Cyber-Marx Nick Dyer-Witheford, 1999 In this highly readable and thought provoking work Nick Dyer Witheford assesses the relevance of Marxism in our time and demonstrates how the information age far from transcending the historic conflict between capital and its laboring subjects constitutes the latest battleground in their encounter Dyer Witheford maps the dynamics of modern capitalism showing how capital depends for its operations not just on exploitation in the immediate workplace but on the continuous integration of a whole series of social sites and activities from public health and maternity to natural resource allocation and the geographical reorganization of labor power He also shows how these sites and activities may become focal points of subversion and insurgency as new means of communication vital for the smooth flow of capital also permit otherwise isolated and dispersed points of resistance to connect and combine with one another Cutting through the smokescreen of high tech propaganda Dyer Witheford predicts the advent of a reinvented autonomist Marxism that will rediscover the possibility of a collective communist transformation of society Refuting the utopian promises of the information revolution he discloses the real potentialities for a new social order in the form of a twenty first century communism based on the common sharing of wealth

Impure Science Steven Epstein, 1996-12-09 In the short turbulent history of AIDS research and treatment the boundaries between scientist insiders and lay outsiders have been crisscrossed to a degree never before seen in medical history Steven Epstein's astute and readable investigation focuses on the critical question of how certainty is constructed or deconstructed leading us

through the views of medical researchers activists policy makers and others to discover how knowledge about AIDS emerges out of what he calls credibility struggles Epstein shows the extent to which AIDS research has been a social and political phenomenon and how the AIDS movement has transformed biomedical research practices through its capacity to garner credibility by novel strategies Epstein finds that nonscientist AIDS activists have gained enough of a voice in the scientific world to shape NIH sponsored research to a remarkable extent Because of the blurring of roles and responsibilities the production of biomedical knowledge about AIDS does not he says follow the pathways common to science indeed AIDS research can only be understood as a field that is unusually broad public and contested He concludes by analyzing recent moves to democratize biomedicine arguing that although AIDS activists have set the stage for new challenges to scientific authority all social movements that seek to democratize expertise face unusual difficulties Avoiding polemics and accusations Epstein provides a benchmark account of the AIDS epidemic to date one that will be as useful to activists policy makers and general readers as to sociologists physicians and scientists

human dignity Simon reflexively considers the basis on which teachers form their own dispositions and feelings and urges them to consider not only what they might do as teachers but what social visions are supported by their practices In this in depth discussion of the requirements for a pedagogy of possibility Simon highlights the significance of his theoretical commitment as applied to educational practice To illustrate the ways that pedagogy is implicated in the construction of a social imaginary Simon explores how the substance of schooling might be recast in a way that involves the work of teaching in reconstituting a progressive moral project for education that can constitute part of a broadly based social transformation He subsequently offers a social vision on which a pedagogy of possibility might be founded and shows how schools along with other sites of cultural production may be understood as integral to the struggle to establish such a vision In addition he discusses in detail how a practice of pedagogy might be conceptualized that would help establish concrete forms of hopeful practice

Newworkers Unite Catherine McKercher, 2002 Over the last forty years new technology and rapid concentration of ownership have caused fundamental changes in North American newspapers Newworkers unions have struggled to protect their members and to reinvent themselves to keep up with the

relentless pace of change in the workplace and recent strikes such as that of Seattle newspaper workers highlight the ongoing challenges. This engaging and accessible book focuses on how the Newspaper Guild, the main union for reporters and editors, adopted a strategy of labor convergence, joining with other media workers in the large and diverse Communications Workers of America union. McKercher also looks at the nationalism of Canadian newswriters who instead joined an all-Canadian union similar to CWA and explores a case study on an extreme form of labor convergence in Vancouver. She concludes that while labor convergence is a work in progress, it is a promising development for newswriters and their unions, helping them adjust to change and perhaps expand into new areas of the communication sector.
