Nattermann, Vladimir K Dobrev, 1995-08-31 In recent years nonlinear and irreversible quantum mechanics is becoming increasingly important because of the availability of precision experiments There are new and successful attempts to understand quantum irreversibility The development of generalized symmetries has to led to new families of evolution equations for pure and mixed states On the one hand this timely symposium covers nonlinear and irreversible quantum mechanics the theory of quantization methods causality and various problems important in this context On the other hand it reports the development of quantum group symmetries and of methods to construct deformed quantum mechanical evolution equations like the q deformed Schrödinger equations **Cartanian Geometry, Nonlinear Waves, and Control Theory**

Lanngren, 2012-12-02 Solitons in Action is a collection of papers that discusses the concept of a wave packet or pulse known

as a soliton One paper reviews the development of the solitary wave concept with emphasis on the difference between a

solitary wave and a soliton The Korteweg de Vries KdV equation shows the interactions between infinite sets of conservation

laws and the inverse scattering transform method The Backlund transform technique produces hierarchies of multisoliton

solutions for nonlinear wave equations The Gel'fand Levitan algorithm can effect an inverse scattering calculation that

relates changes in the scattering data to changes in the solution of corresponding wave equation One paper points out that

concepts in differential geometry can show the fundamental nature of soliton behavior and the relationship between inverse scattering and the Backlund transformation Solitons in action can be viewed as magnetic flux propagates through a gap between two closely spaced superconductors in quantum units This view results in a simplified procedure for perturbation expansions around multisoliton solutions This collection can prove useful for researchers involved in the study of fluid mechanics of pure and applied sciences of mathematical sciences and of wave theory **Interdisciplinary Mathematics:**
