**After Parmenides** Tom Rockmore, 2021-10-07 Engages with one of the oldest philosophical problems the relationship between thought and being and offers a fresh perspective with which to approach the long history of this puzzle In *After Parmenides* Tom Rockmore takes us all the way back to the beginning of Western philosophy when Parmenides asserted that thought and being are the same This idea created a division between what the mind constructs as knowable entities and the idea that there is also a mind independent real which we can know or fail to know Rockmore argues that we need to give up on the idea of knowing the real as it is and instead focus on the objects of cognition that our mind constructs Though we cannot know mind independent objects as they really are we can and do know objects as they appear to us *After Parmenides* charts the continual engagement with these ideas of the real and the knowable throughout philosophical history from Plato and Aristotle to Descartes Kant Fichte Hegel Schopenhauer Marx and others This ambitious book shows how new connections can be made in the history of philosophy when it is reread through a new lens *The Theory of Info-Statics: Conceptual Foundations of Information and Knowledge* Kofi K. Dompere, 2017-07-06 This book discusses the development of a theory of info statics as a sub theory of the general theory of information It describes the factors required to establish a definition of the concept of information that fixes the applicable boundaries of the phenomenon of information its linguistic structure and scientific applications The book establishes the definitional foundations of information and how the concepts of uncertainty data fact evidence and evidential things are sequential derivatives of information as the primary category which is a property of matter and energy The sub definitions are extended to include the concepts of possibility probability expectation anticipation surprise discounting forecasting prediction and the nature of past present future information structures It shows that the factors required to define the concept of information are those that allow differences and similarities to be established among universal objects over the ontological and epistemological spaces in terms of varieties and identities These factors are characteristic and signal dispositions on the basis of which general definitional foundations are developed to construct the general information definition GID The book then demonstrates that this definition is applicable to all types of information over the ontological and epistemological spaces It also defines the concepts of uncertainty data fact evidence and knowledge based on the GID Lastly it uses set theoretic analytics to enhance the definitional foundations and shows the value of the theory of info statics to establish varieties and categorial varieties at every point of time and thus initializes the construct of the theory of info dynamics [Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs](#) Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart s work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response

to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell s Collected Papers

*Theory of Philosophical Consciencism* Dompere, Kofi Kissi,2017-09-24 In the Theory of Philosophical Consciencism Professor Dompere establishes how Nkrumah used the theory of categorical conversion housing the necessary conditions of transformation to design strategies for creating the sufficient conditions for socio political transformations The theory of Philosophical Consciencism is about the institutionally destruction creation process for socio political transformation The theory shows the scientific contributions of Nkrumah s thinking to the solution of the transformation problem in science and its application to social systemicity where Nkrumah s analytical weapons were drawn from African conceptual system The theory is developed as logico mathematical foundations that guide the internal management of the command control decision choice systems for creative destruction of socio political varieties in transformations through the development of qualitative mathematics making possible the construct of qualitative equations

of motion for connecting varieties in qualitative transfers The qualitative equations of motion through the Philosophical Consciencism constitute the sufficient conditions for transformations The theory links rationality intentionality experiential information structure defective deceptive information structures in the control dynamic games of power and dominance by the duals and poles under the principle of opposites with relational continua and unity relative to decision choice systems that induce negation negation transformations where paths are established by the history of success failure outcomes in the socially control dynamic zero sum games between the duals in any duality and between the poles of any actual potential polarity The main premise of the monograph is that there exists a set of sufficient conditions in support of the necessary conditions for internal transformation of socio natural varieties The theory is useful in understanding developmental processes and multi polar power zero sum games for global dominance The necessary conditions constitute the natural necessity that constrains cognitive freedom The sufficient conditions constitute cognitive freedom that must overcome the necessity in socio natural systems dynamics Had this conceptual system been familiar to African leaders the African transformation from colonialism to complete emancipation rather than neocolonialism would have been increasingly successful This holds for those seeking triumph over injustices oppression imperialism and social change in all systems

**The Early Years of Mind** Lukas M. Verburgt,2025 Ever since its establishment Mind has been one of the world s leading philosophy journals This is the first work to study its origins development and influence in the first few decades of its existence Founded in 1876 by Alexander Bain it soon became an organ for some of the best new work in English language philosophy and psychology with contributions from once important but today forgotten thinkers e g Edmund Montgomery E E Constance Jones as well as emergent now famous figures e g William James Bertrand Russell Bringing together a diverse team of scholars the volume shows how at a time when the scientific status of and relation between philosophy and psychology was not yet settled Mind

helped define these fields in a way we still recognize them today As such *The Early Years of Mind* is essential reading for anyone interested in a neglected yet crucial period of the history of philosophy

