Longevity The Biology And Demography Of Life Span:

Longevity James R. Carey, 2003-03-02 Despite our deep interest in mortality little is known about why some individuals live to middle age and others to extreme old age Life span mortality and aging present some of the most profound mysteries in biology In *Longevity* James Carey draws on unprecedented data to develop a biological and demographic framework for identifying the key factors that govern aging life span and mortality in humans and other animals Carey presents the results of a monumental twelve year National Institute on Aging funded research project on the determinants of longevity using data from the life tables of five million Mediterranean fruit flies the most comprehensive set of life table studies ever on the mortality dynamics of a single species He interprets the fruit fly data within the context of human aging and the aging process in general to identify the determinants of mortality Three key themes emerge the absence of species specific life span limits the context specific nature of the mortality rate and biodemographic linkages between longevity and reproduction A powerful foundation for the emerging field of biodemography and a rich framework for considering the future of human life span *Longevity* will be an indispensable resource for readers from a range of fields including population biology demography gerontology ecology evolutionary biology and medical research [Human Longevity, Individual Life Duration, and the Growth of the Oldest-Old Population](#) Jean-Marie Robine, Eileen M. Crimmins, Shiro Horiuchi, Yi Zeng, 2007-03-21 Old age survival has considerably improved in the second half of the twentieth century Life expectancy in wealthy countries has increased on average from 65 years in 1950 to 76 years in 2005 The rise was more spectacular in some countries the life expectancy for Japanese women rose from 62 years to 86 years during the same period Driven by this longevity extension the population aged 80 and over in those countries has grown fivefold from 8.5 million in 1950 to 44.5 million in 2005 Why has such a substantial extension of human lifespan occurred How long can we live In this book these fundamental questions are explored by experts from such diverse fields as biology medicine epidemiology demography sociology and mathematics they report on recent cutting edge studies about essential issues of human longevity such as evolution of lifespan of species genetics of human longevity reasons for the recent improvement in survival of the elderly medical and behavioral causes of deaths among very old people and social factors of long survival in old age **Biodemography of Aging** Anatoliy I. Yashin, Eric Stallard, Kenneth C. Land, 2016-08-22 This volume is a critical exposition of the data and analyses from a full decade of rigorous research into how age related changes at the individual level along with other factors contribute to morbidity disability and mortality risks at the broader population level After summarizing the state of our knowledge in the field individual chapters offer enlightening discussion on a range of key topics such as age trajectory analysis in select and general populations incidence age patterns of major chronic illnesses and indices of cumulative deficits and their use in characterizing and understanding the detailed properties of individual aging The book features comprehensive statistical analyses of unique longitudinal data sets including the unique resource of the Framingham Heart Study with its more than 60

years of follow up Culminating in penetrating conclusions about the insights gained from the work involved this book adds much to our understanding of the links between aging and human health **Handbook of Population** Dudley L.

Poston, Michael Micklin, 2006-08-10 This comprehensive handbook provides an overview and update of the issues theories processes and applications of the social science of population studies The volume s 30 chapters cover the full range of conceptual empirical disciplinary and applied approaches to the study of demographic phenomena This book is the first effort to assess the entire field since Hauser and Duncan s 1959 classic The Study of Population The chapter authors are among the leading contributors to demographic scholarship over the past four decades They represent a variety of disciplines and theoretical perspectives as well as interests in both basic and applied research **Demography - Volume II** Zeng

Biochemistry and Cell Biology of Ageing: Part II Clinical Science J. Robin Harris, Viktor I. Korolchuk, 2019-03-19 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice All chapters will start from the biochemistry or cell biology where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject Key focus points for this volume are nutrition external factors and genetics on aging There will also be chapters that will focus on various organs or tissues in which aging has been well studied like the eyes the muscles the immune system and the bones The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact

Human Evolutionary Demography Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in

demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers whether or not they are currently familiar with human evolutionary demography

The Routledge Handbook of Contemporary Inequalities and the Life Course Magda Nico, Gary Pollock, 2021-12-30 Drawing upon perspectives from across the globe and employing an interdisciplinary life course approach this handbook explores the production and reproduction of different types of inequality across a variety of social contexts Inequalities are not static easily measurable and essentially quantifiable circumstances of life They are processes which impact on individuals throughout the life course interacting with each other accumulating attenuating reproducing or distorting themselves along the way The chapters in this handbook examine various types of inequality such as economic gender racial and ethnic inequalities and analyse how these inequalities manifest themselves within different aspects of society including health education and the family at multiple levels and dimensions The handbook also tackles the global COVID 19 pandemic and its striking impact on the production and intensification of inequalities The interdisciplinary life course approach utilised in this handbook combines quantitative and qualitative methods to bridge the gap between theory and practice and offer strategies and principles for identifying and tackling issues of inequality This book will be indispensable for students and researchers as well as activists and policy makers interested in understanding and eradicating the processes of production reproduction and perpetuation of inequalities

Whether looking at intelligence or emotion cognition or behavior science has continued to tell us that men and women are fundamentally different Biologists claim that women are better suited to raising families or are more gently uniquely empathetic Men on the other hand continue to be described as excelling at tasks that require logic spatial reasoning and motor skills But a huge wave of research is now revealing an alternative version of what we thought we knew The new woman revealed by this scientific data is as strong strategic and smart as anyone else In *Inferior* acclaimed science writer Angela Saini weaves together a fascinating and sorely necessary new science of women As Saini takes readers on a journey to uncover science's failure to understand women she finds that we're still living with the legacy of an establishment that's just beginning to recover from centuries of entrenched exclusion and prejudice Sexist assumptions are stubbornly persistent even in recent years researchers have insisted that women are choosy and monogamous while men are naturally promiscuous or that the way men's and women's brains are wired confirms long discredited gender stereotypes As Saini reveals however groundbreaking research is finally rediscovering women's bodies and minds *Inferior* investigates the gender wars in biology psychology and anthropology and delves into cutting edge scientific studies to uncover a fascinating new portrait of women's brains bodies and role in human evolution
