From Jars to the Stars Todd Neff, 2016-01-01 How did a company best known for its glass jars hit a comet 83 million miles away? The answer involves technical expertise, heroic dedication, an industrial giant's push to modernize Hitler's V-2 rocket speakers, destined for a Hall Oates summer concert tour, and the search for life's origins. In *From Jars to the Stars*, How Ball Came to Build a Comet Hunting Machine, award-winning science journalist Todd Neff presents an inside look at the backgrounds and motivations of the men and women who actually create the spacecraft on which the American space program rides. A timeless story of science, engineering, politics, and business strategy intertwining to bring success in the brutal business of space. *From Jars to the Stars* is a lively account of one of mankind's great modern achievements. It is a story about people, foremost those on the Deep Impact mission which smashed a spacecraft into the comet Tempel 1. *From Jars to the Stars* explores the improbable beginnings of Ball Aerospace Technologies Corp, which built the comet hunter, and the evolution of the American space agency that funded it. The book begins with the story of a group of University of Colorado students who built a sun seeker for the noses of sounding rockets studying the home star. The pathbreaking device sparked the creation and development of both Ball Aerospace and the University of Colorado's formidable Laboratory for Atmospheric and Space Physics. *From Jars to the Stars* describes how Ed Ball, president of the Ball Brothers Company of Muncie, Indiana, ended up owning a space business in Boulder, Colorado, through a combination of strategic intent and serendipity. Neff explores the personalities and the technologies behind Ball's pioneering spacecraft, the Orbiting Solar Observatory, launched in 1962. The Ball orbiter prepares the ground for Deep Impact, showing readers how much and how little changed across four decades of American space exploration. Neff goes on to show how Ball Aerospace evolved into an organization capable of building seven Hubble Space Telescope instruments, as well as the comet hunter at the center of the story. The author

describes the development of the American space enterprise as it went from emphasizing big budget gigabuck missions to faster better cheaper spacecraft of the sort Ball specialized in Neff pays special mind to NASA's Jet Propulsion Laboratory the world leader in interplanetary space exploration and Ball's partner on Deep Impact It was often a rocky marriage Throughout Neff makes clear that robotic space missions are indeed manned the people just happen to stay on the ground
