Economic Evaluation and Investment Decision Methods Franklin J. Stermole, John M. Stermole, 1996 **Economic Risk in Hydrocarbon**

Exploration Ian Lerche, John A. MacKay, 1999-01-08 Economic Risk in Hydrocarbon Exploration provides a total framework for assessing the uncertainties associated with exploration risk from beginning to end Numerous examples with accompanying microcomputer algorithms illustrate how to quantitatively approach economic risk The text compares detailed assumptions and models of economic risk and presents numerical examples throughout to facilitate hands on calculations using popular spread sheet packages on personal computers Covers economic risk from exploration through production models Brings methods to a level where all can be done on a PC Analyzes numerical examples from the real world Removes

mystery from how economics is done Addresses assumptions in models and shows how they influence projections **Energy Abstracts for Policy Analysis**, 1989-07 **Quantitative Analysis of Mineral and Energy Resources** C.F. Chung, Andrea G. Fabbri, R. Sinding-Larsen, 2012-12-06 This volume contains the edited papers prepared by lecturers and participants of the NATO Advanced Study Institute on Statistical Treatments for Estimation of Mineral and Energy Resources held at Il Ciocco Lucca Italy June 22 July 4 1986 During the past twenty years tremendous efforts have been made to acquire quantitative geoscience information from ore deposits geochemical geophysical and remotely sensed measurements In October 1981 a two day symposium on Quantitative Resource Evaluation and a three day workshop on Interactive Systems for Multivariate Analysis and Image Processing for Resource Evaluation were held in Ottawa jointly sponsored by the Geological Survey of Canada the International Association for Mathematical Geology and the International Geological Correlation Programme Thirty scientists from different countries in Europe and North America were invited to form a forum for the discussion of quantitative methods for mineral and energy resource assessment Since then not only a multitude of research projects directed toward quantitative analysis in the Earth Sciences but also recent advances in hardware and software technology such as high resolution graphics data base management systems and statistical packages on mini and micro computers made it possible to study large geoscience data sets In addition methods of image analysis have been utilized to capture data in digital form and to supply a variety of tools for characterizing natural phenomena **Petroleum Exploration Economics and Risk Analysis** Paul D. OPEC Behaviour and World Oil Prices James M. Griffin, David J. Teece, 2016-03-02 This volume originally published in 1982 brings together economists political scientists and industry experts to explain OPEC's past achievements and future in the early 1980s prospects The book opens with a clear concise and easy to follow treatment of the economics of exhaustible resources under monopoly and competition the framework frequently used to examine pricing issues The role of wealth maximisation wealth satisfying and political factors as OPEC objectives are discussed and implications for world oil prices assessed The stability of OPEC and the limitations of its pricing policy are examined and OPEC oil pricing and importers policies analysed **Oil Exploration** Ian Lerche, 2012-12-02 This book presents quantitative procedures for assessing predictions of potential oil recovery basin size hydrocarbon content and economic impact exploration cost production transport and refining Emphasis is placed on advances made in analytical methods and improved techniques developed during the last decade **Geologic Modeling and Simulation** Daniel F. Merriam, John C. Davis, 2012-12-06 Modeling and simulation were introduced to the earth sciences about four decades ago Modeling has proven its worth and now it is an accepted procedure for analyzing and solving geological problems The papers in this collection are focused on modeling sediment deposition and sedimentary sequences and have a decidedly practical flavor Some of the leading simulation packages such as CORRELATOR SEDFLUX SEDpak SEDSIM STRATA and STRATSIM are applied to problems in

hydrocarbon exploration oil production groundwater development coal bed appraisal geothermics and environmental diagnosis All of these subjects fall under the broad heading of sedimentary basin analysis The fifteen papers in this volume are written by internationally recognized experts from academia and industry The contributions represent the status of geologic modeling and simulation at the start of the 21st century and will give the reader an insight into current research problems and their possible solutions *Computing Risk for Oil Prospects: Principles and Programs* J.W. Harbaugh,J.C. Davis,J. Wendebourg,1995-11-22 The petroleum industry is enduring difficult financial times because of the continuing depressed price of crude oil on the world market This has caused major corporate restructuring and reductions in staff throughout the industry Because oil exploration must now be done with fewer people under more difficult economic constraints it is essential that the most effective and efficient procedures be used Computing Risk for Oil Prospects describes how prospect risk assessment predicting the distribution of financial gains or losses that may result from the drilling of an exploration well can be done using objective procedures implemented on personal computers The procedures include analyses of historical data interpretation of geological and geophysical data and financial calculations to yield a spectrum of the possible consequences of decisions All aspects of petroleum risk assessment are covered from evaluating regional resources through delineating an individual prospect to calculation of the financial consequences of alternative decisions and their possible results The bottom lines are given both in terms of the probable volumes of oil that may be discovered and the expected monetary returns Statistical procedures are linked with computer mapping and interpretation algorithms which feed their results directly into routines for financial analysis The programs in the included library of computer programs are tailored to fit seamlessly together and are designed for ease and simplicity of operation The two diskettes supplied are IBM compatible Full information on loading is given in Appendix A Software Installation Risk I diskette contains data files and executables and Risk 2 diskette contains only executables The authors contend that the explorationist who develops a prospect should be involved in every facet of its analysis including risk and financial assessments This book provides the tools necessary for these tasks Economics of Worldwide Petroleum Production Fraser H. Management Allen N. Quick,Neal A. Buck,2012-12-06 In all the industries in which I do management consulting each manager considers his own industry to be truly unique Of course each is different in some respects and each has its own quirks and features However the similarities among in dustries far outweigh the differences The critical dynamics and the management issues have a great deal in common However there are I believe two industries or segments of industries that have an important critical uniqueness that does distinguish them from the rest One of these is the exploration for undiscovered natural resources notably for oil and gas the other is research In these two in dustry segments the competition is not nearly so much one firm against another as it is each firm against nature or if you prefer against the unknown This uniqueness not only sets these two industry segments apart from the rest it also helps us to see what they have in common with each other Pure scientific talent ability and genius have direct commercial value We do not have the zero sum game of competition in the market place A discovery by one firm does not usually perceptably lessen the opportunity of a competitor for a discovery On the contrary a discovery by one firm usually increases the knowledge of the whole industry increasing competitors opportunity for discovery We see the source of continuing life for the rest of the firm
