Petroleum Geology and Geology of the North Sea and Northeast Atlantic Continental Margin Concordia University. Systems Building Centre, University of Missouri. International Association of Housing Science, Petroleum Geology and Geology of the North Sea and Northeast Atlantic Continental Margin, 1975 Petroleum Geology of the North European Margin A. M. Spencer, 2012-12-06 Complete Proceedings of the Symposium organised by the Norwegian Petroleum Society and held at Trondheim Norway in 1983 **Petroleum Geology of Northwest Europe** A. J. Fleet, S. A. R. Boldy, 1999-09 A review of the extensive advances made in the understanding the petroleum geology of the Atlantic margin of northwest Europe of the North Sea and of adjacent areas since the last conference in 1992 In particular the volume focuses on the development of and application of 3D seismic time lapse 4D and other innovative seismic tools the ongoing refinement of sequence and other stratigraphic approaches including the integration of detailed biostratigraphic data the development of modelling at both the reservoir and basin scale which can respond to new data acquisition and be used to assess uncertainties at the reservoir scale and scenarios at the basin scale Geological Processes on Continental Margins M. S. Stoker, D. Evans, Daniel Evans, Adrian Cramp, 1998 Continental margins form the relatively narrow transition zones between the different domains of land masses and deep ocean basins They are the main regions of sediment input and transfer of sediments to the oceans and thus represent important zones of sediment flux This work addresses three topics of significance to continental margin development sedimentation mass wasting and stability It should be of interest to marine geologists sedimentologists palaeoceanographers and physical properties specialists **Petroleum Geology and Geology of the North Sea and Northeast Atlantic Continental Margin**, 1975 **Petroleum Geoscience** Knut Bjorlykke, 2010-09-16 Petroleum geoscience comprises those geoscientific disciplines which are of greatest significance for the exploration and recovery of oil and gas These include petroleum geology of which sedimentary geology is the main foundation along with the contextual and modifying principles of regional tectonic and structural geology Additionally biostratigraphy and micropalaeontology organic geochemistry and geophysical exploration and production techniques are all important tools for petroleum geoscientists in the 21st century This comprehensive textbook present an overview of petroleum geoscience for geologists destined for the petroleum industry It should also be useful for students interested in environmental geology engineering geology and other aspects of sedimentary geology Dynamics of the Norwegian Margin Geological Society of London, 2000 The papers and research results presented here have been prepared as part of the Integrated Basin Studies project This project had the objective of studying the lithospheric and upper crustal processes governing the formation and evolution of extensional and foreland basins and to decipher the role of tectonics sea level and sedimentary processes in the filling of such basins The Dynamics of the Norwegian Margin module focused on the rifted sedimentary basins of the northern North Sea and off Mid Norway This prolific hydrocarbon province has an extensive industry and scientific database

and offers a unique opportunity to study fundamental earth processes from failed rifting to crustal breakup and accretion of oceanic crust A set of new models for basin formation and filling has been derived including linking of sedimentary basin faulting to lower crustal deformation signature and variability of syn rift infill correlation of mineralogy to seismic signature nature and characteristics of volcanic margin formation and distribution of present day stress field The Nature and Origin of Compression in Passive Margins Howard Johnson,2008

**Petroleum Exploration and Exploitation in Norway** S. Hanslien,1995-12-15 This conference was arranged by the Norwegian Petroleum Society in order to commemorate the first 25 years of exploration on the Norwegian Continental Shelf Sixty papers and posters were presented of which 25 have been selected for this volume Since the start of exploration activities during the mid 1960 s the North Sea has not only proved to be one of the main petroleum provinces in the world but has also established itself as an excellent laboratory for geoscientific research and application This development has been stimulated greatly by the openness towards exchange of technical data encouragement by the Norwegian authorities The objective of this book is to assess the results of 25 years of exploration in Norway It focuses on lessons learned from past experiences as well as considering future challenges facing geoscientists in the industry relating to both exploration and exploitation activities Included are papers which assess the status and future trends of exploration in the main geological provinces on the Norwegian Continental Shelf from the Central Graben in the south to Svalbard and the Russian Arctic in the north

