M.A.S.S., Model Atmospheres and Stellar Spectra Saul J. Adelman, Friedrich Kupka, Werner W. Weiss, 1996      Theory of Stellar Atmospheres Ivan Hubeny, Dimitri Mihalas, 2014-10-26 The most authoritative synthesis of the quantitative spectroscopic analysis of stellar atmospheres This book provides an in depth and self contained treatment of the latest advances achieved in quantitative spectroscopic analyses of the observable outer layers of stars and similar objects Written by two leading researchers in the field it presents a comprehensive account of both the physical foundations and numerical methods of such analyses The book is ideal for astronomers who want to acquire deeper insight into the physical foundations of the theory of stellar atmospheres or who want to learn about modern computational techniques for treating radiative transfer in non equilibrium situations It can also serve as a rigorous yet accessible introduction to the discipline for graduate students Provides a comprehensive up to date account of the field Covers computational methods as well as the underlying physics Serves as an ideal reference book for researchers and a rigorous yet accessible textbook for graduate students An online illustration package is available to professors at [press.princeton.edu](http://press.princeton.edu)      *Astrophysics and Space Science* L.B.F.M. Waters, C. Waelkens, Karel A. van der Hucht, P.A. Zaal, 1998-08-31 This conference proceedings contains review papers and contributed papers discussing early results from the Infrared Space Observatory ISO on the subject of stellar evolution Three topics have been emphasized in the book young stellar objects and Vega type stars circumstellar matter of massive stars and late stages of stellar evolution The very rich harvest of new results from ISO is demonstrated by the many discoveries of new solid state and molecular bands in the spectra of stars and circumstellar shells and by spectacular images of circumstellar and interstellar matter The book is intended for professional astronomers and students      *Nuclear Science Abstracts* ,1975

Census of the Galaxy: Challenges for Photometry and Spectrometry with GAIA Vladas Vansevicius, Arunas Kucinskas, Jokubas Sudzius, 2002-06-30 Astrometry from space was performed for the first time and with great success by the ESA Hipparcos satellite 1989-93 This mission was designed as an astrometry mission but the use of a photon counting detector made it possible to produce very important photometric results the most accurate astronomical photometry ever by the main Hipparcos mission in a very broad band of 120000 stars and the two colour Tycho 2 photometry of 2.5 million stars The cornerstone ESA mission GAIA was approved in October 2000 for launch not later than 2012 This mission will use CCDs in time delayed integration mode instead of the photocathode detectors used in Hipparcos Due to the higher quantum efficiency of the CCDs simultaneous integration of many stars and larger telescope apertures GAIA will utilize the star light a million times more efficiently than Hipparcos resulting in astrometry and multi colour photometry for one billion stars GAIA photometry is crucial for the scientific utilization of the astrometric results and the photometric data have a high scientific content in themselves      **Scientific and Technical Aerospace Reports** ,1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA
