The Army of the Roman Republic Mike Dobson,2007-02-08 The main source of archaeological evidence for Late Roman Republican camps is a complex of installations around the Iberian city of Numantia in Spain excavated by Adolf Schulten in the early 1900s This book reassesses Schulten and concludes that much of his interpretation is questionable Radically different alternative reconstructions making use of recent fieldwork are presented for several of the sites A discussion of dating evidence leads to alternative dates being offered for some of the camps To aid interpreting the sites army organisation and art of encampment for the period of the Numantine Wars is discussed This study gives added importance to the sites at Numantia for they not only form the main source of archaeological evidence for Late Republican camps but provide evidence for the form of camp for both the late manipular army and the early cohort one **Wild Geese** M. A. Ogilvie,2010-11-30 In range Wild Geese covers the geese of North America Europe and Asia and thus the world species except for the Hawaiian Goose or Ne Ne The plan of the book is similar to the author s Ducks of Britain and Europe but distribution status and migration rightly assume a more extensive role in Wild Geese and the detailed text on those subjects is fully complemented by migration and distribution maps Comprehensive chapters are also devoted to classification ecology breeding identification and to exploitation and conservation The identification chapter is especially helpful with sections on adult and first winter birds downy young plumage variants and voice for each species and sub species as well as guidance on ageing and sexing geese in the field The text is effectively supported by 16 identification plates in colour by Carol Ogilvie showing details of heads and bills as well as all species in flight and on the ground and downy young The author is an established authority on ducks and geese and has been a research scientist at the Wildfowl Trust Slimbridge England since 1960 **Cyber Denial, Deception and Counter Deception** Kristin E. Heckman, Frank J. Stech, Roshan K. Thomas, Ben Schmoker, Alexander W. Tsow, 2015-11-13 This book presents the first reference exposition of the Cyber Deception Chain a flexible planning and execution framework for creating tactical operational or strategic deceptions This methodology bridges the gap between the current uncoordinated patchwork of tactical denial and deception D D techniques and their orchestration in service of an organization s mission Concepts for cyber D D planning operations and management are detailed within the larger organizational business and cyber defense context It examines the necessity of a comprehensive active cyber denial scheme The authors explain the organizational implications of integrating D D with a legacy cyber strategy and discuss trade offs maturity models and lifecycle management Chapters present the primary challenges in using deception as part of a security strategy and guides users through the steps to overcome common obstacles Both revealing and concealing fact and fiction have a critical role in securing private information Detailed case studies are included Cyber Denial Deception and Counter Deception is designed as a reference for professionals researchers and government employees

Vladimir Belyakov,2019-08-02 This book presents recent theoretical and experimental results of localized optical modes and low threshold lasing in spiral photonic media Efficient applications of localized modes for low threshold lasing at the frequencies of localized modes are a central topic of the book s new chapters Attention is paid to the analytical approach to the problem The book focuses on one of the most extensively studied media in this field cholesteric liquid crystals The chosen model in the absence of dielectric interfaces allows to remove the problem of polarization mixing at surfaces layers and defect structures It allows to reduce the corresponding equations to the equations for light of diffracting polarization only The problem concentrates then on the edge and defect optical modes The possibility to reduce the lasing threshold due to an anomalously strong absorption effect is presented theoretically for distributed feedback lasing It is shown that a minimum of the threshold pumping wave intensity can be reached for the pumping wave frequency coinciding with the localized mode frequency what can be reached for a pumping wave propagating at a certain angle to the helical axes Analytic expressions for transmission and reflection coefficients are presented In the present second edition experimental observations of theoretically revealed phenomena in spiral photonic media are discussed The main results obtained for spiral media are qualitatively valid for photonic crystals of any nature and therefore may be applied as a guide to investigations of other photonic crystals where the corresponding theory is more complicated and demands a numerical approach It is demonstrated that many optical phenomena occurring at the frequencies of localized modes reveal unusual properties which can be used for efficient applications of the corresponding phenomena efficient frequency conversion and low threshold lasing e g For the convenience of the reader an introduction is given to conventional linear and nonlinear optics of structured periodic media This book is valuable to researchers postgraduate and graduate students active in theoretical and experimental physics in the field of interaction of radiation with condensed matter Proceedings of the American Academy of Arts and Letters and the National Institute of Arts and Letters American Academy of Arts and Letters,1910

