedures, justification of procedures for a defined purpose and for an individual patient and management of the patient dose commensurate with the medical task are the appropriate mechanisms to avoid unnecessary or unproductive radiation exposure. Equipment features that facilitate patient dose management and diagnostic reference levels derived at the appropriate national, regional, or local level are likely to be the most effective approaches. In radiation therapy, the avoidance of accidents is a predominant issue. With regard to comforters and carers and volunteers in biomedical research, dose constraints are appropriate. Over the last decade, the Commission has published a number of documents that provided detailed advice related to radiological protection and safety in the medical applications of ionising radiation. Each of the publications addressed a specific topic defined by the type of radiation source and the medical discipline in which the source is applied and was written with the intent of communicating directly with the relevant medical practitioners and supporting medical staff. This report consolidates that advice.

RADIATION PROTECTION AND SAFETY IN MEDICAL USES OF IONIZING RADIATION. INTERNATIONAL ATOMIC ENERGY AGENCY.,2022 *Radiation Safety in Nuclear Medicine* Gopal B. Saha,2023-04-04. This new edition is a fully updated guide to radiation safety practice for nuclear medicine professionals and assists the nuclear medicine technologists in taking their board certifying examination. The NRC requires the appointment of a radiation safety officer (RSO) or an associate radiation safety officer (ARSO) for different uses of radioactive material. Board-certified nuclear medicine technologists are eligible to be RSO and ARSO in specific uses of radioactive material after successfully completing a 40 hr or 200 hr course on radiation safety depending on the type of RAM use. This book covers all subject materials in these courses on radiation safety. This guide provides ready-made, handy information on radiation safety as required in the practice of nuclear medicine presented in a concise form for easy understanding and quick reference related to a given situation and/or incident. The major change in the new edition of the book is the addition of questions at the end of each chapter to ensure the comprehension of the material by the examinees taking their certifying board examinations. As mentioned in the first edition, the NRC 10CFR20 for Standards for Radiation Protection and the NRC 10CFR35 for Medical Uses of Radioactive Materials are the primary sources of practical information on radiation safety in nuclear medicine. Much of the information is still valid, but many changes and additions have also been made since, which are fully updated here. This is an ideal reference for nuclear medicine physicians, nuclear medicine technologists, and researchers using radioactive materials. **Radiation**