**Earthquakes at North-Atlantic Passive Margins: Neotectonics and Postglacial Rebound** Søren Gregersen,Peter W. Basham,2012-12-06 For many years the two subjects of 1 postglacial rebound and its potential for generating earthquakes and 2 the seismicity of passive continental margins have been of interest and concern to earth scientists on both sides of the North Atlantic New data and theoretical interpretations have given rise to vigorous discussions on how much the two phenomena inter relate and whether a significant controlling factor on seismicity in northeastern North America and Scandinavia is the crustal uplift that has been occurring since the latest ice age The lack of a good understanding of these phenomena presented a particular problem for engineering seismologists attempting to prepare accurate seismic hazard estimates for facilities both on land e.g nuclear power stations and radioactive waste repositories and offshore e.g petroleum production facilities The NATO Advanced Research Workshop programme provided an opportunity to bring together a group of relevant geophysicists geologists and geodesists from both sides of the North Atlantic and a workshop on Causes and Effects of Earthquakes at Passive Margins and in Areas of Postglacial Rebound on both Sides of the North Atlantic was held in Vordingborg Denmark 9-13 May 1988 The support of the NATO Science Committee is gratefully acknowledged

**Onshore-Offshore Relationships on the North Atlantic Margin** B.T.G. Wandås,J.P. Nystuen,E. Eide,F.M. Gradstein,2005-06-07 This book includes a selection of oral and poster presentations from Onshore Offshore Relationships on the Nordic Margin Conference held in Trondheim in 2002 The conference was jointly arranged by the Norwegian Geological Society NGF and the Norwegian Petroleum Society NPF and

attempted through different thematic sessions to bridge the gap often noted between industry and academic research The first part of the conference included presentations under the theme Basement control on offshore structuring with representative articles from that segment included in this book and covering topics that range from analysis of vertical movements of basement substrates to the deep structural architecture of the Norwegian Sea to the development of the Jan Mayen microcontinent These papers set the scene for the second segment of the conference Linking uplift and erosion with subsidence and deposition that in the present book include articles related to the Triassic to Present day infill history in the Norwegian and northern North Seas The last segment of the conference addressed New challenges with respect to natural features of the deep water areas that necessitate particular consideration and innovation on the part of research and industry to mitigate risk and maximize returns from field development In this book the articles addressing this theme present analyses of the enormous submarine slides that took place during the Holocene in the Norwegian Sea and are of particular interest to the developers of the Ormen Lange gas field other articles address the occurrences of gas hydrates in the near sea floor and the challenges presented in identifying and protecting the Lophelia cold water reefs in the region Processes creating the structural framework for the deposition and depositional patterns in the Norwegian Sea and northern North Sea Erosion and subsequent deposition of sediments in the subsiding deep water basins in the Norwegian Sea area and northern North Sea Challenges the oil industry has met in the deep water areas of the Norwegian continental shelf

*New Publications of the Geological Survey* Geological Survey (U.S.),1984      Ormen Lange - an integrated study for safe field development in the Storegga submarine area A. Solheim,P. Bryn,K. Berg,H.P. Sejrup,J. Mienert,2012-12-02 Great effort has been undertaken to investigate potential geohazards in relation to the development of the Ormen Lange gas field offshore Mid Norway The field is located in the scar left after the giant tsunami generating Storegga Slide which occurred roughly 8200 years ago and the slide risk has consequently received particular focus The studies have been multi disciplinary in character and have involved a number of companies universities and research institutions The results of the project led to a significant advance in the understanding of the Storegga Slide in particular and submarine slope instability in general and played an important role in the approval of field development by Norwegian authorities This book comprises 26 individual contributions representing the wide span of topics addressed in the project The main scope is to provide a state of the art report on geohazard investigations in a high latitude continental margin setting Most of the data and results published in this book would not have reached beyond the confidential report stage unless the license partners of the Ormen Lange license had agreed that this information deserves a wider audience Multidisciplinary and covers most themes treated in slope stability studies prior to the field development phase Provides a link between basic research and applied geohazard studies with direct relevance for risk evaluation in relation to field development activities such as pipeline design drilling of wells structure foundation etc A state of the art report on geohazard investigations in a high latitude continental margin setting in relation to field development

