Machine Translation Theoretical And Methodological Issues:

   Machine Translation Sergei Nirenburg,1986   **Machine Translation** Bonnie Jean Dorr,1993 This book describes a novel cross linguistic approach to machine translation that solves certain classes of syntactic and lexical divergences by means of a lexical conceptual structure that can be composed and decomposed in language specific ways This approach allows the translator to operate uniformly across many languages while still accounting for knowledge that is specific to each language   *Theoretical and Methodological Issues in Machine Translation of Natural Language, Proc. of 3rd Int Conf. Held Austin 11-13 June 1990* Linguistic Research Center,1990   Advances in Computers ,1999-09-14 Since its first volume in 1960 Advances in Computers has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field   *Current Issues in Computational Linguistics: In Honour of Don Walker* Antonio Zampolli,Nicoletta Calzolari,Martha Palmer,1994-06-30 With this volume in honour of Don Walker Linguistica Computazionale con tinues the series of special issues dedicated to outstanding personalities who have made a significant contribution to the progress of our discipline and maintained a special collaborative relationship with our Institute in Pisa I take the liberty of quoting in this preface some of the initiatives Pisa and Don Walker have jointly promoted and developed during our collaboration because I think that they might serve to illustrate some outstanding features of Don s personality in particular his capacity for identifying areas of potential convergence among the different scientific communities within our field and establishing concrete forms of coop eration These initiatives also testify to his continuous and untiring work dedi cated to putting people into contact and opening up communication between them collecting and disseminating information knowledge and resources and creating shareable basic infrastructures needed for progress in our field Our collaboration began within the Linguistics in Documentation group of the FID and continued in the framework of the CCL International Committee for Computational Linguistics In 1982 this collaboration was strengthened when at CO LING in Prague I was invited by Don to join him in the organization of a series of workshops with participants of the various communities interested in the study development and use of computational lexica   *Audiovisual Translation* Yves Gambier,Sara Ramos Pinto,2018-06-15 The exponential growth of Audiovisual Translation AVT in the last three decades has consolidated its place as an area of study within Translation Studies TS However AVT is still a young domain currently exploring a number of different lines of inquiry without a specific methodological and theoretical framework This volume discusses the advantages and drawbacks of ten approaches to AVT and highlights the potential avenues opened up by new methods Our aim is to jumpstart the discussion on the in adequacy of the methodologies imported from other disciplines and the need or not for a conceptual apparatus and framework of analysis specific to AVT

This collective work relates to recent edited volumes that seek to take stock on research in AVT but it distinguishes itself from those publications by promoting links in what is now a very fragmented field Originally published as a special issue of Target 28 2 2016   **Encyclopedia of Microcomputers** Allen Kent,James G. Williams,1990-06-29 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology   **Computational Lexical Semantics** Patrick Saint-Dizier,Evelyn Viegas,1995-02-24 Lexical semantics has become a major research area within computational linguistics drawing from psycholinguistics knowledge representation and computer algorithms and architecture Research programs whose goal is the definition of large lexicons are asking what the appropriate representation structure is for different facets of lexical information Among these facets semantic information is probably the most complex and the least explored Computational Lexical Semantics is one of the first volumes to provide models for the creation of various kinds of computerized lexicons for the automatic treatment of natural language with applications to machine translation automatic indexing and database front ends knowledge extraction among other things It focuses on semantic issues as seen by linguists psychologists and computer scientists Besides describing academic research it also covers ongoing industrial projects   *Routledge Encyclopedia of Translation Technology* Chan Sin-wai,2014-11-13 The Routledge Encyclopedia of Translation Technology provides a state of the art survey of the field of computer assisted translation It is the first definitive reference to provide a comprehensive overview of the general regional and topical aspects of this increasingly significant area of study The Encyclopedia is divided into three parts Part One presents general issues in translation technology such as its history and development translator training and various aspects of machine translation including a valuable case study of its teaching at a major university Part Two discusses national and regional developments in translation technology offering contributions covering the crucial territories of China Canada France Hong Kong Japan South Africa Taiwan the Netherlands and Belgium the United Kingdom and the United States Part Three evaluates specific matters in translation technology with entries focused on subjects such as alignment bitext computational lexicography corpus editing online translation subtitling and technology and translation management systems The Routledge Encyclopedia of Translation Technology draws on the expertise of over fifty contributors from around the world and an international panel of consultant editors to provide a selection of articles on the most pertinent topics in the discipline All the articles are self contained extensively cross referenced and include useful and up to date references and information for further reading It will be an invaluable reference work for anyone with a professional or academic interest in the subject   Fourth International Conference on Theoretical and Methodological Issues in Machine Translation Canadian Workplace Automation
