Nicholson, 1996 Economics of Natural Resources, the Environment and Policies E. Kula, 2012-12-06 The economic activities of humanity particularly during the last couple of centuries have had a profound impact on the natural environment Fast depletion of the world's forest resources fish stocks fossil fuels and mine deposits have raised many moral as well as practical questions concerning present and future generations Furthermore a number of global environmental problems such as acid rain the greenhouse effect and depletion of the ozone layer are causing concern throughout the world What does economics say about the exploitation of nature's scarce resources This book which is a much expanded version of an earlier publication *Economics of Natural Resources and the Environment* aims mostly at final year undergraduates reading subjects such as economics business studies environmental science forestry marine biology agriculture and development studies There is also a good deal of material especially in the chapters

on fisheries forestry valuation and discounting that post graduate students may find useful as stepping stones The material presented stems from my lectures to final year students at the University of Ulster during the last 12 years and some of my ongoing research work When I moved to Northern Ireland in 1982 I was given a course called Economics of Exhaustible Resources to teach This has changed its title and focus a number of times along with the structure of the University My early reading lists included a number of journal articles and books written on the sub ject

Radiological Protection Options for Subseabed High-level Waste Disposal M. F. Kaplan,1985 Current Issues in Project Analysis for Development John Weiss,David Potts,2012-01-01 For over fifty years project analysis techniques have been applied in the assessment of development projects where poorly designed and appraised projects can waste scarce resources This study examines the continued relevance of this approach assesses methodological developments over this period and investigates current practical problems in the application of these techniques This major work brings together authors with experience of both academic and operational project work to focus on issues such as the shadow exchange rate the shadow wage the discount rate and assessment of poverty impact and risk as well as problems relating to specific sectors covering environmental projects transport education and health There are also general chapters on the experience of semi input output based estimation of shadow prices and the relevance of shadow pricing techniques to the context of developed economies in the EU An overview by the editors sets out the evolution of the literature and highlights current issues The general conclusion is that project analysis techniques remain relevant albeit within a very different development context to that in which they were originally envisaged to be applied With new perspectives on key economic parameters this book will appeal to academics working on development officials involved with project aid programmes postgraduate students of development and professional economists working on development projects
