Biomass Utilization: Conversion Strategies Nhuan Phu Nghiem, Tae Hyun Kim, Chang Geun Yoo, 2022-08-20 This book focuses on the technologies developed for the conversion of all three biomass components i.e. cellulose hemicellulose and lignin and their constituents to fuels and high value products Both biochemical and thermochemical approaches are reviewed Additionally the developed technologies are described in detail and their potential applications as well as their commercial status are discussed The early attempts to produce fuel ethanol from lignocellulosic biomass feedstock focused solely on the biological conversion of cellulose because the only organism that had been used successfully for commercial production of ethanol i.e. *Saccharomyces cerevisiae* could only ferment glucose which was obtained from the hydrolysis of cellulose Hemicellulose and lignin were considered as wastes in these processes and were normally removed in pretreatment processes to enhance enzymatic hydrolysis of the remaining cellulose However this approach was not economically feasible and as a result the biorefinery concept was developed In a biorefinery in addition to ethanol various higher value products are produced from hemicellulose and lignin which were previously not considered Consequently technologies were developed for the fractionation of biomass and conversion of hemicellulose and lignin to fuels and high value products to improve the economic feasibility Written and edited by a team of investigators with many years of experience in biomass processing research and development this book is an informative resource for postgraduate students and researchers interested in biorefinery and biofuel technologies both in academia and commercial laboratories

Yentekakis, Wei (Willy) Chu, 2020-05-13 Heterogeneous catalysis played plays and will continue to play a major key role in industrial processes for large scale synthesis of commodity chemicals of global importance and in catalytic systems that possess a critical role in energy generation and environmental protection approaches As a result of the ongoing progress in materials science nanotechnology and characterizations great advances have been achieved in heterogeneous catalysis by nanomaterials Efficient approaches and advanced methods for the design of nano structured composite materials up to atomic level subject to specific nano morphologies with enhanced metal metal and metal support interactions favorable for catalysis that enable fine tuning of the critical properties of the designed

catalysts provide optimized catalysts with outstanding performances in numerous eco friendly and cost effective applications Accordingly great progress has been achieved involving for example emissions control waste treatment photocatalytic bio refinery CO₂ utilization and fuel cells applications as well as hydrocarbon processing for H₂ added value chemicals and liquid fuels production The themed Special Issue has succeeded in collecting 10 high quality contributions that cover recent research progress in the field for a variety of applications e g environment energy added value chemicals organics synthesis and bio transformation declaring the prospect and importance of nanomaterials in all the directions of heterogeneous catalysis

Mobile Agents For Telecommunications Applications: Proceedings Of The First International Workshop Ahmed Karmouch, Roger Impey, 1999-09-24 A software agent has a spectrum of definitions At one end of the scale are relatively simple client based software applications that can assist users in performing mundane tasks such as sorting e mail or downloading web pages This class of agents is often referred to as personal assistant agents At the other end of the scale is the concept of sophisticated software entities possessing artificial intelligence that autonomously travel through a network environment and make complex decisions on a user s behalf In telecommunications the definition lies somewhere between those two extremes This classification of mobile agents although not strictly adhering to the definition of intelligent agents originally proposed by the artificial intelligence community is generally acknowledged to be a useful categorization and has started to gain widespread acceptance We therefore define a mobile agent as a program that acts on behalf of a user or another program and is able to migrate from host to host on a network under its own control The agent chooses when and where it will migrate and may interrupt its own execution and continue elsewhere on the network The agent returns results and messages in an asynchronous fashion This volume discusses the emerging field of mobile software agents and their applications to the area of telecommunications such as active networks e commerce the Internet interactive QoS network management and feature interactions It addresses the needs of a wide audience including researchers software agent systems and telecommunication applications designers and users of software agents
