Spatial and Temporal Variations of the Turbulent Fluxes of Heat, Momentum, and Water Vapor Over Lake Ontario During IFYGL Bradford R. Bean,1975 During the 1972 IFYGL alert periods the highly instrumented NOAA RFF DC 6 aircraft was used to record the time series of wind temperature and water vapor at heights ranging from 18 to 300 m above the surface of Lake Ontario The aircraft was equipped with a gust probe system a fast response thermistor a microwave refractometer for water vapor measurements and a downward pointing IR system as well as the normal in flight measurement of standard meteorological parameters The time series records have been found to display a highly intermittent nature This is especially the case for evaporation when in the fall Polar Continental outbreaks move across the lake In particular such an outbreak of cold dry air moved across the lake at 12 15 m s⁻¹ on 9 October 1972 This resulted in the air temperature at 30 m above the lake to drop from 12 to 6 C while the evaporation rate increased to more than 1 cm day⁻¹ This may be compared with the 0.5 cm day⁻¹ normal evaporation observed in the tropics during BOMEX Furthermore IR lake surface temperatures show cold regions 5 C along the north shore presumably due to strong upwelling while the center and south shore regions of the lake were of the order of 12 to 15C The turbulent flux quantities of momentum heat and water vapor were obtained by the eddy correlation technique and their spectra were determined at several locations over the lake surface for 3 minute sampling lengths At the aircraft speed of 92 m s⁻¹ this represents a flight path of 17 km for both along wind and constant fetch patterns The spectra demonstrate the tendency for the peak value to march to higher wavelengths with increasing height WMPO ,1973 **On Quantitative Precipitation Forecasting** ,1960

illustrates the need for a better and more holistic understanding of how climate change affects countries in the Mediterranean region on the one hand but also on the many problems it faces on the other which prevent adaptation efforts There is also a perceived need to showcase successful examples of how to duly address and manage the many social economic and political problems posed by climate change in the region in order to replicate and even upscale the successful approaches used It is against this background that the book Climate Change in the Mediterranean and Middle Eastern Region has been produced It contains papers prepared by scholars practitioners and members of governmental agencies undertaking research and or executing climate change projects and working across the region
