

Howard Raiffa

A pioneer in decision analysis

When teaching statistics, Raiffa learned that more is needed to support decision making in practice

This led to Decision Analysis (1968)

Decision Analysis Howard Raiffa, 1970 Readings in Decision Analysis S. French, 2020-11-25 Provides an introduction to decision analysis This book is based upon a number of papers and articles taken from the Operational Research Society's journal and other publications However the book is not simply a collection of reprints Professor French has provided extensive notes and commentary to weave the extracts into a coherent whole Although techniques are presented the main thrust is to convey the purpose of decision analysis and the interpretation that should be placed upon its output vital topics but ones seldom discussed in introductory texts The writing is aimed at the non technical reader

Managerial Decision Analysis Danny Samson, 1992-05-19 This text focuses on how decision analysis can be used to support the managerial decision process It supports professors and students in the classroom with extensive case studies and problem sets and with Arborist software and documentation

Multiple Criteria Decision Analysis Valerie Belton, Theodor Stewart, 2002 The field of multiple criteria decision analysis MCDA also sometimes termed multiple criteria decision aid or multiple criteria decision making MCDM has developed rapidly over the past quarter century and in the process a number of divergent schools of thought have emerged Multiple Criteria Decision Analysis An Integrated Approach provides a comprehensive yet widely accessible overview of the main streams of thought within MCDA Two principal aims are To provide sufficient awareness of the underlying philosophies and theories understanding of the practical detail of the methods and insight into practice to enable researchers students and industry practitioners to implement MCDA methods in an informed manner To develop an integrated view of MCDA incorporating both integration of different schools of thought within MCDA and integration of MCDA with broader management theory science and practice thereby informing the development of theory and practice across these areas It is felt that this two fold emphasis gives a book which will be of value to the following three groups Practicing decision analysts or graduate students in MCDA for whom this book should serve as a state of the art review especially as regards techniques outside of their own specialization Operational researchers or

graduate students in OR MS who wish to extend their knowledge into the tools of MCDA Managers or management students who need to understand what MCDA can offer them Utility, Probability, and Human Decision Making Dirk Wendt, C.A. Vlek, 1975-12-31 Human decision making involves problems which are being studied with increasing interest and sophistication They range from controversial political decisions via individual consumer decisions to such simple tasks as signal discriminations Although it would seem that decisions have to do with choices among available actions of any kind there is general agreement that decision making research should pertain to choice problems which cannot be solved without a predecisional stage of finding choice alternatives weighing evidence and judging values The ultimate objective of scientific research on decision making is two fold a to develop a theoretically sound technology for the optimal solution of decision problems and b to formulate a descriptive theory of human decision making The latter may in turn protect decision makers from being caught in the traps of their own limitations and biases Recently in decision making research the strong emphasis on well defined laboratory tasks is decreasing in favour of more realistic studies in various practical settings This may well have been caused by a growing awareness of the fact that decision behaviour is strongly determined by situational factors which makes it necessary to look into processes of interaction between the decision maker and the relevant task environment Almost inevitably there is a parallel shift of interest towards problems of utility measurement and the evaluation of consequences **Theory and Practice in Policy Analysis** M. Granger Morgan, 2017-10-12 Practitioners of policy analysis will better understand the tools of their trade and the broader contexts in which analysis contributes *Group Verbal Decision Analysis* Alexey B. Petrovsky, 2023-03-14 This book describes an original approach to solving tasks of individual and collective choice classification ranking and selection of multi attribute objects Object representation with multisets allows considering simultaneously numerical and symbolic variables In group verbal decision analysis judgments of all participants are taken into account without a compromise between contradictory Natural language is used to describe problems and objects formalize knowledge of experts and preferences of decision makers and explain results Verbal methods and technologies are more transparent less laborious for a person and weakly sensitive to measurement errors The book also includes examples of applying new tools in real ill structured high dimensional choice tasks It is intended for researchers managers consultants analysts and developers as well as for teachers and students of applied mathematics computer science information processing engineering economics and management **Winning at Litigation through Decision Analysis** John Celona, 2016-06-01 This book is the first in depth guide to applying the philosophy theory and methods of decision analysis to creating and executing winning legal strategies With explanations that progress from introductory to advanced and practice problems at the end of each chapter this is a book the reader will want to use and refer to for years to come Practicing decision analysts operations research and management science students attorneys and law students will find this book an invaluable addition to their knowledge and skills John Celona has over three decades of experience in teaching and

applying decision analysis John lectures in the School of Engineering at Stanford University and is on faculty at The Stanford Center for Professional Development the American Course on Drug Development and Regulatory Sciences and the Academy of the American Society for Healthcare Risk Management **Organization and Decision Theory** Ira Horowitz,2012-12-06

Ira Horowitz Depending upon one's perspective the need to choose among alternatives can be an unwelcome but unavoidable responsibility an exciting and challenging opportunity a run of the mill activity that one performs seemingly without thinking very much about it or perhaps something in between Your most recent selections from a restaurant menu from a set of jobs or job candidates or from a rent or buy or sell or lease option are cases in point Oftentimes we are involved in group decision processes such as the choice of a president wherein one group member's unwelcome responsibility is another's exciting opportunity Many of us that voted in the presidential elections of both 1956 and 1984 irrespective of political affiliation experienced both emotions others just pulled the lever or punched the card without thinking very much about it Arriving at either an individual or a group decision can sometimes be a time consuming torturous and traumatic process that results in a long regretted choice that could have been reached right off the bat On other occasions the just let's get it over with and get out of here solution to a long festering problem can yield rewards that are reaped for many 1 ORGANIZATION AND DECISION THEORY 2 years to come One way or another however individuals and organizations somehow manage to get the decision making job done even if they don't quite understand and often question just how this was accomplished The Handbook of Dispute Resolution Michael L. Moffitt,Robert C. Bordone,2012-06-28 This volume is an essential cutting edge reference for all practitioners students and teachers in the field of dispute resolution Each chapter was written specifically for this collection and has never before been published The contributors drawn from a wide range of academic disciplines contains many of the most prominent names in dispute resolution today including Frank E A Sander Carrie Menkel Meadow Bruce Patton Lawrence Susskind Ethan Katsh Deborah Kolb and Max Bazerman The Handbook of Dispute Resolution contains the most current thinking about dispute resolution It synthesizes more than thirty years of research into cogent practitioner focused chapters that assume no previous background in the field At the same time the book offers path breaking research and theory that will interest those who have been immersed in the study or practice of dispute resolution for years The Handbook also offers insights on how to understand disputants It explores how personality factors emotions concerns about identity relationship dynamics and perceptions contribute to the escalation of disputes The volume also explains some of the lessons available from viewing disputes through the lens of gender and cultural differences Multiple Criteria Decision Analysis in Regional Planning Fumiko Seo,Masatoshi Sakawa,2012-12-06 This book is devoted to presenting theoretical fundamentals for the methods of multiple criteria decision making MCDM in the social sciences with particular intent to their applicability to real world decision making The main characteristics of the complex problems facing humans in the world today are multidimensional and have multiple objectives they are large scale and have noncommensurate and

conflicting objectives such as economic environmental societal technical and aesthetic ones The authors intend to establish basic concepts for treating these complex problems and to present methodological discussions for MCDM with some applications to administrative or regional planning MCDM is composed of two phases analytical and judgmental In this book we intend to consolidate these two phases and to present integrated methodologies for manipulating them with particular interest in managerial decision making which has not yet been properly treated in spite of its urgent necessity Although a number of books in MCDM fields have already been published in recent years most of them have mainly treated one aspect of MCDM Our work specifically intends to treat the methodology in unified systems and to construct a conceptual structure with special regards to the intrinsic properties of MCDM and its economic meanings from the social scientific point of view
