## Phenomenon Of Life:

The Phenomenon of Life Hans Jonas,1968      **The Phenomenon of Life** Hans Jonas,1966      **Chemical Phenomena in Life** Friedrich Czappek,1911      Self and the Phenomenon of Life Ramon Lim,2017 The book describes a common ground between the biology of life and the humanity of life without compromising either discipline It attempts to bridge the gap between our two cultures the sciences and the humanities as advocated by C P Snow fifty years ago This book connects our meager existence to the entire living world and the universe physically and spiritually through the simple perspective of self being defined as a system that seeks its own perpetuation Publisher s website      *The Topological Model of Genome and Evolution* Pradeep Chhaya,2023-09-19 This book deals with the missing link in the domain of functional genomics viz genomic architecture It begins with a deconstruction of the Darwinian paradigm using the proposed model of modified involuted manifolds It recasts the process of natural selection as a process of information transfer Using a topological model this book outlines a new genomic architecture The key argument for this proposed model is that some such structuralism has always been implicit in genomics The proposed model fits very well with the known genomic characteristics and allows to separate the regulatory genome from the transcriptive genomes The model is capable of discerning modular architecture of genomes with different genomic functionalities existing in hierarchical relationships and demonstrates that genomes act as units of selection and as the environment for the individual genes which act as competing species Towards the end the book also examines the role of genomic evolution in cancer and the principles of natural selection and evolution of the genotype The regulatory genome is also discussed with an emphasis on its evolution and natural selection It is a valuable source for researchers working in functional genomics mathematical modeling in biology and evolutionary genomics      *The Origin of Life* John Butler Burke,1906      **Theology, Science and Life** Carmody Grey,2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science Theology Science and Life proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology      The Breath of Life John Burroughs,1915 This is a pre 1923 historical reproduction that was curated for quality Quality assurance was conducted on each of these books in an attempt to remove books with imperfections introduced by the digitization process Though we have made best efforts the books may have occasional errors that do not impede the reading experience We believe this work is culturally important and

have elected to bring the book back into print as part of our continuing commitment to the preservation of printed works worldwide     Observations on the Phenomena of Plant Life William Smith Clark, 1875     Encountering Life in the Universe Chris Impey, Anna H. Spitz, William Stoeger, 2013-10-25 Are we alone in the universe Are the planets our playground to treat as we will or do we have a responsibility to other creatures who may inhabit or use them Do we have a right to dump trash in space or leave vehicles on Mars or the moon How should we interact with other life forms Encountering Life in the Universe examines the intersection of scientific research and society to further explore the ethics of how to behave in a universe where much is unknown Taking contributions from notable experts in several fields the editors skillfully introduce and develop a broad look at the moral questions facing humans on Earth and beyond Major advances in biology biotechnology and medicine create an urgency to ethical considerations in those fields Astrobiology goes on to debate how we might behave as we explore new worlds or create new life in the laboratory or interact with extraterrestrial life forms Stimulated by new technologies for scientific exploration on and off the Earth astrobiology is establishing itself as a distinct scientific endeavor In what way can established philosophies provide guidance for the new frontiers opened by astrobiology research Can the foundations of ethics and moral philosophy help answer questions about modifying other planets Or about how to conduct experiments to create life in the lab or about How to interact with organisms we might discover on another world While we wait for the first echo that might indicate life beyond Earth astobiologists along with philosophers theologians artists and the general public are exploring how we might behave even before we know for sure they are there Encountering Life in the Universe is a remarkable resource for such philosophical challenges     *Life and Finite Individuality* Herbert Wildon Carr, 1918     **Island Life, Or, The Phenomena and Causes of Insular Faunas and Floras** Alfred Russel Wallace, 1902     **The Miraculous Element in the Gospels** Alexander Balmain Bruce, 1893     **The Philosophy and Phenomenon of Life Defined** Norman, Addison, 1921\*     *Evil and Givenness* Brian W. Becker, 2022-02-23 Evil and Givenness The Thanatonic Phenomenon provides a phenomenological study of evil in its conceptual integrity Describing a phenomenological situation exclusive to evil in its distinct mode of givenness and manners of manifestation the account of evil in this book centers on the thanatonic as that phenomenality proper to evil Although situated within a phenomenology of givenness via Jean Luc Marion the thanatonic is distinguished from saturated phenomena by giving itself in a parasitic mode Brian W Becker identifies four figures as displaying characteristics of this parasitic givenness trauma evil eye foreign body and abject each expressing a dimension of the thanatonic and paralleling the four figures of the saturated phenomenon Like the four horsemen who serve as heralds for the destruction of the world these figures beckon the destruction of our lifeworld diminishing the self who encounters them Upon losing the will to bear the excess of saturated phenomena the receding of horizons and the loss of singularity this impoverished self misrecognizes itself in a manner that begins to resemble the metaphysical ego and in doing so becomes a vector for retransmitting the thanatonic's suffering unto others     **Growing**

Norton Wise, 2004-11-24 This collection addresses a post WWII shift in the hierarchy of scientific explanations where the highest goal moves from reductionism towards some understanding of how elementary objects get built up or grown up into complex objects whose The Chautauquan, 1881 Love-life in Nature Wilhelm Bölsche, 1926

*A critique of Kant, tr. by W.S. Hough* Kuno Fischer, 1888 **Durkheim, Bernard and Epistemology (Routledge Revivals)** Paul Q. Hirst, 2010-11 This title first published in 1975 contains two complimentary studies by Paul Q Hirst the first based on Claude Bernard's theory of scientific knowledge and the second concerning Emile Durkheim's attempt to provide a philosophical foundation for a scientific sociology in *The Rules of Sociological Method* The author's primary concern is to answer the question is Durkheim's theory of knowledge logically consistent and philosophically viable His principal conclusion is that the epistemology developed in the Rules is an impossible one and that its inherent contradictions are proof that sociology as it is commonly understood can never be a scientific discipline
