Atomic and Nuclear Clusters G.S. Anagnostatos, W.v. Oertzen, 2012-12-06 The Second International Conference on Atomic and Nuclear Clusters 93 was organized in a joint effort by the Demokritos National Center for Scientific Research G S Anagnostatos representing the atomic physics and the Hahn Meitner Institut W von Oertzen representing the nuclear physics The subject of clusters small aggregates of particles is a topic of primary interest in both atomic and nuclear physics and also in other fields like in the case of quark structure of baryons and in cosmology The interplay between atomic and nuclear physics is a particularly fascinating one because many concepts are common to both fields quantal effects shells geometric structures collective modes fission etc This conference was the second after the first one organized by Professor M Brenner in Abo Finland in 1991 The general atmosphere of a joint forum for atomic and nuclear physicists was very fruitful and thus the decision to have a sequence of such meetings has been taken A third one is planned in St Petersburg Russia with Professor K Gridnev St Petersburg and Mme Professor C Bnkhignac Orsay as Chairpersons The conference site Fin on Santorini island Greece was a wonderful choice for a conference It is small which

helps to keep people concentrated in a smaller community it has a perfect convention center the P Nomikos Conference Center and a very beautiful landscape formed by a large volcanic crater Proceedings of the First International Workshop on Physics of Unstable Nuclear Beams International Workshop on Physics of Unstable Nuclear Beams 1996, Serra Negra, Brazil, Carlos A. Bertulani, 1997 In this volume the structure and reactions of radioactive nuclei are described The relevance of halo nuclei to nuclear astrophysics is stressed in different contributions Other topics included are three body aspects of light neutron rich nuclei elastic scattering charge exchange and Coulomb excitation fragment moment distribution mass at half life measurement and electromagnetism induced fission Experimental Techniques in Nuclear Physics Dorin N. Nuclei in the Cosmos F Kappeler, K Wisshak, 2020-11-25 Nuclei in the Cosmos a volume of conference papers gathers together astronomers astrophysicists and nuclear physicists for a thorough discussion of nucleosynthesis its role in the evolution of the universe and its intriguing possibilities as a diagnostic tool for stellar interiors Nineteen invited papers provide a solid review of nucleosynthesis topics and approximately another 70 papers bring you up to date on the forefront of research in this quickly developing area Probing The Nuclear Paradigm With Heavy Ion Reactions - Proceedings Of The International School Of Heavy Ion Physics Ricardo Americo Broglia, P Kienle, P F Bortignon, 1995-02-22 Major developments have taken place during the last few years in the study of the nuclear paradigm as a result of recent detector and accelerator developments and of improved theoretical models The active use of 4 detectors to measure the gamma decay of excited nuclei has been instrumental in exploring the consequences of extremely high rotational frequencies and excitation energies in the nuclear structure The identification of superdeformed bands of limiting temperature for the detection of giant resonances and of rotational damping are conspicuous examples of this novel type of research Studies of the disassembling of the nucleus have been systematically carried out and the results interpreted in terms of transport models At even higher temperatures one expects to have a completely new regime of hot dense matter where the hadronic properties become strongly renormalized by the medium Furthermore studies of the properties of the nucleon as a many body system of quarks and gluons displaying collective degrees of freedom which are damped by couplings to more complicated states are providing a detailed and consistent picture of the nuclear paradigm Important progress is also taking place in situations essentially opposite to the scenarios described above namely in the study of correlations in nuclear matter at very low temperature and density New Frontiers In Nuclear Physics - Lecture Notes Of Jsps-ins International Spring School S Homma, M Wada, Yoshinori Akaishi, 1994-06-09 **International Workshop on the Physics and Techniques of Secondary Nuclear Beams** J. F. Bruandet, Bernard Fernandez, Monique Bex, 1992 **Variations On Nuclear Themes: A Symposium Held In Honor Of Stanley S Hanna** Calvin M Class, L Cohen, 1994-09-19 Papers delivered during this Symposium are augmented by invited contributions covering a wide range of subjects both experimental and theoretical Topics include low and medium

energy nuclear physics nucleon structure and reaction theory nuclear models polarization studies electromagnetic moments applications in astrophysics atomic surface and condensed matter physics

Heavy Ion Physics: Proceedings Of The VI International School-seminar Rumiana Kalpakchieva, Yu Ts Oganessian, 1998-08-22 This book presents recent results on experimental and theoretical studies of the interaction of heavy ions with nuclei at low and intermediate energies the dynamics of fusion and decay of complex nuclear systems the synthesis of superheavy elements the synthesis and properties of exotic nuclei close to the proton and neutron driplines nuclear fission nuclear structure and reactions with stable and radioactive ion beams It also covers some aspects of applied physics research track membranes and their applications the use of polymers in medicine and electronics production and application of radioisotopes for medical purposes and environmental protection
