

A PHILOSOPHER LOOKS AT SCIENCE

A fascinating glimpse into the philosophical problems which arise in connection with science—problems which the scientist necessarily leaves the philosopher to grapple with.

Philosopher Looks At Science:

A Philosopher Looks at Science Nancy Cartwright, 2022-06-30 A fresh provocative and engaging treatment of what science really amounts to in society and of what it can do *A Philosopher Looks at Science* John G. Kemeny, 1964 **A Philosopher Looks at Science** John George Kemeny, 1963 **A Philosopher Looks at Science** Nancy Cartwright, 2022-06-30 What is science and what can it do Nancy Cartwright here takes issue with three common images of science that it amounts to the combination of theory and experiment that all science is basically reducible to physics and that science and the natural world which it pictures are deterministic The author s innovative and thoughtful book draws on examples from the physical life and social sciences alike and focuses on all the products of science not just experiments or theories and how they work together She reveals just what it is that makes science ultimately reliable and how this reliability is nevertheless still compatible with a view of nature as more responsive to human change than we might think Her book is a call for greater intellectual humility by and within scientific institutions It will have strong appeal to anyone who thinks about science and how it is practised in society *A Philosopher Looks at Science* Alfred North Whitehead, **A Philosopher Looks at Science** Jan Gonda, 1959 *A Philosopher Looks at Science* , 1959 *A Philosopher Looks at Jesus* Edward J. Machle, 2008-03-01 This book is the response to a lifetime of questions raised by fellow philosophers by students and by the author s own wrestlings Since the author claims that Jesus s importance goes beyond his being just a moral teacher Edward Machle discusses the difference between the foundations of philosophy and of theology and how the disciplines of philosophy and theology use language differently Then Machle goes on to present his somewhat unorthodox evaluations of the four gospels and their relevance rejecting for instance claims of a Q document and dating Matthew later than Luke Since any account of Jesus must assume that before Jesus appears in the records he had a distinctive development two admittedly fictional narratives follow preparing for distinctive emphases in the author s later discussions of frequently met problems about Jesus s birth miracles aims and death Machle lays unusual emphasis on the centrality of the title Son of Man for Jesus Extensive discussions of the resurrection narratives and questions about them follow leading to a unique treatment of John s Prologue The last three chapters deal with Jesus s relation to modern belief and life **A Philosopher Looks at Human Beings** Michael Ruse, 2021-05-20 Considers why humans consider themselves superior to all other animals and whether they are right to do so **A Philosopher Looks at the Natural World** Daniel C. Fouke, 2021-08-10 This book interweaves the author s personal story and observations of nature with scientific research and philosophical reflection It tells the story of nearly three decades of labor to ecologically restore twenty one acres of ruined land near Dayton Ohio This story and what the author has observed motivate reflection on the human relationship to soil the inner lives of animals the intelligence of plants and human psychology The book advances the case for the intelligence and kinship of all living things an ethic of respect for life and the need to radically rethink how human societies live on Earth **Know Thyself** Thomas O.

Buford, 2011-11-25 *Know Thyself An Essay in Social Personalism* proposes that social Personalism can best provide for self knowledge In the West self knowledge has been sought within the framework of two dominant intellectual traditions order and the emerging self On the one hand ancient and medieval philosophers living in an orderly hierarchical society governed by honor and shame and bolstered by the metaphysics of being and rationalism believed persons gain self knowledge through uniting with the ground of their being once united they would understand what they are what they are to be and what they are to do On the other hand Renaissance and modern thinkers such as Pico della Mirandola Copernicus Descartes Locke and Kant shattered the great achievement of the high middle ages and bequeathed to posterity an emerging self in a splintered world Continuing their search for self knowledge the moderns found themselves faced with the dualism of the emerging self of the Renaissance and the natural world as understood by modern scientists New problems spun out of this dualism including the mind body problem the other minds problem free will and determinism the nature and possibility of social relationships values moral norms and their relationship to the natural and social worlds and the relationships between science and religion Finding self knowledge among these splinters without a guiding orientation has proven difficult Even though luminaries such as Spinoza Berkeley and Hegel attempted to bring order to the sundered elements their attempts proved unsatisfactory We contend that neither order nor the emerging self can adequately provide for self knowledge Since those culturally embodied master narratives lead us to an impasse we turn to social Personalism Self knowledge developed in this book shows how persons in relation to the Personal learn who they are what they are to become and what they must do to achieve that goal It also shows that the achievement of self knowledge is supported by a natural social and cultural environment rooted in trust In this humane and timely discussion Thomas O Buford offers a personalist understanding of self knowledge that avoids the impersonalisms that erode the dignity of persons and their moral life which characterize modern life

The Human Animal Markus Gabriel, 2024-11-13 The climate crisis has forced us to recognize that we are not

separate from nature but are part of the natural world on which we depend human beings are animals and we must understand much better our place in nature and our impact on our environment if we are to avoid our own annihilation as a species And yet we feel nevertheless that we do not entirely fit into nature that we stand apart from other animals in some way in what way exactly Markus Gabriel argues that what distinguishes humans from other animals is that humans are minded living beings who seek to understand the world and themselves and who possess ethical insight into moral contexts Mind is the capacity to lead one's life in the light of a conception of who or what one is The undeniable difference between us and other animals defines the human condition and places a special responsibility on us to consider our actions in the context of other living beings and our shared habitat It also calls on us to cultivate an ethics of not knowing to recognize that however much we may seek to understand the world we will never completely master it Our grasp of reality mediated by our animal minds will always be limited much is and will remain alien to us lending itself only to speculation and to remember

this is to stand us in better stead for carving out an existence among the environmental crisis that looms before us all

Critical Scientific Realism Ilkka Niiniluoto, 1999-12-09 Ilkka Niiniluoto comes to the rescue of scientific realism showing that reports of its death have been greatly exaggerated Philosophical realism holds that the aim of a particular discourse is to make true statements about its subject matter Niiniluoto surveys the different varieties of realism in ontology semantics epistemology theory construction and methodology He then sets out his own original version and defends it against competing theories in the philosophy of science Niiniluoto's critical scientific realism is founded upon the notion of truth as correspondence between language and reality and characterizes scientific progress in terms of increasing truthlikeness This makes it possible not only to take seriously but also to make precise the troublesome idea that scientific theories typically are false but nevertheless close to the truth
