Water-supply Paper ,1942 Risks and Management of Dioxin-like Compounds in Baltic Sea Fish Timo Assmuth, Pauliina Jalonen, 2005 *Improving Farmed Fish*

Quality and Safety Øyvind Lie, 2008-08-20 Global aquaculture production has grown rapidly over the last 50 years. It is generally accepted that there is limited potential to increase traditional fisheries since most fish stocks are well or fully exploited. Consequently, increased aquaculture production is required in order to maintain global per capita fish consumption at the present level. Fish farming enables greater control of product quality and safety and presents the possibility of tailoring products according to consumer demands. This important collection reviews safety and quality issues in farmed fish and presents methods to improve product characteristics. The first part of the book focuses on chemical contaminants, chemical use in aquaculture and farmed fish safety. After an opening chapter discussing the risks and benefits of consumption of farmed fish, subsequent contributions consider environmental contaminants, pesticides, drug use and antibiotic resistance in aquaculture. Part two addresses important quality issues such as selective breeding to improve flesh quality, the effects of dietary factors including alternative lipids and proteins sources on eating quality, microbial safety of farmed products, parasites, flesh colouration and off flavours. Welfare issues and the ethical quality of farmed products are also covered. The final part discusses ways of managing product quality with chapters on HACCP monitoring and surveillance, authenticity and product labelling. With its distinguished editor and international team of contributors, *Improving farmed fish quality and safety* is a standard reference for aquaculture industry professionals and academics in the field. Reviews safety and quality issues in farmed fish and presents methods to improve product characteristics. Discusses contaminants, persistent organic pollutants and veterinary drug residues and methods for their reduction and control. Addresses important quality issues, genetic control of flesh characteristics and the effects of feed on product nutritional and sensory quality.
