**Phagocytosis—past and future** Liana Bolis, 2012-12-02 Phagocytosis Past and Future is a collection of contributions by investigators who met in the Province of Messina Sicily in October 1980 to discuss the functions of phagocytic leukocytes in the host parasite relationship The topics discussed are largely in the areas of cell biology cellular immunology and biochemistry They ranged from aspects of cellular movement and the ingestion process per se to definition of substances that affect the function of phagocytic leukocytes and the nature of cidal mechanisms at the molecular level This volume is organized into six sections encompassing 33 chapters and begins with an overview of Ilya Ilich Metchnikoff's life as well as his scientific contributions particularly in the area of bacteriology and his research on mesodermal amoeboid cells The next chapters focus on the mechanism of phagocytosis with reference to aspects of cell membrane cell movement and ingestion The reader is methodically introduced to the biochemical aspects of phagocytosis from molecular modulations to energetics oxygen radicals and enzymes The discussion then shifts to macrophages their function in antigen recognition receptor mediated endocytosis in macrophage cell hybrids and the role of phagocytosis in macrophage activation The remaining chapters examine the cidal mechanisms of phagocytic leukocytes and aspects of inflammation This book will be of interest to scientists and researchers in fields such as biology biochemistry immunology pathology pharmacology and physiology

**Genetic and Phenotypic Markers of Tumors** Stuart A. Aaronson, 2012-12-06 The study of tumor markers is not only one of the most important but also one that offers one of the richest perspectives in biology and clinical oncology The aim of scientists in this field is to adduce evidence of a property that is typical of and exclusive to tumor cells and which is easy to determine in order to immediately recognize or even better to foresee neoplastic transformations Unfortunately despite the large number of scientists and laboratories engaged in this work the ideal tumor marker has not yet been identified However it is worth noting that new trends in molecular biology and immunovirology have recently opened up new avenues that may lead to the eventual resolution of this problem In this book different approaches to the identification of tumor markers from the points of view of biochemistry immunology and molecular biology are compared in order to explore possible interrelationships and to stimulate scientific collaboration among scientists active in these fields both in basic research and in clinical applications We

**Pharmacology** Herman Friedman, Mario R. Escobar, Sherwood M. Reichard, 1980 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate

system of cells and molecular moieties derived from those cells which constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless because of historical developments and current interest in the subject by investigators from many diverse areas it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies.