**Essays on Gödel's Reception of Leibniz, Husserl, and Brouwer** Mark van Atten, 2014-11-21 This volume tackles Gödel's two stage project of first using Husserl's transcendental phenomenology to reconstruct and develop Leibniz monadology and then founding classical mathematics on the metaphysics thus obtained The author analyses the historical and systematic aspects of that project and then evaluates it with an emphasis on the second stage The book is organised around Gödel's use of Leibniz Husserl and Brouwer Far from considering past philosophers irrelevant to actual systematic concerns Gödel embraced the use of historical authors to frame his own philosophical perspective The philosophies of Leibniz and Husserl define his project while Brouwer's intuitionism is its principal foil the close affinities between phenomenology and intuitionism set the bar for Gödel's attempt to go far beyond intuitionism The four central essays are *Monads and sets* *On the philosophical development of Kurt Gödel and intuitionism* and *Construction and constitution in mathematics* The first analyses and criticises Gödel's attempt to justify by an argument from analogy with the monadology the reflection principle in set theory It also provides further support for Gödel's idea that the monadology needs to be reconstructed phenomenologically by showing that the unsupplemented monadology is not able to found mathematics directly The second studies Gödel's reading of Husserl its relation to Leibniz monadology and its influence on his published writings The third discusses how on various occasions Brouwer's intuitionism actually inspired Gödel's work in particular the *Dialectica* Interpretation The fourth addresses the question whether classical mathematics admits of the phenomenological foundation that Gödel envisaged and concludes that it does not The remaining essays provide further context The essays collected here were written and published over the last decade Notes have been added to record further thoughts changes of mind connections between the essays and updates of references

**The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics** Kofi K. Dompere, 2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility

space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space The rational foundations are enhanced with categorial analytics The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space

*Einstein and the Generations of Science* David Abshire, 2017-09-29 This absorbing intellectual history vividly recreates the unique social political and philosophical milieu in which the extraordinary promise of Einstein and scientific contemporaries took root and flourished into greatness Feuer shows us that no scientific breakthrough really happens by chance it takes a certain intellectual climate a decisive tension within the very fabric of society to spur one man's potential genius into world shaking achievement Feuer portrays such men of high imaginative powers as Einstein Bohr Heisenberg de Broglie influenced by and influencing the social worlds in which they lived

*New Directions in the Philosophy of Mathematics* Thomas Tymoczko, 1998-02 The traditional debate among philosophers of mathematics is whether there is an external mathematical reality something out there to be discovered or whether mathematics is the product of the human mind This provocative book now available in a revised and expanded paperback edition goes beyond foundationalist questions to offer what has been called a postmodern assessment of the philosophy of mathematics one that addresses issues of theoretical importance in terms of mathematical experience By bringing together essays of leading philosophers mathematicians logicians and computer scientists Thomas Tymoczko reveals an evolving effort to account for the nature of mathematics in relation to other human activities These accounts include such topics as the history of mathematics as a field of study predictions about how computers will influence the future organization of mathematics and what processes a proof undergoes before it reaches

publishable form This expanded edition now contains essays by Penelope Maddy Michael D Resnik and William P Thurston that address the nature of mathematical proofs The editor has provided a new afterword and a supplemental bibliography of recent work

**Games: Unifying Logic, Language, and Philosophy** Ondrej Majer, Ahti-Veikko Pietarinen, Tero Tulenheimo, 2009-01-16 Ondrej Majer Ahti Veikko Pietarinen and Tero Tulenheimo

1 Games and logic in philosophy Recent years have witnessed a growing interest in the unifying methodologies over what have been perceived as pretty disparate logical systems or else merely an assortment of formal and mathematical approaches to philosophical inquiry This development has largely been fueled by an increasing dissatisfaction to what has earlier been taken to be a straightforward outcome of logical pluralism or methodological diversity These phrases appear to reflect the everyday chaos of our academic pursuits rather than any genuine attempt to clarify the general principles underlying the miscellaneous ways in which logic appears to us But the situation is changing Unity among plurality is emerging in contemporary studies in logical philosophy and neighbouring disciplines This is a necessary follow up to the intensive research into the intricacies of logical systems and methodologies performed over the recent years The present book suggests one such peculiar but very unrestrained methodological perspective over the field of logic and its applications in mathematics language or computation games An allegory for opposition cooperation and coordination games are also concrete objects of formal study

Physics at Seventeenth and Eighteenth-Century Leiden: Philosophy and the New Science in the University Edward Grant Ruestow, 1973-07-31

2 result of the attitudes characteristic of the small group of permanent residents at the schools the academic scholars This conservatism however was not everywhere equally efficacious In the sixteenth century the universities of northern Italy Padua above all had nurtured an intellectual ferment of considerable significance to the rise of the new science and they continued to be penetrated by the influence of that science throughout the seventeenth century The University of Oxford momentarily played host to leading members of the English scientific community during the Commonwealth period and Cambridge was shortly to boast the genius of Isaac Newton Indeed a small number of the one hundred odd universities in Europe strove more or less purposefully to come to grips with the new science and to in at least within the body of learning for which they corporate facets of it

2 held themselves responsible Among the most notable of these more progressive schools must be included the University of Leiden recently founded by the Lowlanders in revolt against the King of Spain Philip II The doors of the University of Leiden had first opened to be sure in the midst of rebellion and had been forced open as it were by rumors of peace In 1572 the revolt with the Calvinists now clearly in the van acquired what was to prove an enduring foothold in the maritime provinces of Holland and Zeeland
