Phenomenal Consciousness A Naturalistic Theory:

Phenomenal Consciousness Peter Carruthers, 2003-10-30 How can phenomenal consciousness exist as an integral part of a physical universe How can the technicolour phenomenology of our inner lives be created out of the complex neural activities of our brains Many have despaired of finding answers to these questions and many have claimed that human consciousness is inherently mysterious Peter Carruthers argues on the contrary that the subjective feel of our experience is fully explicable in naturalistic scientifically acceptable terms Drawing on a variety of interdisciplinary resources he develops and defends a novel account in terms of higher order thought He shows that this can explain away some of the more extravagant claims made about phenomenal consciousness while substantively explaining the key subjectivity of our experience Written with characteristic clarity and directness and surveying a wide range of extant theories this book is essential reading for all those within philosophy and psychology interested in the problem of consciousness

Self-involving Representationalism (SIR) Miguel Ángel Sebastián González, 2011 *How Matter Becomes Conscious* Jan Faye, 2019-04-11 This innovative book proposes a unique and original perspective on the nature of the mind and how phenomenal consciousness may arise in a physical world From simple sentient organisms to complex self reflective systems Faye argues for a naturalistic evolutionary approach to philosophy of mind and consciousness Drawing on substantial literature in evolutionary biology and cognitive science this book offers a promising alternative to the major theories of the mind body problem the quality of our experiences should not as some philosophers have claimed be associated with subjectivity that is not open for scientific explanation nor should it be associated with intrinsic properties of the brain Instead Faye argues that mental properties are extrinsic properties of the brain caused by the organism s interaction with its environment Taking on the explanatory gap and rejecting the ontological pluralism of present naturalist theories of the mind Faye thus proposes a unified view of reality in which it is possible to explain qualitative mental presentations as part of the physical world *The Bloomsbury Companion to the Philosophy of Consciousness* Dale Jacquette, 2018-01-25 From Descartes and Cartesian mind body dualism in the 17th century through to 21st century concerns about artificial intelligence programming *The Bloomsbury Companion to the Philosophy of Consciousness* presents a compelling history and up to date overview of this burgeoning subject area Acknowledging that many of the original concepts of consciousness studies are found in writings of past thinkers it begins with introductory overviews to the thought of Descartes through to Kant covering Brentano s restoration of empiricism to philosophical psychology and the major figures of the late 19th and early 20th centuries Russell Wittgenstein Ryle and James These opening chapters on the forces in the history of consciousness lay the groundwork needed to understand how influential contemporary thinkers in the philosophy of mind interpret the concept of consciousness Featuring leading figures in the field Part II discusses current issues in a range of topics progressing from the so called hard problem of understanding the nature of consciousness to the methodology of invoking the possibility of

philosophical zombies and the prospects of reductivism in philosophy of mind Part III is dedicated to new research directions in the philosophy of consciousness including chapters on experiment objections to functionalism and the scope and limits of artificial intelligence Equipped with practical research resources including an annotated bibliography a research guide and a glossary *The Bloomsbury Companion to the Philosophy of Consciousness* is an authoritative guide for studying the past present and future of consciousness *Consciousness Inside and Out: Phenomenology, Neuroscience, and the Nature of Experience* Richard Brown, 2013-08-23 This volume is product of the third online consciousness conference held at <http://consciousnessonline.com> in February and March 2011 Chapters range over epistemological issues in the science and philosophy of perception what neuroscience can do to help us solve philosophical issues in the philosophy of mind what the true nature of black and white vision pain auditory olfactory or multi modal experiences are to higher order theories of consciousness synesthesia among others Each chapter includes a target article commentaries and in most cases a final response from the author Though wide ranging all of the papers aim to understand consciousness both from the inside as we experience it and from the outside as we encounter it in our science The Online Consciousness Conference founded and organized by Richard Brown is dedicated to the rigorous study of consciousness and mind The goal is to bring philosophers scientists and interested lay persons together in an online venue to promote high level discussion and exchanging of views ideas and data related to the scientific and philosophical study of consciousness *The Blackwell Companion to Consciousness* Susan Schneider, Max Velmans, 2017-03-16 Updated and revised the highly anticipated second edition of *The Blackwell Companion to Consciousness* offers a collection of readings that together represent the most thorough and comprehensive survey of the nature of consciousness available today Features updates to scientific chapters reflecting the latest research in the field Includes 18 new theoretical empirical and methodological chapters covering integrated information theory renewed interest in panpsychism and more Covers a wide array of topics that include the origins and extent of consciousness various consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness Presents 54 peer reviewed chapters written by leading experts in the study of consciousness from across a variety of academic disciplines **Zombies and Consciousness** Robert Kirk, 2007 Zombies would be physically and behaviorally just like us but not conscious a strange idea which is currently highly influential in the philosophy of mind In this clear readable and entertaining book Robert Kirk argues that the zombie idea reflects a fundamentally mistaken way of thinking about consciousness He sets out both to show why there couldn't be zombies and to present a strikingly original new argument about the true nature of conscious experience [Higher-order Theories of Consciousness](#) Rocco J. Gennaro, 2004-01-01 Higher Order HO theories of consciousness have in common the idea that what makes a mental state conscious is that it is the object of some kind of higher order representation This volume presents fourteen previously unpublished essays both defending and criticizing this approach to the problem of consciousness It is the first anthology

