Constine, Lawrence B. Marks, Paul Okunieff, 2007-12-27 The rapid advances in radiation oncology radiation biology and radiation therapy physics have led to an accumulation of information on the interactions of radiation with other therapeutic modalities such as the wide array of chemotherapeutic agents being employed in combination with radiation therapy as well as the multiple biologic response modifiers that are being used in combination with radiation therapy It is now recognized that they have a significant impact on normal tissue toxicities The radiation doses customarily deemed safe on the basis of past experience have now when combined with other modalities led to severe late effects in different vital organs The previously defined radiation tolerance dosages remain as valuable guides but their applicability has changed significantly The emphasis is now placed on the volume of the organ irradiated as well as the dose being used New constructs relating global whole organ and focal partial volume injury as a function of the dose volume histogram emerge as a significant predictor of late effects on normal tissues There are now mathematical models such as the model on standard dose time dose factors and accumulated radiation effects that have been supplanted by linear quadratic equations using the alpha beta ratio and its clinical applicability to normal tissue complications This volume presents contemporary data relating to late effects on normal tissues      *Essential Medical Physiology* Leonard R. Johnson, 2003-09-18 Textbook covering the principal subjects in a modern medical school physiology course      **Benumof's Airway Management** Carin A. Hagberg, 2007-02-23 Airway Management is one of the fundamental fields of knowledge that every resident anesthesiologist and Nurse Anesthetist must master to successfully manage surgical patients The new edition of this highly successful text has a new editor and increased coverage of pre and post intubation techniques Fully illustrated and tightly focused this unique text is the only volume of its kind completely dedicated to airway management Complete with the latest ASA guidelines no other volume does what Benumof's Airway Management does This is the definitive reference on airway management and it belongs on your shelf Offers a how to approach to airway management Includes case examples and analysis Highly illustrated format provides clarity on complex procedures A new editor and 50% new contributors bring you the latest research and practice guidelines Over two hundred new illustrations highlight complex procedures and monitoring techniques with greater clarity The latest ASA Guidelines make you aware of

exactly what procedures are required in difficult cases Increased complete coverage of pre and post intubation techniques takes you from equipment selection through management of complications      **Egan's Fundamentals of Respiratory Care - E-Book** Robert M. Kacmarek, James K. Stoller, Albert J. Heuer, 2012-04-19 Updated content aligned with the 2009 NBRC CRT Summary Content Outline ensures the text is both current and clinically accurate Expanded use of the NBRC Exam Matrix Correlation Chart throughout all Evolve online resources makes test preparation easier      **The Respiratory Tract in Pediatric Critical Illness and Injury** Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-18 The principal role of the respiratory system is to permit efficient exchange of respiratory gases O<sub>2</sub> and CO<sub>2</sub> with the environment The respiratory system is unique in that it is constantly exposed to a barrage of foreign substances from both the internal environment at any one point in time approximately one half of the cardiac output is received by the lungs and the external environment with each breath the respiratory tract is exposed to pollens viruses bacteria smoke etc According to the Centers for Disease Control and Prevention diseases of the respiratory system were the seventh and eighth leading causes of deaths in children aged 1 to 19 years in 2003 1 Dr George A Gregory one of the founding fathers of pediatric critical care medicine once estimated that acute respiratory failure accounts for nearly 50% of all admissions to the pediatric intensive care unit PICU 2 Just as important are the many diseases that affect the respiratory system that are not associated with acute respiratory failure but nevertheless constitute a major portion of the practice of pediatric critical care medicine some of which account for significant morbidity and mortality 3 Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe Derek S Wheeler Hector R Wong Thomas P      **The Respiratory System** Andrew Davies, Carl Moores, 2014-02-03 This is an integrated textbook on the respiratory system covering the anatomy physiology and biochemistry of the system all presented in a clinically relevant context appropriate for the first two years of the medical student course One of the seven volumes in the Systems of the Body series Concise text covers the core anatomy physiology and biochemistry in an integrated manner as required by system and problem based medical courses The basic science is presented in the clinical context in a way appropriate for the early part of the medical course There is a linked website providing self assessment material ideal for examination preparation