Proceedings of the American Academy and Institute of Arts and Letters American Academy and Institute of Arts and Letters,1913 **Neuroscience Fundamentals for Communication Sciences and Disorders, Second Edition**

Richard D. Andreatta,2022-10-13 Neuroscience Fundamentals for Communication Sciences and Disorders Second Edition is a comprehensive textbook primarily designed for undergraduate neural bases or graduate neuroscience courses in communication sciences and disorders programs CSD The text can also be used as an accessible go to reference for speech language pathology and audiology clinical professionals practicing in medical and rehab settings Written with an engaging

and conversational style the author uses humor and analogies to explain concepts that are often challenging for students. Complemented by more than 400 visually rich and beautifully drawn full color illustrations the book emphasizes brain and behavior relationships while also ensuring coverage of essential neuroanatomy and neurophysiology in an integrative fashion. With a comprehensive background in the principles, processes and structures underlying the workings of the human nervous system, students and practitioners alike will be able to better understand and apply brain-behavior relationships to make appropriate clinical assessments and treatment decisions. Extending well beyond traditional neuroanatomy-based textbooks, this resource is designed to satisfy three major goals: Provide neuroanatomical and neurophysiological detail that meets the real-world needs of the contemporary CSD student as they move forward toward clinical practice and into the future where advancements in the field of health and brain sciences are accelerating and contributing more and more each day to all areas of rehabilitation; Provide clear, understandable explanations and intuitive material that explains how and why neuroanatomical systems, processes and mechanisms of the nervous system operate as they do during human behavior; Provide a depth and scope of material that will allow the reader to better understand and appreciate a wide range of evidence-based literature related to behavior, cognition, emotion, language and sensory perception areas that all directly impact treatment decisions.

New to the Second Edition: 40 new full color illustrations; Reorganization and division of content from Chapters 4, 5 and 6 of the previous edition into six new and more digestible chapters; A new standalone chapter on the cranial nerves; Addition of a major section and discussion on the neural bases of swallowing; Addition of more summary tables and process flowcharts to simplify the text and provide ready-made study materials for students; Revisions to most figures to improve their clarity and coherence with the written material.

Mössbauer Effect Methodology Irwin J. Gruverman, Carl W. Seidel, 2012-12-06. This is the eighth volume of a continuing series intended to provide a forum for publication of developments in Mossbauer effect methodology and in spectroscopy and its applications. Mossbauer Effect Methodology Volume 8 records the proceedings of the Eighth Symposium on Mossbauer Effect Methodology. The symposium was sponsored by the New England Nuclear Corporation with emphasis on application and some attention to spectroscopy and methodology. The Symposium was held in the Mercury Ballroom of the New York Hilton on January 28, 1973. Dr. J. J. Zuckerman presided over the afternoon and evening sessions. Almost two hundred participants attended despite the pressures of travel budget limitations, indicating a continuing high level of interest in the field. Contributing Sponsors were Austin Science Associates, Elron Nuclear Science Instruments and Ranger Electronics. The Mossbauer equipment demonstrated by these organizations continued to evolve and improve year by year and was well received by symposium participants. A one-year break in the symposium series resulted in submission of a very large number of papers. A Selection Committee was formed and selected 16 papers for inclusion in the symposium. Regrettably, many worthwhile papers

could not be included Applications were stressed

Trail Running Graeme Hilditch, 2014-05-22 Trail Running helps advise runners how to make the transition from road running to off road running whether your intention is purely for fun or to take part in specialist off road events The popularity of running has never been greater and with thousands of everyday people taking in conventional 5k 10k half marathon and marathon road running events there seems to be a natural desire to seek other arguably more challenging forms of running Including Information about the importance of specialist running gear required Specialist exercises to strengthen stabilising muscles e g glutes core to counteract the uneven running surface and prevent injury Nutritional requirements particularly for long distance trail runs and the importance of the correct fluid and food to carry with you Common injuries contracted during trail running and how to prevent treat them List of popular trail running events both national and International Examples of training sessions and how certain sessions can help improve the highly specific fitness requirements of off road running

Towards an Integrated Approach to Measurement, Analysis and Modeling of Cortical Networks A. Ravishankar Rao, Guillermo A. Cecchi, Ehud Kaplan, 2016-03-17 The amount of data being produced by neuroscientists is increasing rapidly driven by advances in neuroimaging and recording techniques spanning multiple scales of resolution The availability of such data poses significant challenges for their processing and interpretation To gain a deeper understanding of the surrounding issues the Editors of this e Book reached out to an interdisciplinary community and formed the Cortical Networks Working Group and the genesis of this e Book thus began with the formation of this Working Group which was supported by the National Institute for Mathematical and Biological Synthesis in the USA The Group consisted of scientists from neuroscience physics psychology and computer science and meetings were held in person A detailed list of the group members is presented in the Editorial that follows At the time we started in 2010 the term big data was hardly in existence though the volume of data we were handling would certainly have qualified Furthermore there was significant interest in harnessing the power of supercomputers to perform large scale neuronal simulations and in creating specialized hardware to mimic neural function We realized that the various disciplines represented in our Group could and should work together to accelerate progress in Neuroscience We searched for common threads that could define the foundation for an integrated approach to solve important problems in the field We adopted a network centric perspective to address these challenges as the data are derived from structures that are themselves network like We proposed three intertwined threads consisting of measurement of neural activity analysis of network structures deduced from this activity and modeling of network function leading to theoretical insights This approach formed the foundation of our initial call for papers When we issued the call for papers we were not sure how many papers would fall into each of these threads We were pleased that we found significant interest in each thread and the number of submissions exceeded our expectations This is an indication that the field of neuroscience is ripe for the type of integration and interchange that we had anticipated We first published a special topics issue after we received a sufficient number of submissions This is now being converted to an e

book to strengthen the coherence of its contributions One of the strong themes emerging in this e book is that network based measures capture better the dynamics of brain processes and provide features with greater discriminative power than point based measures Another theme is the importance of network oscillations and synchrony Current research is shedding light on the principles that govern the establishment and maintenance of network oscillation states These principles could explain why there is impaired synchronization between different brain areas in schizophrenics and Parkinson s patients Such research could ultimately provide the foundation for an understanding of other psychiatric and neurodegenerative conditions The chapters in this book cover these three main threads related to cortical networks Some authors have combined two or more threads within a single chapter We expect the availability of related work appearing in a single e book to help our readers see the connection between different research efforts and spur further insights and research

Ostkrieg Stephen Fritz,2011-10-14 On June 22 1941 Germany launched the greatest land assault in history on the Soviet Union an attack that Adolf Hitler deemed crucial to ensure German economic

and political survival As the key theater of the war for the Germans the eastern front consumed enormous levels of resources and accounted for 75 percent of all German casualties Despite the significance of this campaign to Germany and to the war as a whole few English language publications of the last thirty five years have addressed these pivotal events In Ostkrieg Hitler s War of Extermination in the East Stephen G Fritz bridges the gap in scholarship by incorporating historical research from the last several decades into an accessible comprehensive and coherent narrative His analysis of the Russo German War from a German perspective covers all aspects of the eastern front demonstrating the interrelation of military events economic policy resource exploitation and racial policy that first motivated the invasion This in depth account challenges accepted notions about World War II and promotes greater understanding of a topic that has been neglected by historians *The American Journal of Psychology* Granville Stanley Hall,Edward Bradford Titchener,Karl M.