devoted entirely to HO theories of consciousness There are several kinds of HO theory such as the HOT higher order thought and HOP higher order perception models and each is discussed and debated Part One contains essays by authors who defend some form of HO theory Part Two includes papers by those who are critics of the HO approach Some of the topics covered include animal consciousness misrepresentation the nature of pain subvocal speech subliminal perception blindsight the nature of emotion the difference between perception and thought first order versus higher order theories of consciousness and the relationship between nonconscious and conscious mentality Series A *Illusionism* Keith Frankish, 2017-11-14

Illusionism is the view that phenomenal consciousness in the philosophers sense is an illusion This book is a reprint of a special issue of the Journal of Consciousness Studies devoted to this topic It takes the form of a target paper by the editor followed by commentaries from various thinkers including leading defenders of the theory such as Daniel Dennett Nicholas Humphrey Derk Pereboom and Georges Rey A number of disciplines are represented and different viewpoints are discussed and defended The collection is tied together with a response to the commentaries from the editor **Social Roots of**

Feinberg, Jon M. Mallatt, 2016-03-25

How consciousness appeared much earlier in evolutionary history than is commonly assumed and why all vertebrates and perhaps even some invertebrates are conscious How is consciousness created When did it first appear on Earth and how did it evolve What constitutes consciousness and which animals can be said to be sentient In this book Todd Feinberg and Jon Mallatt draw on recent scientific findings to answer these questions and to tackle the most fundamental question about the nature of consciousness how does the material brain create subjective experience After assembling a list of the biological and neurobiological features that seem responsible for consciousness and considering the fossil record of evolution Feinberg and Mallatt argue that consciousness appeared much earlier in evolutionary history than is commonly assumed About 520 to 560

million years ago they explain the great Cambrian explosion of animal diversity produced the first complex brains which were accompanied by the first appearance of consciousness simple reflexive behaviors evolved into a unified inner world of subjective experiences From this they deduce that all vertebrates are and have always been conscious not just humans and other mammals but also every fish reptile amphibian and bird Considering invertebrates they find that arthropods including insects and probably crustaceans and cephalopods including the octopus meet many of the criteria for consciousness The obvious and conventional wisdom shattering implication is that consciousness evolved simultaneously but independently in the first vertebrates and possibly arthropods more than half a billion years ago Combining evolutionary neurobiological and philosophical approaches allows Feinberg and Mallatt to offer an original solution to the hard problem of consciousness

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon **Consciousness** Peter

Carruthers, 2005-05-26 Peter Carruthers's essays on consciousness and related issues have had a substantial impact on the field and many of his best are now collected here in revised form The first half of the volume is devoted to developing elaborating and defending against competitors one particular sort of reductive explanation of phenomenal consciousness which Carruthers now refers to as dual content theory Phenomenal consciousness the feel of experience is supposed to

constitute the hard problem for a scientific world view and many have claimed that it is an irredeemable mystery But Carruthers here claims to have explained it He argues that phenomenally conscious states are ones that possess both an analog fine grained intentional content and a corresponding higher order analog content representing the first order content of the experience It is the higher order analog content that enables our phenomenally conscious experiences to present themselves to us and that constitutes their distinctive subjective aspect or feel The next two chapters explore some of the differences between conscious experience and conscious thought and argue for the plausibility of some kind of eliminativism about conscious thinking while retaining realism about phenomenal consciousness Then the final four chapters focus on the minds of non human animals Carruthers argues that even if the experiences of animals aren't phenomenally conscious as his account probably implies this needn't prevent the frustrations and sufferings of animals from being appropriate objects of sympathy and concern Nor need it mean that there is any sort of radical Cartesian divide between our minds and theirs of deep significance for comparative psychology In the final chapter he argues provocatively that even insects have minds that include a belief desire perception psychology much like our own So mindedness and phenomenal consciousness couldn't be further apart Carruthers's writing throughout is distinctively clear and direct The collection will be of great interest to anyone working in philosophy of mind or cognitive science

