Rain Forests Hai Song Harvey, 2002 Rain forests contain the greatest variety of animal and plant life on earth and they are being destroyed more rapidly than any other type of wild habitat Many environmentalists and scientists believe that almost all the rain forests will be eliminated in less than thirty years Others continue to believe that the threat of their destruction is exaggerated This anthology debates the threats to the rain forests and measures designed to ensure their continued existence

Governing the Rainforest Eve Z. Bratman, 2019-09-24 Sustainable development is often thought of as a product that can be obtained by following a prescribed course of interventions Rather than conceptualizing it as a sweet spot of economic ecological and social balance sustainable development is an ongoing process of embroilments requiring constant negotiation of often competing aims Sustainable development politics yield highly uneven results among different members of society and different geographic areas As this book argues such imbalances mean that sustainable development processes often prioritize economic over environmental goals perpetuating and reinforcing economic and political inequalities *Governing the Rainforest* looks at development and conservation efforts in the Brazilian Amazon where the government and corporate interests bump up against those of environmentalists and local populations This book asks why sustainable development continues to be such a powerful and influential idea in the region and what impact it has had on various political and economic interests and geographic areas In other words as Eve Z Bratman argues sustainable development is a political practice in itself This book offers detailed case

study analysis including of the creation of vast conservation corridors the construction of one of the largest hydroelectric plants in the world and new forms of land settlement projects Based on a decade of Bratman s ethnographic fieldwork throughout Brazil and particularly along the Trans Amazonian Highway Governing the Rainforest offers a fresh take on sustainable development within a multi level analysis of actors discourses and practices *Corridor Ecology* Jodi A. Hilty,William Z. Lidicker Jr.,Adina M. Merenlender,2012-02-13 Corridor Ecology presents guidelines that combine conservation science and practical experience for maintaining enhancing and creating connectivity between natural areas with an overarching goal of conserving biodiversity It offers an objective carefully interpreted review of the issues and is a one of a kind resource for scientists landscape architects planners land managers decision makers and all those working to protect and restore landscapes and species diversity *Rainforest Restoration Manual for South-eastern Australia* Bill Peel,2010 East Gippsland Catchment Management Authority **Amazonian Rain Forests** Carl F. Corridor Ecology, Second Edition Jodi A. Hilty, Annika T.H. Keeley, William Z. Lidicker Jr., Adina M. Merenlender, 2019-04-23. Migrating wildlife species across the globe face a dire predicament as their traditional migratory routes are cut off by human encroachment. Forced into smaller and smaller patches of habitat, they must compete more aggressively for dwindling food resources and territory. This is more than just an unfortunate side effect of human progress. As key species populations dwindle, ecosystems are losing resilience and face collapse, and along with them, the ecosystem services we depend on. Healthy ecosystems need healthy wildlife populations. One possible answer: Wildlife corridors that connect fragmented landscapes. This new and expanded second edition of *Corridor Ecology: Linking Landscapes for Biodiversity Conservation and Climate Adaptation* captures the many advances in the field over the past ten years. It builds on concepts presented in the first edition on the importance and practical details of maintaining and restoring land connectivity. New to this edition is a guest-edited chapter on ecological connectivity in oceans, including a detailed discussion on pelagic marine corridors and how coastal corridors can provide critical connectivity between marine protected areas. Another new chapter considers the effects of climate change on habitat and offers recommendations on designing effective corridors as landscapes change with shifting climate conditions. The book also includes a discussion of corridors in the air for migrating flying species, from birds to bats, butterflies, and even plant propagules, a concept so new that a term to describe it has yet to be coined. All chapters are thoroughly revised and updated. Practitioners as well as serious scholars of landscape ecology and the science of protecting biodiversity will find this new edition of corridor ecology science an indispensable resource.

British Columbia's Inland Rainforest Susan K. Stevenson, Harold M. Armleder, André Arsenault, Darwyn Coxson, S. Craig DeLong, Michael Jull, 2011-07-01 The vast temperate rainforests of coastal British Columbia are world renowned but much less is known about the other rainforest located 500 kilometres inland along the western slopes of the interior mountains The unique integration of continentality and humidity in this region favours the development of lush rainforest communities that incorporate both coastal and boreal elements This book brings together for the first time a broad spectrum of information about the ecology management and conservation of this distinctive ecosystem Accessibly written and generously illustrated the chapters examine the physical social economic and ecological dimensions of the rainforest They also look at how the delicate balance of this ecosystem has been threatened by human use and climate change In the past governments encouraged the forest industry to clearcut the decadent old stands and replace them with rapidly growing young trees of other species More recently out of concern for the ecological consequences of such practices researchers have begun to examine alternative management strategies This book offers a vision that combines various strategies in order to balance the conservation of the inland rainforest as a fully functioning ecosystem with human use of its diverse resources
