Regulation Of Aldosterone Biosynthesis:

Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Most of our knowledge of the physiological control of aldosterone secretion is based on animal experiments and clinical studies which were carried out in the 1950s and early 1960s by a large number of inspired ingenious and meticulous researchers Their work has been excellently reviewed by among others MULLER 1963 BLAIR WEST et al 1963 LARAGH and KELLY 1964 GANONG et al 1966 MULROW 1966 DAVIS 1967 and GROSS 1967 According to the majority of these investigators aldosterone secretion is primarily regulated by the renin angiotensin system with plasma sodium and potassium levels and pituitary secretion of ACTH playing important secondary roles During the last six years this hypothesis has been generally accepted and has only occasionally been challenged The following is an attempt to take from the perspective of a relatively simple in vitro model a new look at the efferent axis of the apparently very complex control system maintaining adequate aldosterone production in the mammalian organism My views are based mainly on a series of experiments which I have performed in order to study more closely the interactions of adrenocortical tissue with substances capable of directly influencing aldosterone biosynthesis Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Sixteen years is a long time not only in human life but also in the rapid history of contemporary endocrinology Since the publication of the first edition of this monograph numerous new lines of research and discoveries have greatly contributed to our knowledge of the physiological and pathological regulation of aldosterone biosynthesis in man and animals The first reports about a sensitive radioimmunoassay for plasma aldosterone and about a preparation of dispersed zona glomerulosa cells were published in 1970 Mayes et al 1970 Haning et al 1970 These two developments alone turned out to have a tremendous impact on research in aldosterone physiology for reviews see Coghlan et al 1979b J F Tait et al 1980b In 1971 atrial natriuretic peptides somatostatin and the precursor molecule of ACTH had not yet been discovered Angiotensin antagonists and converting enzyme inhibitors were not yet available The clinical syndrome of hyporeninemic hypoaldosteronism was unknown The possible roles of prostaglandins and dopamine in the control of aldosterone production had not been considered Cyclic AMP was then the only substance with a clearly established second messenger function **Regulation of Aldosterone Biosynthesis** Dr Jurgen Muller, 1987-11-27 **Hydro Saline Metabolism** Massimiliano Caprio, Fabio Luiz Fernandes-Rosa, 2023-10-12 This book provides an overview of endocrine diseases associated with alterations of salt metabolism with a focus on clinical and pathophysiological aspects It covers various topics in the endocrine control of salt and water homeostasis such as neuroendocrine determinants of water balance adrenal hormone biosynthesis hormonal function in target renal cells and dysfunction of hormonal target effectors in the kidney It also features an update on the clinical management of these diseases including new diagnostic and therapeutic tools Written by a combination of recognized and emerging experts in the field this book is intended as a major reference work not only for endocrinologists and nephrologists but also for pediatricians neonatologists cardiologists and emergency

Biochemistry R. Hobkirk, 2018-01-17 An attempt has been made to attract contributions which illustrate the importance of certain enzymatic processes involved in steroid biosynthesis and metabolism and in some cases leading to steroidal action in target sites Investigators actively engaged in research in such areas were invited to present their material in a manner which they considered fitting It is hoped that as a result of this the publication will possess sufficient depth to warrant approval The blend of review material and experimental data originating in the author laboratories will it is felt make for useful reading

Circulating Regulatory Factors and Neuroendocrine Function Daniela Jezová, John C. Porter, 2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents on the brain met at a satellite symposium of the XXXI International Congress of Physiological Sciences This symposium entitled *Circulating Regulatory Factors and Neuroendocrine Function* was held in Smolenice Castle Czechoslovakia June 26 July 1 1989 and reviews delivered at this symposium as invited presentations are published in this volume Presentations given as free communications have been published separately and are available in *Endocrinologia Experimentalis* 24 1 273 1990

Primary Aldosteronism Per Hellman, 2014-03-28 Primary Aldosteronism PA is a disease caused by the overproduction of aldosterone hormone from the adrenal glands PA causes hypertension and the majority with this disease are undiagnosed for PA There are new insights into this matter by using biochemistry as well as advanced radiology In 2011 a breakthrough in the genetic derangements came identifying a mutated potassium channel gene KCNJ5 in about 40% of PA with adenoma Chapters in this book include a history of the disorder epidemiology genetics derangements the KCNJ5 mutations and phenotype and more

Angiotensin Vol. II Thomas Unger, Bernward A. Schölkens, 2012-02-02 Nearly thirty years ago in 1974 the volume on Angiotensin edited by Irvine H Page and F Merlin Bumpus expanded the Handbook of Experimental Pharmacology Even after two decades the multiplicity of its actions appears not to have been fully discovered To call attention to its many functions is one of the purposes of this book This new edition of the volume on Angiotensin attempts to provide an updated account of the knowledge and findings accumulated since the complexity of angiotensin was so accurately recognized

ACTH Action in the Adrenal Cortex: From

Molecular Biology to Pathophysiology Nicole Gallo-Payet,Antoine Martinez,André Lacroix,2017-07-27 By stimulating adrenal gland and corticosteroid synthesis the adrenocorticotrophic hormone ACTH plays a central role in response to stress In this Research Topic a particular attention has been given to the recent developments on adrenocortical zonation the growth promoting activities of ACTH the various steps involved in acute and chronic regulation of steroid secretion by ACTH including the effect of ACTH on circadian rhythms of glucocorticoid secretion The Research Topic also reviews progress and

challenges surrounding the properties of ACTH binding to the MC2 receptor MC2R including the importance of melanocortin 2 receptor accessory protein MRAP in MC2R expression and function the various intracellular signaling cascades which involve not only protein kinase A the key mediator of ACTH action but also phosphatases phosphodiesterases ion channels and the cytoskeleton The importance of the proteins involved in the cell detoxification is also considered in particular the effect that ACTH has on protection against reactive oxygen species generated during steroidogenesis The impact of the cellular microenvironment including local production of ACTH is discussed both as an important factor in the maintenance of homeostasis but also in pathological situations such as severe inflammation Finally the Research Topic reviews the role that the pituitary adrenal axis may have in the development of metabolic disorders In addition to mutations or alterations of expression of genes encoding components of the steroidogenesis and signaling pathways chronic stress and sleep disturbance are both associated with hyperactivity of the adrenal gland A resulting effect is increased glucocorticoid secretion inducing food intake and weight gain which in turn leads to insulin and leptin resistance These aspects are described in detail in this Research Topic by key investigators in the field Many of the aspects addressed in this Research Topic still represent a stimulus for future studies their outcome aimed at providing evidence of the central position occupied by the adrenal cortex in many metabolic functions when its homeostasis is disrupted An in depth investigation of the mechanisms underlying these pathways will be invaluable in developing new therapeutic tools and strategies

Dehydroepiandrosterone (DHEA) and Aging Francis L. Bellino,1995 This volume discusses the molecular basis for age dependent changes in DHEA levels with the aim of determining the potential value of DHEA as a diagnostic and therapeutic tool in age related disorders It provides an overview of the biosynthesis and metabolic physiology of DHEA as well as of its biochemical modes of action and possible roles in the immunologic senescence and atherogenesis that are associated with aging This book significantly furthers the understanding of the physiological role of DHEA throughout the aging process
