## Head / Ears

- Head is proportionally large compared to the body
- Neck muscles underdeveloped
- Ears / Eustachian tubes are prone to being blocked and getting infected

## Cardiac

- Heart transitions from fetal circulation to normal circulation unless a malformation or defect occurs

## Immunity

- Immature immune system - will still rely on mother's breast milk for immune support and will provide passive immunity for longer
- Lower immune response allows disease or illness to go unnoticed for longer (in some cases)
- Immunity will increase as exposure is increased

## Skin

- Heat loss risk due to thin skin and vasculature close to the skin surface

## Brain / Spinal/Nervous system

- Bones are not fused / Fontanelles and Suture lines allow for the brain growth and skull expansion
- This makes the risk for brain damage / trauma high
- Spine is flexible and not well protected by muscles - ↑ risk for injury
- Myelination continues to develop rapidly for the first 2 years and happens from head to toe

## Respiratory

- Airways are narrow - edema is more lethal
- Airways are not ridged until cartilage develops
- Nose breathers
- High O<sub>2</sub> required due to high Metabolic rate

## Kidneys

- Large vs size
- Lower GFR - ↓ concentration ↓ reabsorption
- Higher risk for dehydration
