the last decade methods like graph based learning and neural network methods have been developed to process such data they are particularly suitable for handling relational learning tasks In many real world problems however relationships among the objects of our interest are more complex than pair wise Naively squeezing the complex relationships into pairwise ones will inevitably lead to loss of information which can be expected valuable for learning tasks Hypergraph as a generation of graph has shown superior performance on modelling complex correlations compared with graph Recent years have witnessed a great popularity of researches on hypergraph related AI methods which have been used in computer vision social media analysis etc We summarize these attempts as a new computing paradigm called hypergraph computation which is to formulate the high order correlations underneath the data using hypergraph and then conduct semantic computing on the hypergraph for different applications The content of this book consists of hypergraph computation paradigms hypergraph modelling hypergraph structure evolution hypergraph neural networks and applications of hypergraph computation in different fields We further summarize recent achievements and future directions on hypergraph computation in this book