activities      Subaqueous Mass Movements and Their Consequences A. Georgiopoulou, L.A. Amy, S. Benetti, J.D Chaytor, M.A. Clare, D. Gamboa, P.D.W. Haughton, J. Moernaut, J.J. Mountjoy, 2020-07-08 This GSL volume focuses on underwater or subaqueous landslides with the overarching goal of understanding how they affect society and the environment The new research presented here is the result of significant advances made over recent years in directly monitoring submarine landslides in standardising global datasets for quantitative analysis constructing a global database and leading international research projects This volume demonstrates the breadth of investigation taking place into subaqueous landslides and shows that while events like the recent ones in the Indonesian archipelago can be devastating they are at the smaller end of what the Earth has experienced in the past Understanding the spectrum of subaqueous landslide processes and therefore the potential societal impact requires research across all spatial and temporal scales This volume delivers a compilation of state of the art papers covering topics from regional landslide databases to advanced techniques for in situ measurements to numerical modelling of processes and hazards

**Passive Margins** K.R. McClay, J.A. Hammerstein, 2020-07-01 This volume has evolved from papers written in memory of Professor David Roberts They summarize the key findings of recent research on passive margins from tectonics bathymetry stratigraphy and sedimentation structural evolution and magmatism Papers include analyses of the central and southern Atlantic margins of South America and Africa papers on magmatism and extension in the NE Brazilian margin and on the Cote de Ivoire margin rift architectures of the NW Red Sea margin tectonics of the eastern Mediterranean margin salt tectonics of passive margins of the Gulf of Mexico and Brazil and papers on the NW Shelf margin of Australia The volume provides readers with new insights into the complexities of passive margin systems that are in reality not so passive

**Hydrocarbon Exploration to Exploitation West of Shetlands** S.J.C. Cannon, D. Ellis, 2014-06-09 This volume addresses the challenges facing explorers and developers alike in a region that is becoming a major focus of the petroleum industry in the United Kingdom Faroes and North Norway Several West of Shetland fields are still in the appraisal phase almost a decade after discovery Sub volcanic exploration risks remain high sub volcanic structural traps are imaged poorly and so the geophysical community is responding with the application of latest technology The more simple reservoirs might not be large enough to prompt informed and speedy development decisions larger fields might have a combination of complexities requiring a phased approach to the development Infrastructure has been slow to arrive and planned developments have been subject to dramatic swings in fiscal regime ranging from special allowances to unexpected tax increases Environmental challenges are significant when moving into more remote deeper water The perception of these challenges by the third parties has become much more acute To sustain its right to operate the industry has to demonstrate safe drilling operations and appropriate response capability with government agencies

**Salt in the Earth Sciences** Webster Mohriak, 2025-08-07 A comprehensive review of giant salt basins salt tectonic events and their global implications Salt is formed when water rich in evaporite minerals accumulates on the Earth's surface and then evaporates Over time

pressure and tectonics change the structure and shape of salt layers Recent technological advances have improved the interpretation and modeling of subsurface salt structures Salt in the Earth Sciences Basin Analysis and Salt Tectonics presents a global overview of giant salt basins formed under diverse tectonic settings connecting salt deposition with tectonic events climate change and more Volume highlights include Stratigraphic and structural features of giant salt basins Theories for the origin of salt giants and their deep crustal architecture Accumulations of hydrocarbon resources in salt basins Global examples of giant salt basins Salt and shale tectonic models including salt and mud diapirism magmatism and salt dissolution Correlations with plate tectonics climate changes global glaciations and major volcanic events Extreme environments associated with evaporite deposition on Earth and other planets of the solar system Browse the other volume in this set Salt in the Earth Sciences Evaporite Rocks and Salt Deposition The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals *Philosophical Transactions of the Royal Society of London* ,1988
