Lunar Prospector Against All Odds:

Lunar Prospector Alan B. Binder, 2005 *Lunar Prospector Against All Odds* is the Principal Investigator's account of the conception, building, testing, and mission of the Lunar Prospector spacecraft that turned up evidence of water on the Moon. *Lunar Prospector Against All Odds* is a chronology of the mission revealing the day to day and behind the scenes personalities and behaviors of NASA and other space industries.

The Space Business Andrew May, 2021-10-07 *Dreams* schemes and opportunity as space opens for tourism and commerce. Twentieth century space exploration may have belonged to state funded giants such as NASA but there is a parallel history which has set the template for the future. Even before Apollo 11 landed on the Moon private companies were exploiting space via communication satellites a sector that is seeing exponential growth in the internet age. In human spaceflight too commercialisation is making itself felt. Billionaire entrepreneurs Elon Musk, Jeff Bezos, and Richard Branson have long trumpeted plans to make space travel a possibility for ordinary people and those ideas are inching ever closer to reality. At the same time other companies plan to mine the Moon for helium 3 or asteroids for precious metals. Science writer Andrew May takes an entertaining in depth look at the triumphs and heroic failures of our quixotic quest to commercialise the final frontier.

Air & Space Smithsonian, 2005

Space Enterprise Phillip Harris, 2009-12-29 *In Space Enterprise: Living and Working Offworld*. Dr Philip Harris provides the vision and rationale as to why humanity is leaving its cradle Earth to use space resources as well as pursuing lunar industrialization and establishing offworld settlements. As a management space psychologist Dr Harris presents a behavioral science perspective on space exploration and enterprise. In this his 45th book Phil has completely revised and updated the two previous editions of this classic placing new emphasis on the need for more synergy and participation by the private sector. He not only provides a critical review of what is happening in the global space community but offers specific strategies for lunar economic development. The author analyzes the human factors in contemporary and future space developments especially relative to the deployment of people aloft. This user friendly volume offers numerous photographs, diagrams, exhibits, and case studies.

[Deep Space Craft](#) Dave Doody, 2010-04-03 *Deep Space Craft* opens the door to interplanetary flight. It looks at this world from the vantage point of real operations on a specific mission and follows a natural trail from the day to day working of this particular spacecraft through the functioning of all spacecraft to the collaboration of the various disciplines to produce the results for which a spacecraft is designed. These results are of course mostly of a scientific nature although a small number of interplanetary missions are also flown primarily to test and prove new engineering techniques. The author shows how in order to make sense of all the scientific data coming back to Earth the need for experiments and instrumentation arises and follows the design and construction of the instruments through to their placement and testing on a spacecraft prior to launch. Examples are given of the interaction between an instrument's science team and the mission's flight team to plan and specify observations, gather and analyze data in flight, and finally present the results and discoveries.

to the scientific community This highly focused insider's guide to interplanetary space exploration uses many examples of previous and current endeavors It will enable the reader to research almost any topic related to spacecraft and to seek the latest scientific findings the newest emerging technologies or the current status of a favorite flight In order to provide easy paths from the general to the specific the text constantly refers to the Appendices Within the main text the intent is general familiarization and categorization of spacecraft and instruments at a high level to provide a mental framework to place in context and understand any spacecraft and any instrument encountered in the reader's experience Appendix A gives illustrated descriptions of many interplanetary spacecraft some earth orbiters and ground facilities to reinforce the classification framework Appendix B contains illustrated detailed descriptions of a dozen scientific instruments including some ground breaking engineering appliances that have either already been in operation or are poised for flight Each instrument's range of sensitivity in wavelengths of light etc and its physical principles of operation is described Appendix C has a few annotated illustrations to clarify the nomenclature of regions and structures in the solar system and the planets ring systems and places the solar system in context with the local interstellar environment

Lunar Prospector, Describes the Lunar Prospector a NASA spacecraft scheduled to be launched in October 1997 that will perform low polar orbit investigations of the moon The mission will include mapping of surface composition and possible polar ice deposits measurements of magnetic and gravity fields and the study of lunar outgassing events Provides information on the spacecraft's gamma ray spectrometer neutron spectrometer electron reflectometer and alpha particle spectrometer Offers access to information about the Doppler gravity experiment and other space missions
