Radioactivity in Consumer Products A. Alan Moghissi, 1978      *Radioactivity in Consumer Products* United States Nuclear Regulatory Commiss, 2004-10-01 CONTENTS Preface Introduction Muriel Mitchell Smith Regulations and Standards General and Biological Risks Radioluminous Materials Mining Agricultural and Construction Materials Containing Radioactivity Products Containing Radioactive Sources Miscellaneous Products Panel Discussion      *Radiation Exposure of the U.S. Population from Consumer Products and Miscellaneous Sources* National Council on Radiation Protection and Measurements, 1987      *Radioactivity in the Environment* Vlado Valkovic, 2019-04-17 Radioactivity in the Environment Second Edition presents the facts on the presence of both natural and manmade radionuclides in the environment Sources of ionizing radiation that can lead to human exposure are discussed including natural sources nuclear explosions nuclear power generation the use of radiation in medical industrial and research purposes and radiation emitting consumer products In this thoroughly updated edition users will find new sections on developments in radioactive nuclides in nature and technologically modified exposure to natural radiation new threats by terrorist individuals groups and countries changes to the status of nuclear power in the world and more Additional new sections cover radioisotopes in geo prospecting and the oil industry the use of radiation in environmental protection detector types and detectors used for personal dosimetry the Dirty Bomb the Fukushima accident and North Korea testing sites and nuclear capabilities Includes details of analytical laboratory procedures for radioactivity measurement in different samples Features a new chapter on decontamination after radiation exposure Expands the discussion on nuclear fusion to cover ITER and other installations      **Isotopes and Radiation Technology** , 1967      Environmental Assessment of Consumer Products Containing Radioactive Material D. W. Buckley, 1980      **Environmental Radioactivity from Natural, Industrial and Military Sources** Merrill Eisenbud, Thomas F. Gesell, 1997-03-26 Environmental Radioactivity from Natural Industrial and Military Sources is the comprehensive source of information on radiation in the environment and human exposure to radioactivity This Fourth Edition isa complete revision and extension of the classic work reflecting major new developments and concerns as the Cold War ended nuclear weapons began to be dismantled and cleanup of the nuclear weapons facilities assumed center stage Contamination from accidents involving weapons reactors and radionuclide sources are discussed in an updated chapter including the latest information about the effects of the Chernobyl accident Important revisions are also made to the chapters on natural radioactivity nuclear fuels and power reactors radioactive waste management and various other sources of exposure Several chapters provide primers for readers who may not be familiar with the fundamentals of radiation biology protection standards and pathways for the environmental transport of radionuclides An Appendix lists the properties of the more important radionuclides found in the environment The book concludes with a commentary on contemporary social aspects of radiation exposure and risks that offers analternative view to current often excessive concerns over radiation

nuclear technology and waste Describes every important source of environmental radioactivity Reviews the vexing problems of radioactive waste management and clean up of contaminated sites Contains measured or projected radiation dose estimates for the major sources Features 126 figures 80 tables and more than 1200 references Discusses current problems in historical context The two authors bring more than 75 years of combined experience with environmental radioactivity Provides an understanding of the sources of environmental radioactivity and human exposure from the mining of ores to final disposal of wastes Thoroughly reviews important contamination accidents

Sample Handling and Trace Analysis of Pollutants Damia Barcelo,2000-03-08 This book is an updated completely revised version of a previous volume in this series entitled ENVIRONMENTAL ANALYSIS Techniques applications and quality assurance The book treats different aspects of environmental analysis such as sample handling and analytical techniques the applications to trace analysis of pollutants mainly organic compounds and quality assurance aspects including the use of certified reference materials for the quality control of the whole analytical process New analytical techniques are presented that have been developed significantly over the last 6 years like solid phase microextraction microwave assisted extraction liquid chromatography mass spectrometric methods immunoassays and biosensors The book is divided into four sections The first describes field sampling techniques and sample preparation in environmental matrices water soil sediment and biota The second section covers the application areas which are either based on techniques like the use of gas chromatography atomic emission detection immunoassays or coupled column liquid chromatography or on specific application areas like chlorinated compounds pesticides phenols mycotoxins phytotoxins radionuclides industrial effluents and wastes including mine waste Validation and quality assurance are described in the third section together with the interpretation of environmental data using advanced chemometric techniques The final section reports the use of somewhat advanced analytical methods usually more expensive less routinely used or less developed for the determination of pollutants

**Man-Made and Natural Radioactivity in Environmental Pollution and Radiochronology** Richard Tykva,Dieter Berg,2013-03-14 Radioactivity can be detected at different levels in almost all objects all over the world including the human body This omnipresence of naturally occurring

radioactivity is of immediate and crucial concern to people who work in the nuclear industry to state and local authorities responsible for environmental protection and control of nuclear weapons and to researchers as physics e g interaction in scientific and technological disciplines such of radiation with matter chemistry e g management of radioactive wastes biology Ce g radiation bioeffects and risks ecology e g remediation of environmental pollution electronics e g measurement instruments etc Unlike other environmental pollutants such as heavy metals and pesticides some other scientific disciplines for example archaeology hydrology and geology profit by the environmental radionuclides using methods based on their application in radiochronology The basic goal of this book is to examine the complex state of radioactivity in the environment including its sources and applications In principle there are two sources of environmental radioactivity namely man made and natural The authors of this book set out to analyze mainly empiric al aspects of the activities of both groups On one hand a detailed analysis of the sources releasing radionuclides into the environment by human activities should while describing environmental pollution and its dangers contribute to its decrease in the future
