methods of spatial econometrics Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries

The Urban and Regional Transformation of Britain John Goddard, Anthony Champion, 2018-05-30 Originally published in 1983 The Urban and Regional Transformation of Britain analyses economic and social changes recorded across the cities and regions of Britain since the Barlow Report The collection analyses the whole country at a more detailed scale than the ten Standard Regions for which most official statistics are produced Although there are important differences between the major regions of Britain many of the recent processes of change appear to have operated at a local level within rather than between regions The essays in this volume bring together change at the regional and local labour market scales and provides a comprehensive statement of urban and regional change seeking to highlight the new spatial priorities of the 1980s

The Impact of Recession Alan R. Townsend, 2024-09-18 Rich industrialised countries entered the 1980s with unemployment higher than before the Second World War Britain experienced the impact of recession more immediately and sharply over one million factory jobs were lost Originally published in 1983 and now reissued with a new Preface by the author this book points to the industries corporations and places in which job losses occurred between 1976 and 1981 The Impact of Recession opens with an examination of national trends which includes the post war rise and fall of manufacturing employment and the fashionable concept of de industrialisation It considers the possible and actual roles of leading industrial corporations in distributing decline to different areas The effects of the crisis on individual regions is examined in detail and the author emphasizes that it is not only the traditional areas of recession such as the North East that were affected but also

the manufacturing centres of the Midlands and the normally prosperous South East Alternative explanations of the distribution of employment are examined and the adequacy of previous explanations of unequal growth and decline are questioned The book also looks at the extent to which New Towns have suffered in the crisis and whether the well established consensus about the merits of regional planning has been broken down by the recession

Economic Policy Issues for the Next Decade Karl Aiginger,G. Hutschenreiter,2013-03-09 There are several reasons why it has become important to rethink economic policy Out of the European perspective it is the new currency the enlargement towards Central and Eastern European countries the sluggish growth and the end of productivity convergence towards the USA and the insufficient creation of employment From the transatlantic perspective increasing differences in the economic policy and the potential rise of conflicts between Europe and the USA for example in trade competition and health issues are important The current volume touches most but not all of these topics It starts with the overview by Joseph Stiglitz on policy issues Then macroeconomics policy is discussed followed by the problem of an ageing society and European enlargement Differences between Europe and the USA are large in taxation and in the role of public finance The relative competitiveness of countries as well as of Europe will be decided by investments into new technologies and progression towards the Science Based Economy In the final section the role of economists in shaping the economic agenda and giving policy advice is discussed