Introducing consciousness The Open University, This 20 hour free course introduced consciousness and some of the difficulties consciousness presents to science and philosophy *Ignorance and Imagination : The Epistemic Origin of the Problem of Consciousness* Research School of Social Sciences The Australian National University Daniel Stoljar Senior Fellow, 2006-05-01 Ignorance and Imagination advances a novel way to resolve the central philosophical problem about the mind how it is that consciousness or experience fits into a larger naturalistic picture of the world The correct response to the

problem Stoljar argues is not to posit a realm of experience distinct from the physical nor to deny the reality of phenomenal experience nor even to rethink our understanding of consciousness and the language we use to talk about it. Instead we should view the problem itself as a consequence of our ignorance of the relevant physical facts. Stoljar shows that this change of orientation is well motivated historically, empirically and philosophically and that it has none of the side effects it is sometimes thought to have. The result is a philosophical perspective on the mind that has a number of far reaching consequences for consciousness studies, for our place in nature and for the way we think about the relationship between philosophy and science.

The Blackwell Companion to Consciousness Max Velmans, Susan Schneider, 2008-04-15. With fifty-five peer-reviewed chapters written by the leading authors in the field. The Blackwell Companion to Consciousness is the most extensive and comprehensive survey of the study of consciousness available today. Provides a variety of philosophical and scientific perspectives that create a breadth of understanding of the topic. Topics include the origins and extent of consciousness, different consciousness experiences such as meditation and drug-induced states, and the neuroscience of consciousness.

Phenomenology and the Physical Reality of Consciousness Arthur Melnick, 2011. The predominant positive view among philosophers and scientists alike is that consciousness is something realized in brain activity. This view, however, largely fails to capture what consciousness is like according to how it shows itself to conscious beings. What this work proposes instead is that consciousness is a phenomenon that exists in and throughout the body. Apart from whether or not it involves intentionality and apart from whether or not it involves awareness of the self, consciousness is self-intimating, self-revealing, self-disclosing. Self-disclosure is the definitive phenomenological character of consciousness in all its forms. Taking this stance as a point of departure, the book presents a specific account of what bodily field phenomenon consciousness is. In this way, the current stalemate in philosophy over the question of the physical reality of consciousness is broken. Series A.

Ethical Issues in Behavioral Neuroscience Grace Lee, Judy Illes, Frauke Ohl, 2015-02-09. Behavioral neuroscience encompasses the disciplines of neurobiology and psychology to study mechanisms of behavior. This volume provides a contemporary overview of the current state of how ethics informs behavioral neuroscience research. There is dual emphasis on ethical challenges in experimental animal approaches and in clinical and nonclinical research involving human participants.

Sensory Integration and the Unity of Consciousness David Bennett, Christopher Hill, 2022-06-07. Philosophers and cognitive scientists address the relationships among the senses and the connections between conscious experiences that form unified wholes. In this volume, cognitive scientists and philosophers examine two closely related aspects of mind and mental functioning: the relationships among the various senses and the links that connect different conscious experiences to form unified wholes. The contributors address a range of questions concerning how information from one sense influences the processing of information from the other senses and how unified states of consciousness emerge from the bonds that tie conscious experiences together. *Sensory Integration and the Unity of Consciousness* is the first book to address both of these

topics integrating scientific and philosophical concerns A flood of recent work in both philosophy and perception science has challenged traditional conceptions of the sensory systems as operating in isolation Contributors to the volume consider the ways in which perceptual contact with the world is or may be multisensory discussing such subjects as the modeling of multisensory integration and philosophical aspects of sensory modalities Recent years have seen a similar surge of interest in unity of consciousness Contributors explore a range of questions on this topic including the nature of that unity the degree to which conscious experiences are unified and the relationship between unified consciousness and the self Contributors Tim Bayne David J Bennett Berit Brogaard Barry Dainton Ophelia Deroy Frederique de Vignemont Marc Ernst Richard Held Christopher S Hill Geoffrey Lee Kristan Marlow Farid Masrour Jennifer Matey Casey O Callaghan Cesare V Parise Kevin Rice Elizabeth Schechter Pawan Sinha Julia Trommershaeuser Loes C J van Dam Jonathan Vogel James Van Cleve Robert Van Gulick Jonas Wulff
