

The background of the book cover is a Cosmic Microwave Background (CMB) fluctuation map. It shows a complex pattern of temperature variations across the sky, with warmer regions in shades of yellow and orange, and cooler regions in shades of blue and purple. The pattern is irregular and fractal-like, representing the early universe's density fluctuations.

Relativistic Astrophysics, 2 I. A. Zel'dovich, I. D. Novikov, 1971 Though the kinematics of the evolving universe became known decades ago research into the physics of processes occurring in the expanding universe received a reliable observational and theoretical basis only in more recent years These achievements have led in turn to the emergence of new problems on which an unusually active assault has begun This second volume of Relativistic Astrophysics provides a remarkably complete picture of the present state of cosmology It is a synthesis of the theoretical foundations of contemporary cosmology which are derived from work in relativity plasma theory thermodynamics hydrodynamics and particle physics It presents the theoretical work that explains describes and predicts the nature of the universe the physical process that occur in it the formation of galaxies the synthesis of the light elements and the cosmological singularity and the theory of gravitation This book long and eagerly awaited is essential for everyone whose work is related to cosmology and astrophysics

Relativistic Astrophysics and Cosmology Peter Hoyng, 2007-01-10 Relativistic Astrophysics and Cosmology offers a succinct and self contained treatment of general relativity and its application to compact objects gravitational waves and cosmology The required mathematical concepts are introduced informally following geometrical intuition as much as possible The approach is theoretical but there is ample discussion of observational aspects and of instrumental issues where appropriate The book includes such topical issues as the Gravity Probe B mission interferometer detectors of gravitational waves and the physics behind the angular power spectrum of the cosmic microwave background CMB Written for advanced undergraduates and beginning graduate students in astro physics it is ideally suited for a lecture course and contains 140 exercises with extensive hints The reader is assumed to be familiar with linear algebra and analysis ordinary differential equations special relativity and basic thermal physics

Relativistic Astrophysics Harald Riffert, Hanns Ruder, Hans-Peter Nollert, Friedrich W. Hehl, 2013-06-29 This book summarizes the lectures given at the 162 WE Heraeus Seminar which took place in the house of the German Physical Society in Bad Honnef in August 1996 Already the

number 162 shows the activity and effectiveness of the WE Heraeus Foundation We would like to express our thanks to Jutta Adam and Dr Volker Schafer for the almost incredibly simple and unbureaucratical procedure of funding organization and realization and of course to the founders Similar to the 152 WE Heraeus Seminar Relativity and Scientific Computing Springer Verlag 1996 this seminar was a joint venture of the Astronomical Society AG and of the Section Gravitation und Relativity Theory of the German Physical Society DPG Since Einstein has developed his Theory of General Relativity more than 80 years ago the situation has changed dramatically In the first decades main efforts were undertaken for a better understanding and for the experimental verification of the theory Mean while General Relativity GR is one of the experimentally best confirmed theories with 13 an accuracy better than 10 Consequently GR has become a powerful tool for the investigation of cosmic processes where strong gravitational fields are involved The state of the art of our knowledge is summarized by Jiirgen Ehlers in the first chapter An impressive example of the change of the situation is the gravitational light deflection

Relativistic Astrophysics Marek Demiański, 2013-10-22 Relativistic Astrophysics brings together important astronomical discoveries and the significant achievements as well as the difficulties in the field of relativistic astrophysics This book is divided into 10 chapters that tackle some aspects of the field including the gravitational field stellar equilibrium black holes and cosmology The opening chapters introduce the theories to delineate gravitational field and the elements of relativistic thermodynamics and hydrodynamics The succeeding chapters deal with the gravitational fields in matter stellar equilibrium and general relativity stability and the properties of pulsar rotating and neutron stars The discussion then shifts to the association between gravitational collapse and black holes as well as the astrophysical investigations of neutron stars and black holes The final chapters examine the principles of gravitational waves and advances in understanding the field of cosmology This book will be of great value to astrophysicists and related scientists

Basic Concepts In Relativistic Astrophysics Lizhi Fang, Remo Ruffini, 1983-12-01 In this book the interesting results of similar works carried out by both authors independently is presented in a unique manner This book is written as a token of exchange between the East and the West and it is hoped that it will lead to greater cooperation between the scientists

General Relativity and Relativistic Astrophysics Norbert Straumann, 2012-12-06 In 1979 I gave graduate courses at the University of Zurich and lectured in the Troisieme Cycle de la Suisse Romande a consortium of four universities in the french

speaking part of Switzerland and these lectures were the basis of the Springer Lecture Notes in Physics Volume 150 published in 1981 This text appeared in German because there have been few modern expositions of the general theory of relativity in the mother tongue of its only begetter Soon after the book appeared W Thirring asked me to prepare an English edition for the Texts and Monographs in Physics Fortunately E Borie agreed to translate the original German text into English An excellent collaboration allowed me to revise and add to the contents of the book I have updated and improved the original text and have added a number of new sections mostly on astrophysical topics In particular in collaboration with M Camenzind I have included a chapter on spherical and disk accretion onto compact objects This book divides into three parts Part I develops the mathematical tools used in the general theory of relativity Since I wanted to keep this part short but reasonably self contained I have adopted the dry style of most modern mathematical texts Readers who have never before been confronted with differential geometry will find the exposition too abstract and will miss motivations of the basic concepts and constructions
