The Grove Encyclopedia of American Art Joan M. Marter, 2011 Arranged in alphabetical order these 5 volumes encompass the history of the cultural development of America with over 2300 entries **Newton's Physics and the Conceptual Structure of the Scientific Revolution** Z. Bechler, 2012-12-06 Three events which happened all within the same week some ten years ago set me on the track which the book describes The first was a reading of Emile Meyerson works in the course of a prolonged research on Einstein's relativity theory which sent me back to Meyerson's Identity and Reality where I read and reread the striking chapter on Irrationality In my earlier researches into the origins of French Conventionism I came to know similar views all apparently deriving from Emile Boutroux's doctoral thesis of 1874 *De la contingence des lois de la nature* and his notes of the 1892-3 course he taught at the Sorbonne *De l'idée de loi naturelle dans la science et la philosophie contemporaines* But never before was the full effect of the argument so suddenly clear as when I read Meyerson On the same week I read by sheer accident Ernest Moody's two parts paper in the JHI of 1951 Galileo and Avempace Put near Meyerson's thesis what Moody argued was a striking confirmation it was the sheer irrationality of the Platonic tradition leading from Avempace to Galileo which was the working conceptual force behind the notion of a non appearing nature active all the time but always submerged as it is embodied in the concept of void and motion in it
