The associations between religion, bereavement and depression among Hong Kong nurses

Teris Cheung^{1*}, Paul H. Lee^{1†} and Paul S. F. Yip^{2†}

Abstract

Background: This paper is to examine the associations between religion, bereavement and depression among nursing professionals using a cross-sectional survey design. There is little empirical evidence in Asia suggesting that religion may either increase or lower the likelihood of nursing professionals being depressed.

Methods: We analyzed the results of a Mental Health Survey soliciting data from 850 Hong Kong nurses (aged 21–59, 178 males) regarding their mental well-being and associated factors, including participants' socio-economic profile and recent life-events. Multiple linear regression analyses examined associations between religion, bereavement and depression.

Results: Religious faith is weakly associated with lower self-reported depression in bereavement.

Conclusions: Our findings confirm those studies suggesting that religion positively affects mental health and yet healthcare providers have yet to assimilate this insight.

Keywords: Bereavement, Depression, Mental health, Nurses, Religion

Background

The population in Hong Kong exceeded 7 million at the end of 2014 [1]. According to the Basic Law of the Hong Kong Special Administrative Region (HKSAR), all Hong Kong citizens can practice any religion. It has been estimated that approximately 43% of the Hong Kong population practice some form of religion [2]. Buddhism and Taoism are the predominant faiths in this metropolitan city [2]. However, most research investigating connections between faith and depression has been conducted in Western countries on cohorts living in the West [3]. There is little empirical evidence in Asia suggesting that religion may either increase or lower the likelihood of people—either employed, unemployed or in any specific profession—being depressed.

Religion and depression

A growing body of empirical evidence suggests that having a religion is closely associated with better physical and mental health [4], in particular in inhibiting major depression and suicide [5]. Religious congregants show a reduced risk of developing depression [6] and recover quicker [7]. Scholarship has explained these findings through a “buffering hypothesis”: through religious activities, individuals are supported by others within networks [8]. These social ties help reduce social isolation and guard against major mental disorder [4, 6]. Religion also induces optimism and instills hope [4] in providing a coherent framework to interpret life-events [3].

Koenig et al. [3] have recently examined 339 studies (272 cross-sectional, 45 prospective studies, and 22 clinical trials) of the relationship: of the 272 cross-sectional studies, 63% ($n = 170$) reported a significant positive relationship between religiousness and lower rates of depression; 22% ($n = 60$) reported no association; 6% ($n = 17$) reported greater depression among the more religious; and 8% ($n = 22$) reported mixed findings. 1%

Choosing Life, Choosing Death Charles Foster, 2009-02-27 Autonomy is a vital principle in medical law and ethics It occupies a prominent place in all medico legal and ethical debate But there is a dangerous presumption that it should have the only vote or at least the casting vote This book is an assault on that presumption and an audit of autonomy s extraordinary status This book surveys the main issues in medical law noting in relation to each issue the power wielded by autonomy asking whether that power can be justified and suggesting how other principles can and should contribute to the law It concludes that autonomy s status cannot be intellectually or ethically justified and that positive discrimination in favour of the other balancing principles is urgently needed in order to avoid some sinister results This book is a sustained attack on the hegemony of the idea of autonomy in medical ethics and law Charles Foster is no respecter of authority whether of university professors or of law Lords He grabs his readers by their lapels and shakes sense into them through a combination of no nonsense rhetoric and subtle argument that is difficult to resist Tony Hope Professor of Medical Ethics Oxford University This book is unlikely to be in pristine state by the time you have finished reading it Whether that is because you have thrown it in the air in celebration or thrown it across the room in frustration will depend on your perspective But this book cannot leave you cold It is a powerful polemic on the dominance of autonomy in medical law which demands a reaction Charles Foster sets out a powerful case that academic medical lawyers have elevated autonomy to a status it does not deserve in either ethical or legal terms In a highly engaging accessible account he challenges many of the views which have become orthodox within the academic community This will be a book which demands and will attract considerable debate Jonathan Herring Exeter College Oxford University This is a learned lively and thought provoking discussion of problems central to the courts approach to ethical issues in medical law What principles are involved More significantly which really underlie and inform the process of seeking justice in difficult cases Charles Foster persuasively argues and demonstrates that respect for autonomy is but one of a number of ethical principles which interact and may conflict He also addresses the sensitive issue of the extent to which thoughts and factors which go to influence legal decisions may not appear in the judgments Adrian Whitfield QC Introducing the Jake La Motta of medical ethics Foster is an academic street

fighter who has bloodied his hands in the court room He provides a stinging relentless ground attack on the Goliath of medical ethics the central place of autonomy in liberal medical ethics This is now the first port of call for those who feel that medical ethics has become autonomized Julian Savulescu Uehiro Chair in Practical Ethics University of Oxford This important book offers a robust challenge to anyone whether lawyer or ethicist who sees respect for autonomy as the only game in town It argues eloquently and effectively that on the one hand despite the reverence paid to it by judges in practice the law even in the context of consent weaves together a number of moral threads of which autonomy is merely one in the pursuit of a good decision It argues on the other hand that were the day to day practice of law to be guided primarily by respect for autonomy this would be wrong Foster concludes that whilst any society that does not have laws robustly protecting autonomy is an unsafe and unhappy one so too would be a society in which too much emphasis was placed on respect for autonomy at the expense of other important moral principles This is essential reading for anyone interested in the role of autonomy and indeed of medical ethics in the law Michael Parker Professor of Bioethics University of Oxford
