Radiation Carcinogenesis And Dna Alterations:

Radiation Carcinogenesis and DNA Alterations Frederic J. Burns, 2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt's lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells Radiation Carcinogenesis and DNA Alterations Frederic J

Burns, 1987-05-01 Induced Effects Of Genotoxic Agents In Eukaryotic Cells Toby G Rossman, 1992-09-21 This book provides an understanding of the consequences of induced proteins in the toxicological response of cells to chemical and radiation damage to DNA and will be helpful in creating proper mathematical models for extrapolation to low doses and assessing human exposure or cellular injury Handbook of Radiobiology Kedar N. Prasad, 2020-08-18 This handbook presents the most current information on the effects of ionizing radiation on mammalian cells with emphasis on human tissues The dose effect relationship is emphasized in a quantitative manner The book contains up to date data on the late effects of low levels of radiation on humans It also provides some of the late consequences of radiation therapy detected among cancer survivors Protease Inhibitors as Cancer Chemopreventive Agents A.R. Kennedy, W. Troll, 2012-12-06

Protease inhibitors PIs are widely distributed in plants and animals and have a variety of functions which include preventing digestion of seeds by insects and modifying blood clotting in animals After it was noted that synthetic and natural inhibitors suppress two stage carcinogenesis and breast cancer extensive work investigating PIs as chemopreventive agents was started PIs are unique in that they interfere with cancer development in a variety of ways including suppression of oxygen radicals oncogenes and metastases Epidemiologic evidence supports their prevention of major human cancers in populations that consume foods containing them Their supervised use in humans is on the threshold of development The epidemiologic discovery of the importance of lentils and other seeds rich in PIs in preventing many human cancers allowed us to look at the

action of PIs as chemopreventive agents as reviewed in Chapter I Fontham and Correa Chapter 2 Kennedy discusses the role of natural PIs e g the Bowman Birk inhibitor as anticarcinogens and the possible limitations of their use In Chapter 3 Kennedy the transformation of C3HI IOTlh cells caused by carcinogens and promoters is shown to be suppressed by PIs Bowman Chapter 4 relates the discovery of inhibitors in soybeans that are distinct from the Kunitz inhibitor and the occurrence of a similar inhibitor in peanuts and other legumes Chapter 5 Birk is an overview of PIs of plant origin and their role in human nutrition

Molecules, Cells And Man - Proceedings Of The 4th International Conference On Mathematical Population Dynamics O Arino,David E Axelrod,Marek Kimmel,1997-12-04 This book presents a new approach to the subject of cosmology It fully exploits Einstein s theory of general relativity It is found that the most general formal expression of the theory replaces the 10 component tensor formalism with a 16 component quaternion formalism This leads to a unified field theory where one field incorporates gravitation and electromagnetism The theory predicts an oscillating universe cosmology with a spiral configuration Dark matter is explained in terms of a sea of particle antiparticle pairs each in a particular derived ground state This leads to an explanation for the separation between matter and antimatter in the universe There is a brief discussion of black holes and pulsars The final chapter delves into philosophical considerations such as the different types of truth positivism versus realism and a discussion of the role of the Mach principle in physics and cosmology a *Selective Activation of Drugs by Redox Processes* G.E. anticarcinogens I. Glenn Sipes,1997 This volume in the Comprehensive Toxicology series demonstrates how the use of extremely powerful molecular and cell biology techniques has stimulated the growth of toxicology as a scientific discipline The field of toxicology has evolved from its earlier days of in vivo and descriptive studies to focusing on mechanisms Frequently mechanisms require an examination at the cellular and molecular level Molecular toxicology has opened the door to comprehending the basic mechanisms of how toxicants show their effects The volume is a comprehensive integrated profile of the molecular effects of toxicants and the molecular mechanisms involved in producing cellular and tissue injury

Views and Suppositions about the Pathogenesis of Cancer Georgi Gogichadze,2016 Primary target for carcinogens are determinants of cellular membranes but not cell s DNA On the first stage of carcinogenesis initiation two normal somatic cells of one organ or tissue may create dikaryons but in some cases nonviable polykaryocytes During the perforation of cellular membranes induced by different carcinogenic agents and factors the total negative charge of plasma membranes decrease and the cells acquire the capability of closely approaching adhesion which frequently especially upon coincidence of

the perforated parts may serve as a prerequisite to fusion process After synchronous mitosis or simple mechanical assembly of hetero or homokaryons nuclei mononuclear hybrid precancerous cells develop with a tetraploid set of chromosomes on initial stage of hybridization In addition to the data evidencing the hybrid origin of a cancer cell this work attempts to answer some important and still unanswered questions of modern oncology

Molecular Biomarkers for Cancer Diagnosis and Therapy Ranbir Chander Sobti, Haruhiko Sugimura, Aastha Sobti, 2024-06-29 This book presents recent advancements challenges and clinical implications of molecular biomarkers in various cancers This book highlights the clinical applications of biomarkers are extensive for cancer risk assessment screening and early detection of cancer accurate diagnosis patient prognosis prediction of response to therapy and cancer surveillance and monitoring response It also explores the progress of predictive biomarkers as an adjunctive tool to tumor immunotherapy in effectively identifying the efficacy of immune checkpoint inhibitors and discusses their future directions in achieving precision immuno oncology Further the book examines the combination of next generation sequencing and advanced computational data analysis approaches in the understanding of the genomic underpinnings of cancer development and progression Towards the end the chapter discusses the role of some commonly investigated phytochemicals and their epigenetic targets that are of particular interest in cancer prevention and cancer therapy It is a must for researchers as well as advanced students and physicians in the field of cancer and clinical oncologists
