Regions of Recent Star Formation R.S. Bohn,P.E. Dewdney,2012-12-06 The symposium on Neutral Clouds near HII Regions was prompted by an obvious need to bring together workers specifically interested in the dynamical and photochemical effects in regions showing clear evidence of on going star formation This is currently an area of considerable research activity with much new observational material over the wavelength range from X ray to radio Furthermore the field is beginning to mature No longer is molecular spectroscopy concerned only with the search for new lines and with preliminary surveys No longer are evolving HII regions modelled with the naive assumption of constant density Similarly ideas of successive star formation champagne and blister models of HII regions and refinements to abundance calculations are examples which show that theoretical initiative is keeping pace We were both surprised and gratified by the number of contributed papers and the extent to which they addressed the subject matter In the proceedings we have grouped these papers near the most appropriate of the four invited review papers The subjects of these reviews are in the general areas of Evolution of HII Regions Dynamical Interactions Chemistry in Active Regions and Infrared and Maser Sources The symposium comprised 42 orally presented papers and 23 poster papers All but two are reproduced in this volume Rural Inequality in Divided Russia Stephen Wegren,2013-07-24 This book examines economic and political polarisation in post

Soviet Russia and in particular analyses the development of rural inequality It discusses how rural inequality has developed in post Soviet Russia and how it differs from the Soviet period and goes on to look at the factors that affect rural stratification and inequality using human and social capital profession gender and village location as independent variables The book uses survey data from rural households and fieldwork in Russia in order to highlight the multiplicity of divisions that act as fault lines in contemporary rural Russia

Advances in Cognitive Neuroscience of Numerical and Mathematical Processing Filip Van Opstal,Seppe Santens,Daniel

Ansari,2012-09-12 In this special issue the most recent advances in the domain of numerical cognition will be presented During the last decades our understanding of how numbers are processed increased dramatically with the arrival of different imaging techniques and neurophysiological experiments in humans and monkeys We are now starting to build up a clearer picture of how numbers are represented in the brain how this representation develops in the course of a lifetime how numbers are embedded in other cognitive features like attention spatial memory etc and how this eventually leads to our capability to perform complex mathematics Ultimately this accumulation of knowledge might provide us with an understanding of why numbers are problematic for some people This special issue deals with all aspects of numerical cognition findings on the basic neural responses to magnitudes the link between numbers space time attention action etc mathematical processing numerical development in healthy and clinical populations This special issue solicits contributions from the field of neurobiology neuropsychology and behavioral and computational neuroscience that will increase our understanding of the neural mechanisms underlying numerical cognition **Diarrhoeal Diseases Research** ,1991-09

Schmadel,Gert Zech,2013-04-18 Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions
