**Quantum Mechanics of Fundamental Systems 1** Claudio Teitelboim,1988-07-31 **Quantization of Gauge Systems** Marc Henneaux,Claudio

Teitelboim,2020-06-16 This book is a systematic study of the classical and quantum theories of gauge systems It starts with Dirac s analysis showing that gauge theories are constrained Hamiltonian systems The classical foundations of BRST theory are then laid out with a review of the necessary concepts from homological algebra Reducible gauge systems are discussed and the relationship between BRST cohomology and gauge invariance is carefully explained The authors then proceed to the canonical quantization of gauge systems first without ghosts reduced phase space quantization Dirac method and second in the BRST context quantum BRST cohomology The path integral is discussed next The analysis covers indefinite metric systems operator insertions and Ward identities The antifield formalism is also studied and its equivalence with canonical methods is derived The examples of electromagnetism and abelian 2 form gauge fields are treated in detail The book gives a

general and unified treatment of the subject in a self contained manner Exercises are provided at the end of each chapter and pedagogical examples are covered in the text

**Calculus of Finite Differences** Károly Jordán, 1965 *Reduction of Nonlinear Control Systems* V.I. Elkin, 2012-12-06 Advances in science and technology necessitate the use of increasingly complicated dynamic control processes Undoubtedly sophisticated mathematical models are also concurrently elaborated for these processes In particular linear dynamic control systems  $\dot{y} = Ay + Bu$  where A and B are constants are often abandoned in favor of nonlinear dynamic control systems which in addition contain a large number of equations The solution of problems for multidimensional nonlinear control systems encounters serious difficulties which are both mathematical and technical in nature Therefore it is imperative to develop methods of reduction of nonlinear systems to a simpler form for example decomposition into systems of lesser dimension Approaches to reduction are diverse in particular techniques based on approximation methods In this monograph we elaborate the most natural and obvious in our opinion approach which is essentially inherent in any theory of mathematical entities for instance in the theory of linear spaces theory of groups etc Reduction in our interpretation is based on assigning to the initial object an isomorphic object a quotient object and a subobject In the theory of linear spaces for instance reduction consists in reducing to an isomorphic linear space quotient space and subspace Strictly speaking the exposition of any mathematical theory essentially begins with the introduction of these reduced objects and determination of their basic properties in relation to the initial object
