high speed defense of key targets Once blasted into the air from its vertical launch tower the pilot of the Natter was to climb towards an enemy formation using an internal rocket target an enemy bomber and fire his battery of rockets He would then use the remaining kinetic energy to climb higher than the bombers in order to mount a ramming attack Just before impact the pilot was to trigger a mechanism that would activate an ejection seat and separate the rocket unit which would return to earth by means of an automatically deployed parachute for reuse Relatively little has been published on the Natter and this book will provide a detailed and definitive account of this unusual but fascinating aircraft This will be required reading for all those interested in the history of the Luftwaffe during World War II particularly for those fascinated by the radical and revolutionary projects which German aircraft designers contrived toward the end of the Nazi regime
