Phantoms in the Brain V. S. Ramachandran, 1998 **Phantoms in the Brain**, 2005 **Naked Seeing** Christopher Hatchell, 2014 Buddhism is in many ways a visual tradition with its well known practices of visualization its visual arts its epistemological writings that discuss the act of seeing and its literature filled with images and metaphors of light Some Buddhist traditions are also visionary advocating practices by which meditators seek visions that arise before their eyes *Naked Seeing* investigates such practices in the context of two major esoteric traditions the Wheel of Time Kalacakra and the Great Perfection Dzogchen Both of these experimented with sensory deprivation and developed yogas involving long periods of dwelling in dark rooms or gazing at the open sky These produced unusual experiences of seeing which were used to pursue some of the classic Buddhist questions about appearances emptiness and the nature of reality Along the way these practices gave rise to provocative ideas and suggested that rather than being apprehended through internal insight religious truths might also be seen in the exterior world realized through the gateway of the eyes Christopher Hatchell presents the intellectual and literary histories of these practices and also explores the meditative techniques and physiology that underlie their distinctive visionary experiences The book also offers for the first time complete English translations of three major Tibetan texts on visionary practice a Kalacakra treatise by Yumo Mikyo Dorj The Lamp Illuminating Emptiness a Nyingma Great Perfection work called The Tantra of the Blazing Lamps and a B n Great Perfection work called Advice on the Six Lamps along with a detailed commentary on this by Drugom Gyalwa Yungdrung

[The Science Review Article](#) Judy Noguchi, 2006 This volume presents the science review article as an opportune genre for introducing rhetorical diversity into scientific communities First it discusses the theoretical issues involved in applying the notion of a discourse community to that of an international science discourse community and examines the practical issues faced by writers who must use a language system that is not their mother tongue in order to become active participants The review article is argued to be important in shaping the views of scientific discourse communities Next based on specialist informant and linguistic findings review articles are classified into four different types according to their focus history status quo theory model or issue Finally practical suggestions for teaching how to write a review article are offered based on a framework of Moves and Steps which can be expanded to the teaching of other genres

Human Investment Management Prabhakaran Paleri, 2017-08-30 This book presents a thought provoking case for looking at human resource management from an entirely different perspective In the modern world organizations have to

optimally manage resources to achieve the best results and the best way to do this is to identify humans as instruments of investment and not as resources. Humans use resources in an activity. Managing people as a subject was first studied as part of personnel management and became known as human resource management (HRM) in the early 80s. However, the basic principles remained largely unchanged. The book argues that it is time that HRM is replaced by human investment management (HIM) where the entire approach of employee management in an organization shifts gears to human investment in activities. In this approach, no human is considered bad in relation to an organization if selected appropriately and trained well. Everyone is productive though the returns may differ. Humans can be invested in areas where they are best or can be trained to be the best according to various factors. Unlike any other investment instruments, humans' value can be continuously upgraded for higher returns. Thus, the core of HIM is to maximize the return from each employee as an individual or as a member of the group with minimum expenditure and effort in him or her. HIM can therefore reengineer and replace HRM slowly and steadily at the desired pace where maximum attention is paid to employee investment for improved results. This is unlike HRM which primarily focuses on employee relations. Turning around HRM to HIM will be the first step in inclusively aligning strategic human resource management with the overall human management. As such, HIM should be seen as a process by which the asset or capital value of individual humans can be increased by turning them into capital humans, an entirely different outlook from the oft-used term human capital.

Somatic States Franck Billé, 2025-02-28. In Somatic States, Franck Billé examines the conceptual link between the nation state and the body, particularly the visceral and affective attachment to the state and the symbolic significance of its borders. Billé argues that corporeal analogies to the nation state are not simply poetic or allegorical but reflect a genuine association of the individual body with the national outline, an identification greatly facilitated by the emergence of the national map. Billé charts the evolution of cartographic practices and the role that political maps have played in transforming notions of territorial sovereignty. He shows how states routinely and effectively mobilize corporeal narratives such as framing territorial loss through metaphors of dismemberment and mutilation. Despite the current complexity of geopolitics and neoliberalism, Billé demonstrates that corporeality and bodily metaphors remain viscerally powerful because they offer a seemingly simple way to apprehend the abstract nature of the nation state.

Don't Believe Everything You Think Thomas E. Kida, 2009-09-25. Do you believe that you can consistently beat the stock market if you put in the effort that some people have? Extrasensory perception, that crime and drug abuse in America are on the rise. Many people hold one or more of these beliefs, although research shows that they are not true. And it's no wonder since advertising and some among the media promote these and many more questionable notions. Although our creative problem-solving capacity is what has made humans the successful species we are, our brains are prone to certain kinds of errors that only careful critical thinking can correct. This enlightening book discusses how to recognize faulty thinking and develop the necessary skills to become a more effective problem solver. Author Thomas Kida identifies the six

pack of problems that leads many of us unconsciously to accept false ideas We prefer stories to statistics We seek to confirm not to question our ideas We rarely appreciate the role of chance and coincidence in shaping events We sometimes misperceive the world around us We tend to oversimplify our thinking Our memories are often inaccurate Kida vividly illustrates these tendencies with numerous examples that demonstrate how easily we can be fooled into believing something that isn't true In a complex society where success in all facets of life often requires the ability to evaluate the validity of many conflicting claims the critical thinking skills examined in this informative and engaging book will prove invaluable

THE TELL-TALE BRAIN V.S. Ramachandran,2010-12 A patient in San Francisco becomes progressively demented yet starts creating paintings that are hauntingly beautiful Has his brain damage somehow unleashed a hidden talent Is there a Picasso a Mozart and a Ramanujan in all of us Who is this woman in the mirror who is always following me asks a woman whenever she sees her reflection in the mirror Like vampires she is terrified of mirrors Why Whenever Shirley looks at a number she sees it tinged with a particular colour 5 is red 2 is green etc This condition called synesthesia is eight times more common in artists poets and novelists suggesting that it may be linked to creativity in some mysterious way The brain remains a mystery to us How can a three pound mass of jelly that we can hold in our palm imagine angels contemplate the meaning of infinity and even question its own place in the cosmos How can one study such a mystery Eminent neuroscientist Professor V S Ramachandran takes us on a fascinating journey into the human brain studying patients who exhibit bizarre symptoms and using them to understand the functions of the normal brain Along the way he asks big questions How did abstract thinking evolve What is art Why do we laugh How are these hardwired in the neural mechanisms of the human brain and why did they evolve Brilliant lucid and utterly compelling The Tell Tale Brain is a pathbreaking book from one of the leading neuroscientists today

Film, Art, and the Third Culture Murray Smith,2017-03-24 In the mid 1950s C P Snow began his campaign against the two cultures the debilitating divide as he saw it between traditional literary intellectual culture and the culture of the sciences urging in its place a third culture which would draw upon and integrate the resources of disciplines spanning the natural and social sciences the arts and the humanities Murray Smith argues that with the ever increasing influence of evolutionary theory and neuroscience and the pervasive presence of digital technologies Snow's challenge is more relevant than ever Working out how the scientific and everyday images of the world hang together is no simple matter In *Film Art and the Third Culture* Smith explores this question in relation to the art technology and science of film in particular and to the world of the arts and aesthetic activity more generally In the first part of his book

Smith explores the general strategies and principles necessary to build a third cultural or naturalized approach to film and art one that roots itself in an appreciation of scientific knowledge and method Smith then goes on to focus on the role of emotion in film and the other arts as an extended experiment in the third cultural integration of ideas on emotion spanning the arts humanities and sciences While acknowledging that not all of the questions we ask are scientific in nature Smith contends that we cannot disregard the insights wrought by taking a naturalized approach to the aesthetics of film and the other arts

Phantom Limb Cassandra Crawford, 2014-01-20 Phantom limb pain is one of the most intractable and merciless pains ever known a pain that haunts appendages that do not physically exist often persisting with uncanny realness long after fleshy limbs have been traumatically surgically or congenitally lost The very existence and naturalness of this pain has been instrumental in modern science's ability to create prosthetic technologies that many feel have transformative self actualizing and even transcendent power In *Phantom Limb* Cassandra S Crawford critically examines phantom limb pain and its relationship to prosthetic innovation tracing the major shifts in knowledge of the causes and characteristics of the phenomenon Crawford exposes how the meanings of phantom limb pain have been influenced by developments in prosthetic science and ideas about the extraordinary power of these technologies to liberate and fundamentally alter the human body mind and spirit Through intensive observation at a prosthetic clinic interviews with key researchers and clinicians and an analysis of historical and contemporary psychological and medical literature she examines the modernization of amputation and exposes how medical understanding about phantom limbs has changed from the late 19th to the early 21st century Crawford interrogates the impact of advances in technology medicine psychology and neuroscience as well as changes in the meaning of limb loss popular representations of amputees and corporeal ideology *Phantom Limb* questions our most deeply held ideas of what is normal natural and even moral about the physical human body

The Tell-Tale Brain: A Neuroscientist's Quest for What Makes Us Human V. S. Ramachandran, 2011-01-17 A profoundly intriguing and compelling guide to the intricacies of the human brain Oliver Sacks In this landmark work V S Ramachandran investigates strange unforgettable cases from patients who believe they are dead to sufferers of phantom limb syndrome With a storyteller's eye for compelling case studies and a researcher's flair for new approaches to age old questions Ramachandran tackles the most exciting and controversial topics in brain science including language creativity and consciousness

Systematic Changes in Body Image Following Formation of Phantom Limbs Nobuyuki Inui, 2016-06-30 This book presents new findings on body image and also introduces new neuroscience based methods for the fields of neurology and neurorehabilitation Even when the hand is stationary we know its position information that is needed by the brain to plan movements If the sensory input from a limb is removed as the result of an accident or as part of an experiment with local anesthesia then a phantom limb commonly develops We used ischemic anesthesia of one limb to study the mechanisms that define this phenomenon Surprisingly if the fingers wrist elbow ankle and knee are extended before and during an ischemic

block then the perceived limb is flexed at the joint and vice versa Furthermore the limb is perceived to move continuously with no default position The key parameter for these illusory changes in limb position is the difference in discharge rates between afferents in the flexor and extensor muscles at a joint The final position of the phantom limb depends on its initial position suggesting that a body image uses incoming proprioceptive information for determination of starting points and endpoints when generating movements In addition the change in position does not involve limb postures that are anatomically impossible suggesting that illusory posture is constrained by body maps These results provide new information about how the brain generates phantom limbs

Making up the Mind Chris Frith, 2013-05-20 Written by one of the world's leading neuroscientists Making Up the Mind is the first accessible account of experimental studies showing how the brain creates our mental world Uses evidence from brain imaging psychological experiments and studies of patients to explore the relationship between the mind and the brain Demonstrates that our knowledge of both the mental and physical comes to us through models created by our brain Shows how the brain makes communication of ideas from one mind to another possible

Understanding Suicide and Its Prevention Federico Sanchez, 2010-06-15 Finally a book that explains suicide using the latest research in suicidology A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular This is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders The author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community's standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in everyday language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions

and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnesic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

Phantom Pains and Prosthetic Narratives Alastair Minnis, 2021-02-18 Phantom limb pain designates the sensations which seem to emanate from limbs that in reality are missing The phrase was coined by the American Civil War surgeon Weir Mitchell in reference to his fictional amputee George Dedlow Contemporary neuroscience holds that the brain encloses a schema which covers the whole body and asserts its unity even if certain parts are missing Reading backwards from Dedlow's sufferings Alastair Minnis traces the medieval precedents and parallels focusing on Augustine and Dante who subscribed to the notion of a body in the soul Dante's souls in purgatory self prosthesize with aerial phantoms as they long for the full embodiment which only the resurrection can bring Is a complete body necessary for personhood And how can the gamut of human feelings be run if parts or the entirety of one's body does not exist Combining medieval studies and contemporary neuroscience this absorbing study explores the fascinating and surprising history of phantom pain **Idothea** Joseph Salyards, 1874
